

Product Change Notification

ENCODERS

September, 2014 -

REVISED DECEMBER 23, 2014

Bourns® Model PEC11R, PEC12R and PEC11L 11 mm Rotary Contacting Encoders

Changes to Packaging Tray and Minimum/Multiple Ordering Quantities

In line with our goal for continuous improvement, Sensors & Controls is pleased to announce packaging improvements for Model [PEC11R](#), [PEC12R](#) and [PEC11L](#) Rotary Contacting Encoders. The current multipart cell packaging will be phased out and replaced by sturdy trays supporting individual parts (see Figures 1 and 2). The improved packaging design provides a more secure fit for the model and increased stability in the shipping and handling process.

The change in packaging will affect the minimum order quantity (MOQ) and multiple ordering quantities (MULT). For your convenience, Table 1 lists the affected part numbers and the corresponding old and new MOQ/MULT quantities.

This change in packaging does not impact the form, fit, or function of the components.

Figure 1 - Old Cell Tray Packaging

Figure 2 - New Tray Packaging

Implementation dates are as follows:

*Bourns will begin phasing in this process: **November 24, 2014***

*Date that deliveries of modified tray packaging will begin: **November 24, 2014***

*Current packaging will be phased out: **November 24, 2014***

Should you have any questions or need additional information, please feel free to contact [Customer Service/ Inside Sales](#).
