| Withdrawable units   |                          |      |   |
| Black  |                          | mm   | 2 x 5 x 80  |
|  |                          |      | These are values used in separate switchgear. The actual values will depend on<br>the temperature around the circuit-breaker, which is influenced by the ambient<br>temperature, the degree of protection (IP), the mounting height, the partitions, and<br>any external ventilation. Depending on the specific switchgear design, this may |
|  |                          |      | result in derating, which can then be compensated for by increasing the cross-  |

sectional area. Temperature rise tests in the specific switchgear can provide specific and detailed information.

Permissible continuous current for circuit-breakers operating in switchboards at various internal ambient temperatures. The switchboard's internal ambient temperature should be estimated using the calculation methods of IEC regulation.

## Design verification as per IEC/EN 61439

| Technical data for design verification  |                  |    |  |
|---|------------------|----|--|
| Rated operational current for specified heat dissipation  | In               | А  | 1250   |
| Equipment heat dissipation, current-dependent   | P <sub>vid</sub> | W  | 180  |
| Operating ambient temperature min.  |                  | °C | -20  |
| Operating ambient temperature max.  |                  | °C | 70   |
| IEC/EN 61439 design verification  |                  |    |  |
| 10.2 Strength of materials and parts  |                  |    |  |
| 10.2.2 Corrosion resistance   |                  |    | Meets the product standard's requirements.   |
| 10.2.3.1 Verification of thermal stability of enclosures  |                  |    | Meets the product standard's requirements.   |
| 10.2.3.2 Verification of resistance of insulating materials to normal heat  |                  |    | Meets the product standard's requirements.   |
| 10.2.3.3 Verification of resistance of insulating materials to abnormal heat<br>and fire due to internal electric effects |                  |    | Meets the product standard's requirements.   |
| 10.2.4 Resistance to ultra-violet (UV) radiation  |                  |    | Meets the product standard's requirements.   |
| 10.2.5 Lifting  |                  |    | Does not apply, since the entire switchgear needs to be evaluated.   |
| 10.2.6 Mechanical impact  |                  |    | Does not apply, since the entire switchgear needs to be evaluated.   |
| 10.2.7 Inscriptions   |                  |    | Meets the product standard's requirements.   |
| 10.3 Degree of protection of ASSEMBLIES   |                  |    | Does not apply, since the entire switchgear needs to be evaluated.   |
| 10.4 Clearances and creepage distances  |                  |    | Meets the product standard's requirements.   |
| 10.5 Protection against electric shock  |                  |    | Does not apply, since the entire switchgear needs to be evaluated.   |
| 10.6 Incorporation of switching devices and components  |                  |    | Does not apply, since the entire switchgear needs to be evaluated.   |
| 10.7 Internal electrical circuits and connections   |                  |    | Is the panel builder's responsibility.   |
| 10.8 Connections for external conductors  |                  |    | Is the panel builder's responsibility.   |
| 10.9 Insulation properties  |                  |    |  |
| 10.9.2 Power-frequency electric strength  |                  |    | Is the panel builder's responsibility.   |
| 10.9.3 Impulse withstand voltage  |                  |    | Is the panel builder's responsibility.   |
| 10.9.4 Testing of enclosures made of insulating material  |                  |    | Is the panel builder's responsibility.   |
| 10.10 Temperature rise  |                  |    | The panel builder is responsible for the temperature rise calculation. Eaton will provide heat dissipation data for the devices. |
| 10.11 Short-circuit rating  |                  |    | Is the panel builder's responsibility. The specifications for the switchgear must be observed.                                   |
| 10.12 Electromagnetic compatibility   |                  |    | Is the panel builder's responsibility. The specifications for the switchgear must be observed.                                   |
| 10.13 Mechanical function   |                  |    | The device meets the requirements, provided the information in the instruction leaflet (IL) is observed.                         |
