CAUTIONS FOR USE

Regarding fastening of switch body

In fastening the switch body, use M4 mounting screws to attach switches with the torque 1.5 N·m or less.

Soldering operations

Soldering should be done in less than 5 seconds, with iron (tip temperature 350°C max.). Care should be taken not to apply force to the terminal during soldering.

Panel mount type

- 1) When mounting the panel, tighten the hex nut for actuator to less than 4.0 N·m.
- 2) Mounting hole dimensions are as shown below.

Environment

Avoid using and storing these switches in a location where they will be exposed to corrosive gases, silicon, or high dust levels, all of which can have an adverse effect on the contacts.
