** Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance. Please contact SMC regarding water resistant types with the above model numbers.

* Lead wire length symbols: 0.5 m..... — (Example) M9NW * Solid state auto switches marked with "○" are produced upon receipt of order.
 1 m..... M (Example) M9NWM
 3 m..... L (Example) M9NWL
 5 m..... Z (Example) M9NWZ

* For details about auto switches with pre-wired connector, refer to the **Auto Switch Guide**.
 * Auto switches are shipped together, (but not assembled).

Symbol

Rubber bumper

Refer to pages 10 and 11 for cylinders with auto switches.

- Auto switch proper mounting position (detection at stroke end) and mounting height
- Minimum stroke for auto switch mounting
- Operating range
- Auto switch mounting

Specifications

Bore size [mm]	Ø 12 (Ø 10 x 2)	Ø 16 (Ø 12 x 2)	Ø 20 (Ø 16 x 2)	Ø 25 (Ø 20 x 2)	Ø 32 (Ø 25 x 2)	Ø 40 (Ø 32 x 2)	Ø 50 (Ø 40 x 2)	Ø 63 (Ø 45 x 2)	Ø 80 (Ø 56 x 2)	Ø 100 (Ø 71 x 2)
Action	Double acting									
Fluid	Air									
Proof pressure	1.05 MPa									
Maximum operating pressure	0.7 MPa*1									
Minimum operating pressure	0.15 MPa									
Ambient and fluid temperature	5 to 60 °C									
Piston speed (Note)*	50 to 300 mm/s*1								50 to 250 mm/s*1	
Cushion	Rubber bumper on both ends									
Lubrication	Not required (Non-lube)									
Stroke length tolerance	$^{+1.5}_0$ mm									

Note) Maximum speed with no load

- * Depending on the system configuration selected, the specified speed may not be satisfied.
- *1 Maximum operating pressure and piston speed are different from the current product (MGP series).

Standard Strokes

Bore size [mm]	Standard stroke [mm]

Caution on Proximity Installation

When cylinders are adjacent to one another as shown in the figure below, provide a space between them of at least, the amount shown in the tables below.

If the space is not sufficient, the magnets in adjacent cylinders may cause the auto switches to malfunction.

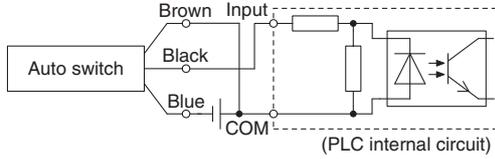

Bore size	Allowable interval [mm]
Ø 12 (Ø 10 x 2)	15
Ø 16 (Ø 12 x 2)	15
Ø 20 (Ø 16 x 2)	15
Ø 25 (Ø 20 x 2)	10
Ø 32 (Ø 25 x 2)	5
Ø 40 (Ø 32 x 2)	0
Ø 50 (Ø 40 x 2)	0
Ø 63 (Ø 45 x 2)	0
Ø 80 (Ø 56 x 2)	0
Ø 100 (Ø 71 x 2)	0

Prior to Use

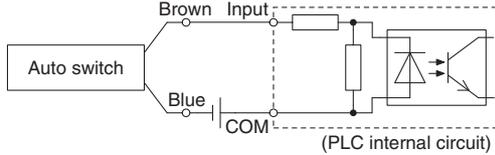

Auto Switch Connection and Example

Sink Input Specifications

3-wire, NPN

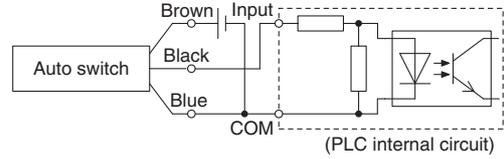

2-wire

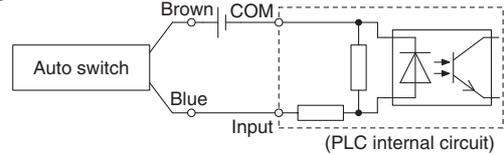

Source Input Specifications

3-wire, PNP

2-wire

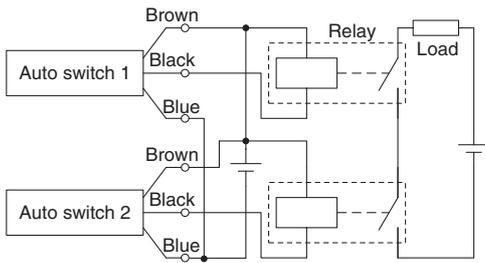

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

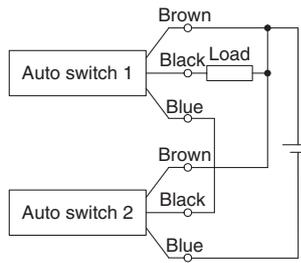

Example of AND (Series) and OR (Parallel) Connection

* When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid.

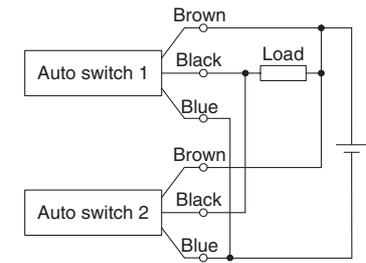

3-wire AND connection for NPN output (Using relays)

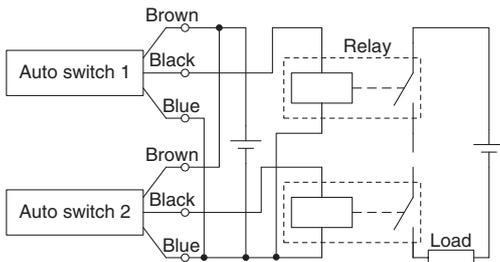

(Performed with auto switches only)

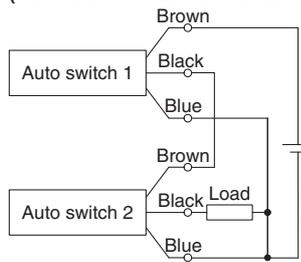

3-wire OR connection for NPN output

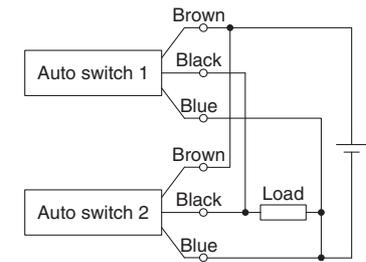

3-wire AND connection for PNP output (Using relays)

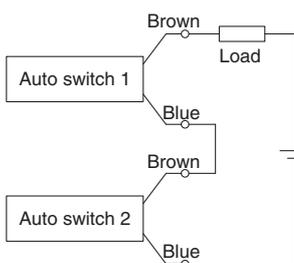

(Performed with auto switches only)

3-wire OR connection for PNP output

2-wire AND connection

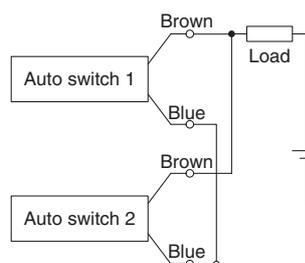

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with load voltage less than 20 V cannot be used.

$$\begin{aligned} \text{Load voltage at ON} &= \text{Power supply voltage} - \text{Residual voltage} \times 2 \text{ pcs.} \\ &= 24 \text{ V} - 4 \text{ V} \times 2 \text{ pcs.} \\ &= 16 \text{ V} \end{aligned}$$

Example: Power supply is 24 V DC
Internal voltage drop in auto switch is 4 V.

2-wire OR connection

(Solid state)
When two auto switches are connected in parallel, malfunction may occur because the load voltage will increase when in the OFF state.

(Reed)
Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

$$\begin{aligned} \text{Load voltage at OFF} &= \text{Leakage current} \times 2 \text{ pcs.} \times \text{Load impedance} \\ &= 1 \text{ mA} \times 2 \text{ pcs.} \times 3 \text{ k}\Omega \\ &= 6 \text{ V} \end{aligned}$$

Example: Load impedance is 3 k Ω .
Leakage current from auto switch is 1 mA.

JMGP Series

Specific Product Precautions 1

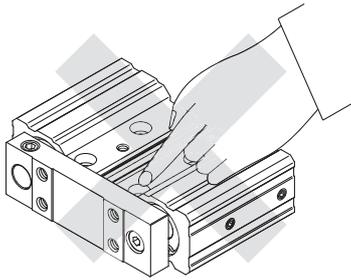

Be sure to read this before handling the products. Refer to the back cover for Safety Instructions. For Actuator and Auto Switch Precautions, refer to “Handling Precautions for SMC Products” and the Operation Manual on SMC website, <http://www.smc.eu>

Mounting

Warning

1. Never place your hands or fingers between the plate and the body.

Be very careful to prevent your hands or fingers from getting caught in the gap between the cylinder body and the plate when air is applied.

Caution

1. Use cylinders within the piston speed range.

An orifice is set for this cylinder, but the piston speed may exceed the operating range if the speed controller is not used. If the cylinder is used outside the operating speed range, it may cause damage to the cylinder and shorten the service life. Adjust the speed by installing the speed controller and use the cylinder within the limited range.

2. Pay attention to the operating speed when the product is mounted vertically.

When using the product in the vertical direction, if the load factor is large, the operating speed can be faster than the control speed of the speed controller (i.e. quick extension). In such cases, it is recommended to use a dual speed controller.

3. Do not scratch or gouge the sliding portion of the piston rod.

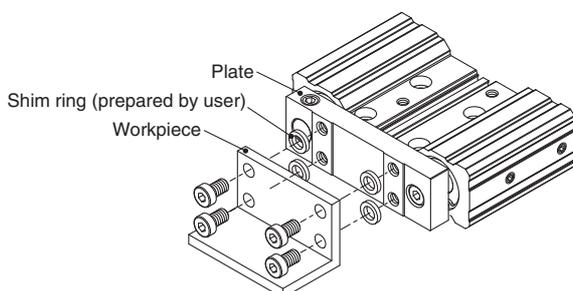

Damaged seals etc. will result in leakage or malfunction.

4. Do not dent or scratch the mounting surface of the body and the plate.

The flatness of the mounting surface may not be maintained, which would cause an increase in sliding resistance.

5. Make sure that the cylinder mounting surface has a flatness of 0.05 mm or less.

If the flatness of the workpieces and brackets mounted on the plate is not appropriate, sliding resistance may increase. If it is difficult to maintain a flatness of 0.05 or less, put a thin shim ring (prepared by user) between the plate and workpiece mounting surface to prevent the sliding resistance from increasing.

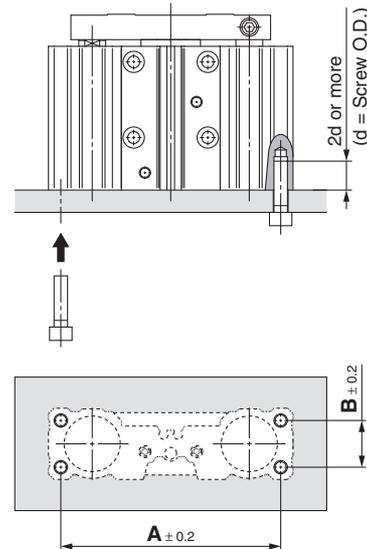

Mounting

Caution

6. Bottom of cylinder

For bottom mounting, make a hole to the mounting base of the customer for hexagon socket head cap screws.

Bore size [mm]	A [mm]	B [mm]	Hexagon socket head cap screw
Ø 12 (Ø 10 x 2)	52	11	M3 x 0.5
Ø 16 (Ø 12 x 2)	57	11	M4 x 0.7
Ø 20 (Ø 16 x 2)	75	14	M4 x 0.7
Ø 25 (Ø 20 x 2)	84	17	M5 x 0.8
Ø 32 (Ø 25 x 2)	98	21	M6 x 1.0
Ø 40 (Ø 32 x 2)	107	27	M8 x 1.25
Ø 50 (Ø 40 x 2)	135	37	M8 x 1.25
Ø 63 (Ø 45 x 2)	146	40	M10 x 1.5
Ø 80 (Ø 56 x 2)	184	50	M12 x 1.75
Ø 100 (Ø 71 x 2)	219	62	M14 x 2

7. Depending on the system configuration selected, the specified speed may not be satisfied.

Other

Caution

This product should not be used as a stopper.

Piping

⚠ Caution

Depending on the operating conditions, piping port positions can be changed by using a plug. When switching the plugged port, check for the air leakage. If small air leakage is detected, order the below plugs, and reassemble it.

Plug Part Number

Bore size [mm]	Part number	Port thread type	Quantity*
Ø 12 (Ø 10 x 2) Ø 16 (Ø 12 x 2)	P-M3	M3	8
Ø 20 (Ø 16 x 2) Ø 25 (Ø 20 x 2) Ø 32 (Ø 25 x 2)	P-M5	M5	8
Ø 40 (Ø 32 x 2) Ø 50 (Ø 40 x 2) Ø 63 (Ø 45 x 2)	P-R1	Rc 1/8	8
	P-N1	NPT 1/8	8
	P-G1	G 1/8	8
Ø 80 (Ø 56 x 2) Ø 100 (Ø 71 x 2)	P-R2	Rc 1/4	8
	P-N2	NPT 1/4	8
	P-G2	G 1/4	8

* 1 set includes 8 pieces.

In addition, when reassembling the replacement plug, apply grease slightly to the whole circumference of the female thread of the port. (M3, M5 type only)

Use SMC's recommended grease.

Grease pack part number: GR-S-010 (10 g)

M3, M5, Rc port, NPT port

Use the correct tightening torques listed below.

Connection thread (plug) size	Proper tightening torque [N·m]	Dimension "a"
M3	0.65 to 0.75	—
M5	3.2 to 3.8	—
1/8	3.5 to 5.5	1 mm or less
1/4	6.5 to 12	1 mm or less

G port

Screw in the plug to the surface of the body (dimension "a" in the drawing) by checking visually instead of using the tightening torque shown above.
