Integrated 802.11 a/b/g/n/ac WLAN, Bluetooth & BLE Module

FEATURES

- IEEE 802.11 a/b/g/n/ac (single stream n)
- Typical WLAN Transmit Power:
  - +16 dBm, 11 Mbps, CCK (b)
  - +13 dBm, 54 Mbps, OFDM (g)
  - +11 dBm, HT20 MCS7 (n)
- Typical WLAN Sensitivity:
  - -87 dBm, 8% PER,11 Mbps (b)
  - -73 dBm, 10% PER, 54 Mbps (g)
  - -71 dBm, 10% PER, MCS7 (n)
- Bluetooth 2.1+EDR, Bluetooth 3.0, Bluetooth 4.2 (Bluetooth Low Energy)
- WLAN and Bluetooth coexistence
- Available in two footprint styles:
  - Easy to Integrate: 15.5 mm x 21 mm
  - Miniature footprint: 10 mm x 10 mm
- Available with integrated chip antenna or U.FL connector for external antenna
- Operating voltage: VBAT = 3.20V to 3.60V VDDIO = 1.71V to 1.89V
- Operating temperature: -40 to +85º C
- Compact design based on Cypress BCM43353 SoC
- Worldwide acceptance: FCC (USA), IC (Canada), ETSI (Europe), Giteki (Japan), and RCM (AU/NZ)
  Note: All certifications are currently pending. When completed this statement will be removed.
  BT SIG QDID: coming soon
- REACH and RoHS compliant

APPLICATIONS

- Security & Building Automation
- Internet of Things / M2M Connectivity
- Smart Gateways

DESCRIPTION

The Sterling-LWB5 is a high performance 2.4 GHz and 5 GHz WLAN and Bluetooth Smart Ready combo module based on latest-generation silicon (Cypress's BCM43353). With an industrial temperature rating, broad country certifications, and the availability of two different package styles, the Sterling-LWB5 provides significant flexibility to meet various end user application needs.

The on-module chip antenna package style for the Sterling-LWB5 eliminates complexity for design integration, simplifies manufacturing assembly with larger pin outs, and features an advanced chip antenna that offers greater resistance to de-tuning than typical trace or chip antennas.

The module includes the MAC, Baseband and Radio to support WLAN applications and an independent, high-speed UART is provided for the Bluetooth host interface. In addition, the latest Linux and Android drivers are supported directly by LSR and Cypress. Need to get to market quickly? Not an expert in 802.11. Need a custom antenna? Would you like to own the design? Would you like a custom design? Not quite sure what you need? Do you need help with your host board? LSR Design Services will be happy to develop custom hardware or software, or assist with integrating the design. Contact us at sales@lsr.com or call us at 262-375-4400.

MODULE VARIANTS

The LSR Sterling-LWB5 Module is available in three different versions. Depending on the user's antenna and footprint needs, there is a variant to suite most application requirements. LSR recommends that for simplicity of both the host PCB design, as well as the manufacturing process, that either the Chip Antenna or RF Connector version of the modules be used in your design.

- **450-0162 - Base SIP Module**
  This module variant is supplied in a compact, 84 pin, LGA footprint. Unlike the other module variants, it requires the addition of either an off module antenna or RF connector, as well as the associated matching components. In order to benefit from the EMC certifications on the module, strictly following the layout in the module application guide is required. This requires adherence to the PCB stack-up and layout around the antenna. The footprint of this module may require additional care during reflow and PCB assembly.

Figure 1 Sterling-LWB5 Base SIP Module (450-0162)

The information in this document is subject to change without notice.

- **450-0168 – U.FL Module**
  This module variant integrates the 450-0162 Base SIP Module, a U.FL RF connector, and all associated RF matching components on a PCB. This integrated approach not only provides a U.FL connector for connections to external antennas, but also simplifies and reduces the cost of the end users host board by simplifying the module PCB footprint.
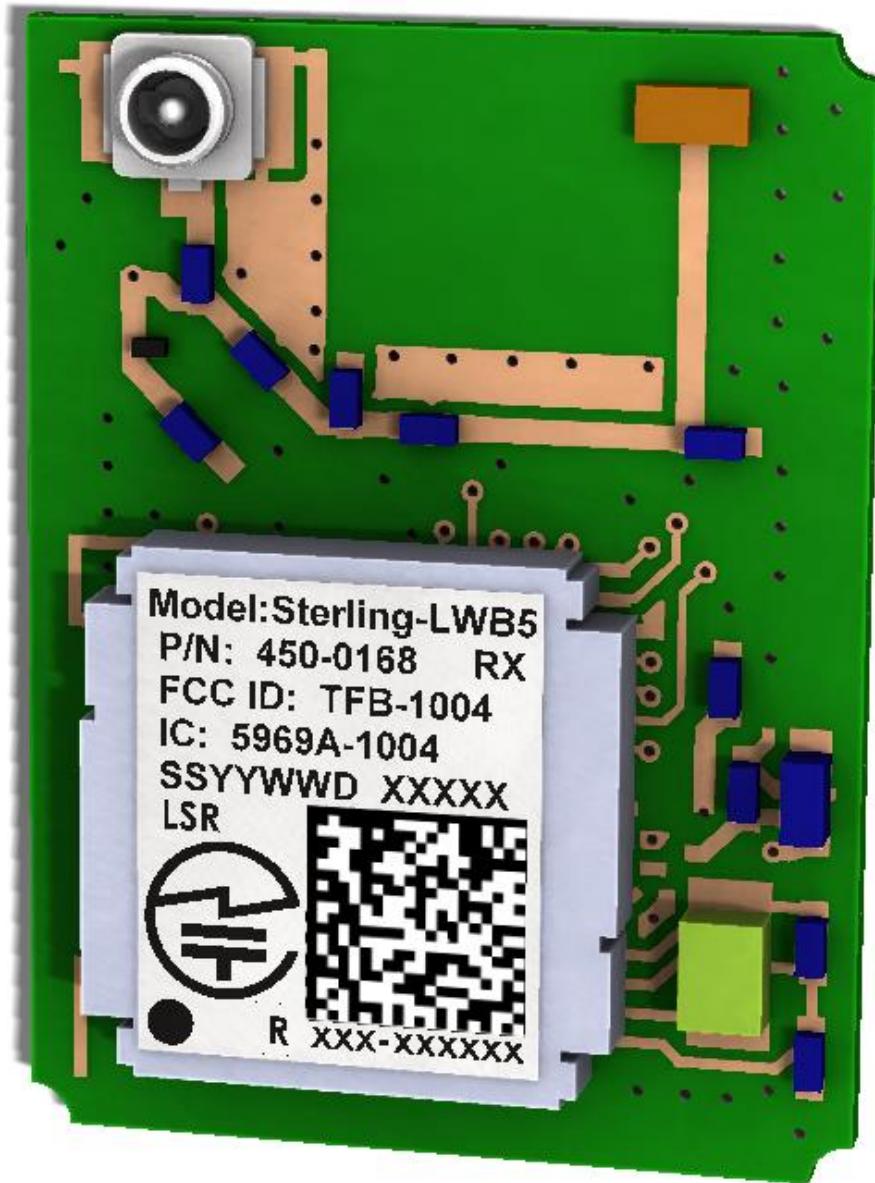

Figure 2 Sterling-LWB5 U.FL Module (450-0168)

- **450-0169 - Chip Antenna Module**
  This module variant integrates the 450-0162 Base SIP Module, a chip antenna, and all associated RF matching components on a PCB. This integrated approach not only provides an external antenna solution, but also simplifies and reduces the cost of the end users host board by simplifying the module PCB footprint

FUNCTIONAL FEATURES

WLAN Features

- IEEE802.11 a/b/g/n/ac 1x1 2.4 GHz Radio
  - Internal Power Amplifier (PA)
  - Internal Low Noise Amplifier(LNA)
  - Internal T/R Switch
  - Simultaneous BT/WLAN reception with a single antenna.
- Media Access Controller (MAC)
- Physical Layer (PHY)
- Baseband Processor
- **Standards**
  - IEEE 802.11a, 802.11b, 802.11g, 802.11n (single stream), 802.11ac

Bluetooth Features

- Class 2 power amplifier with Class 2 capability
- HCI Interface using High Speed UART
- PCM for Audio Data
- **Standards**
- Bluetooth 2.1+EDR, Bluetooth 3.0, Bluetooth 4.2 (Bluetooth Low Energy)

Wireless Security System Features

- **Supported modes:**
  - Open (no security)
  - WEP
  - WPA Personal
  - WPA2 Personal
  - WMM
  - WMM-PS (U-APSD)
  - WMM-SA
  - WAPI
  - AES (Hardware Accelerator)
  - TKIP (host-computed)
  - CKIP (SW Support)

Table 4 Sterling-LWB5 U.FL and Chip Antenna Module Pin Descriptions

MODULE POWER STATES

The Sterling-LWB5 WLAN power states are described as follows:

• **Active mode** - All WLAN blocks in the Sterling-LWB5 are powered up and fully functional with active carrier sensing and frame transmission and receiving. All required regulators are enabled and put in the most efficient mode based on the load current. Clock speeds are dynamically adjusted by the PMU sequencer.

• **Doze mode** - The radio, analog domains, and most of the linear regulators are powered down. The rest of the BCM43353 remains powered up in an IDLE state. All main clocks (PLL, crystal oscillator) are shut down to reduce active power to the minimum. The 32.768 kHz LPO clock is available only for the PMU sequencer. This condition is necessary to allow the PMU sequencer to wake up the chip and transition to Active mode. In Doze mode, the primary power consumed is due to leakage current.

• **Deep-sleep mode** - Most of the chip, including both analog and digital domains, and most of the regulators are powered off. Logic states in the digital core are saved and preserved into a retention memory in the always-ON domain before the digital core is powered off. Upon a wake-up event triggered by the PMU timers, an external interrupt, or a host resume through the SDIO bus, logic states in the digital core are restored to their pre-deep-sleep settings to avoid lengthy HW reinitialization.

• **Power-down mode** - The BCM43353 is effectively powered off by shutting down all internal regulators. The chip is brought out of this mode by external logic re-enabling the internal regulators.

MODULE PIN I/O STATES

Pin #		Name	Keeper (b)	Active Mode	Low Power State/Sleep (All Power Present)	Power Down(c) WL_REG_ON =0 BT_REG_ON = 0	Out of Reset: (VDD_VIO is present)

Table 5 I/O States

The following notations are used:
- I = Input signal
- O = Output signal
- I/O = Input/Output signal
- PU = Pulled Up
- PD = Pulled Down
- NoPull = Neither pulled up nor pulled down

Notes:
a. PU = Pulled Up, PD = Pulled Down.
b. N = pad has no keeper. Y = pad has a keeper. Keeper is always active except in the power-down state. If there is no keeper, and it is an input and there is NoPull, then the pad should be driven to prevent leakage due to floating pad, for example, SDIO_CLK.
c. In the Power-down state (xx_REG_ON = 0): High-Z; NoPull => The pad is disabled because power is not supplied.
d. Depending on whether the PCM interface is enabled and the configuration is master or slave mode, it can be either an output or input.
e. Depending on whether the I2S interface is enabled and configuration is master or slave mode, it can be either an input or output.
f. The GPIO pull states for the active and low-power states are hardware defaults. They can all be subsequently programmed as a pull-up or pull-down.

Power Supply Sequencing

WLAN Boot-Up Sequence
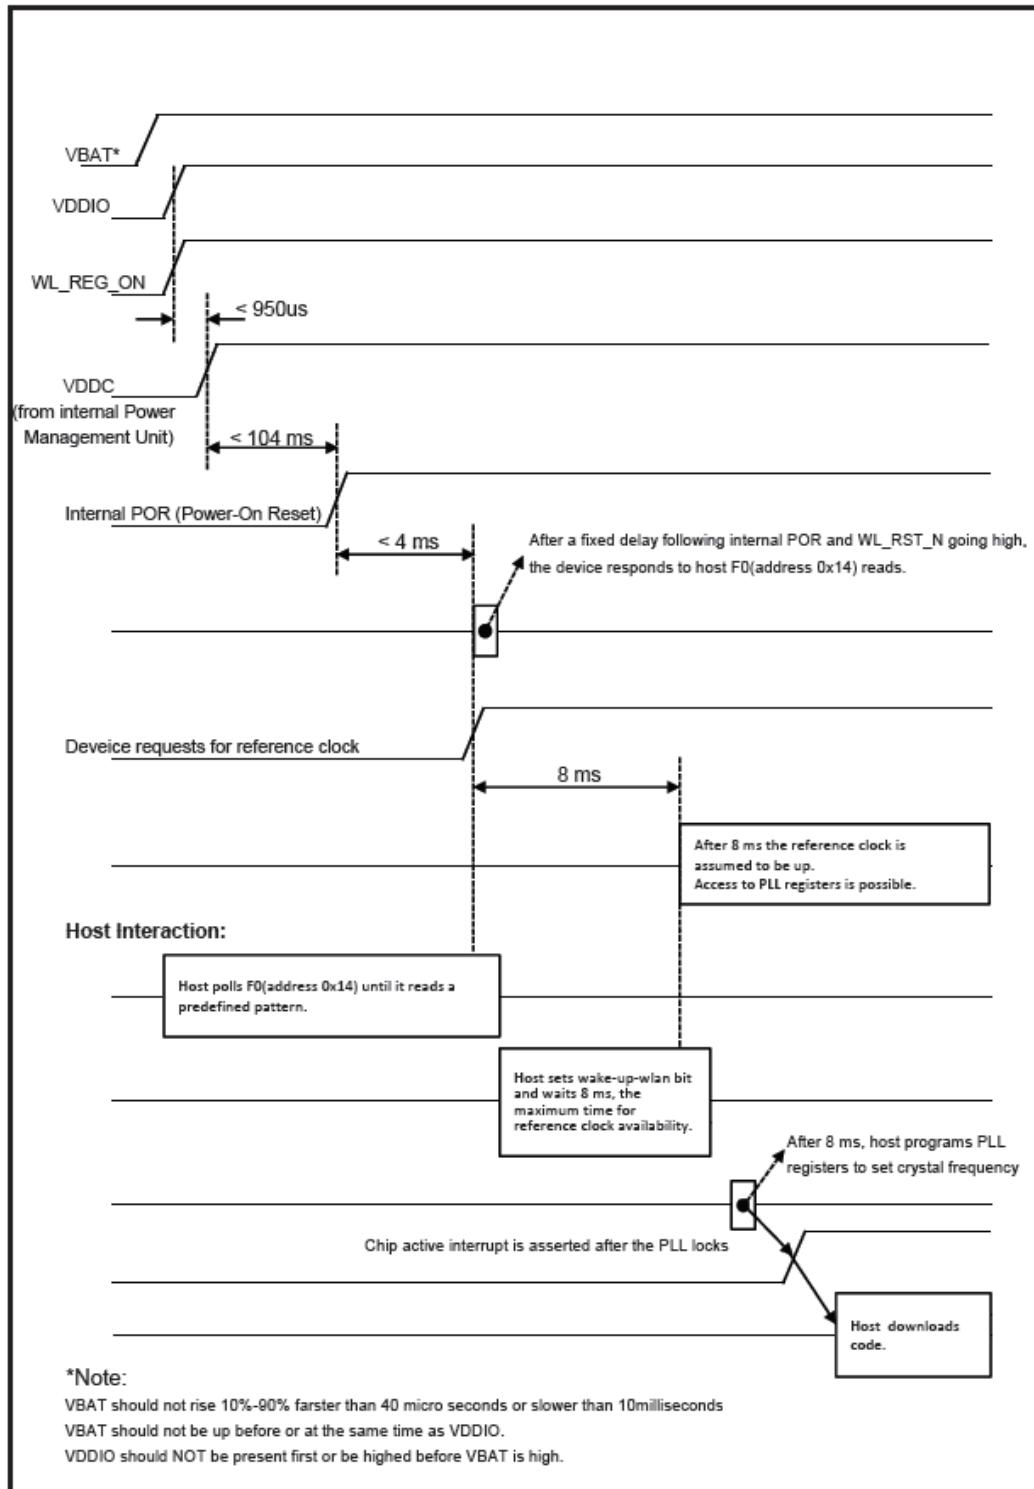

**Figure 9 WLAN Boot-Up Sequence**

Figure 10 Bluetooth Boot-UP Sequence

Control Signal Sequencing

The Sterling-LWB5 has two signals that allow host to control power consumption by enabling or disabling the WLAN, Bluetooth and internal regulator blocs. The timing values indicated are minimum required values; longer delays are also acceptable.

• WL_REG_ON: Used by the Power Management Unit (PMU) to power up the WLAN section. It is also OR-gated with the BT_REG_ON input to control the internal DWM-W097 regulators. When this pin is high, the regulators are enabled and the WLAN section is out of reset. When this pin is low the WLAN section is in reset. If both WL_REG_ON and BT_REG_ON pins are low, the regulators are disabled.

• BT_REG_ON: Used by the Power Management Unit (PMU) (OR-gated with WL_REG_ON) to power up the internal DWM-W097 regulators. If both the BT_REG_ON and WL_REG_ON pins are low, the regulators are disabled. When this pin is low the Bluetooth section is in reset.

Note:
For both pins, there should be at least a 10ms time delay between consecutive toggles (when both signals have been driven low). This is to allow timer for the CBUCK regulator to discharge. If this delay is not followed, then there may be a VDDIO in-rush current on the order of 36mA during next PMU cold start. The Sterling-LWB5 has an internal power on reset (POR) circuit. The device will be held in reset for a maximum of 110ms after VBAT and VDDIO have both passed the POR threshold. Wait at least 150ms after VBAT and VDDIO are available before initiating SDIO access.

Calibration Current Profile

Although the Max continuous supply current to the module is <320 mA, when providing power to the module, a power source capable of supplying 750 mA peak current for a duration of ~20 msec is required by the module transmitter during calibration.

Figure 11 shows the current profile of the Sterling-LWB5 module during calibration. If current is limited to <750mA during this process, the module will fail to calibrate.

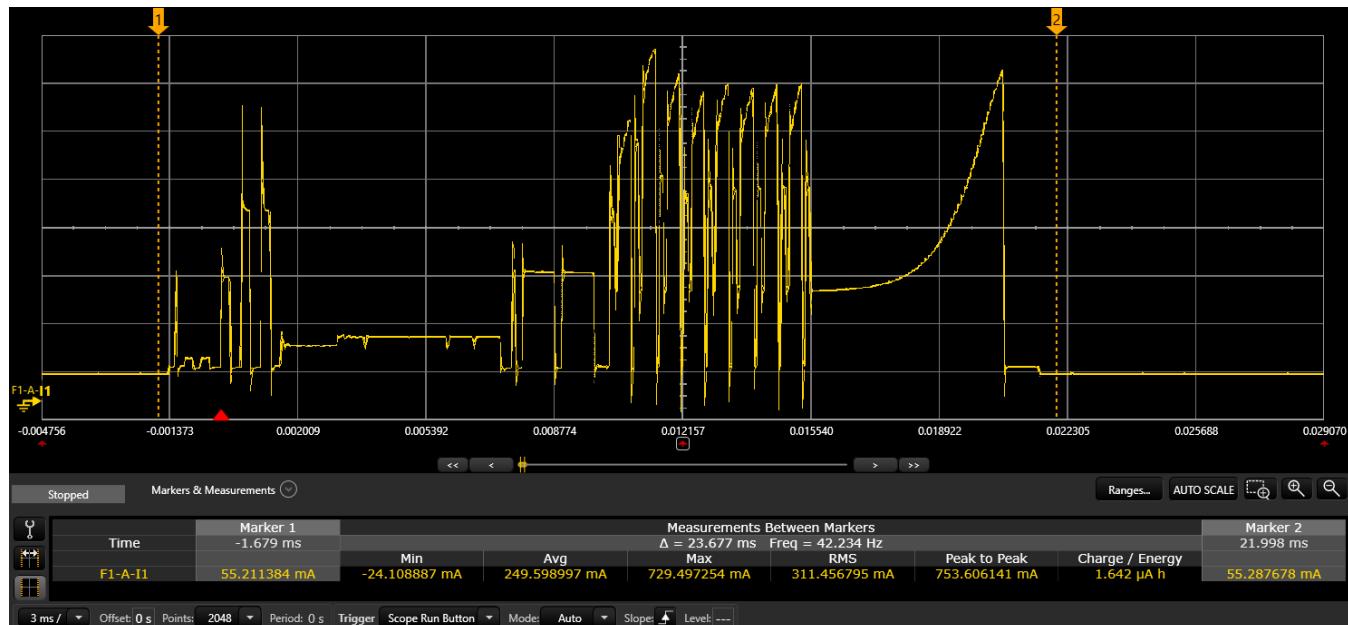

Figure 11 Module RF Calibration Current Profile

CRYSTAL OSCILLATOR REQUIREMENTS

32.768 KHz Oscillator	
Frequency Accuracy	± 200 ppm
Duty Cycle	30% - 70%
Input Signal Amplitude	200 – 3300 mV, p-p
Signal Type	Square or Sine Wave
Clock Jitter	<10,000 ppm

Table 14 Oscillator Requirements

Note: A 32.768 KHz crystal is required in order for the module to be fully functional. The module will not boot without it.

BLUETOOTH UART HOST INTERFACE

Overview

The Sterling-LWB5 uses a single UART for Bluetooth. The UART is a standard 4-wire interface (RX, TX, RTS, and CTS) with adjustable baud rates from 9600 bps to 4.0 Mbps. The interface features an automatic baud rate detection capability that returns a baud rate selection. Alternatively, the baud rate may be selected through a vendor-specific UART HCI command. The UART also supports the 3-wire *UART Transport Layer* which reduces the number of signal lines required by eliminating the CTS and RTS signals.
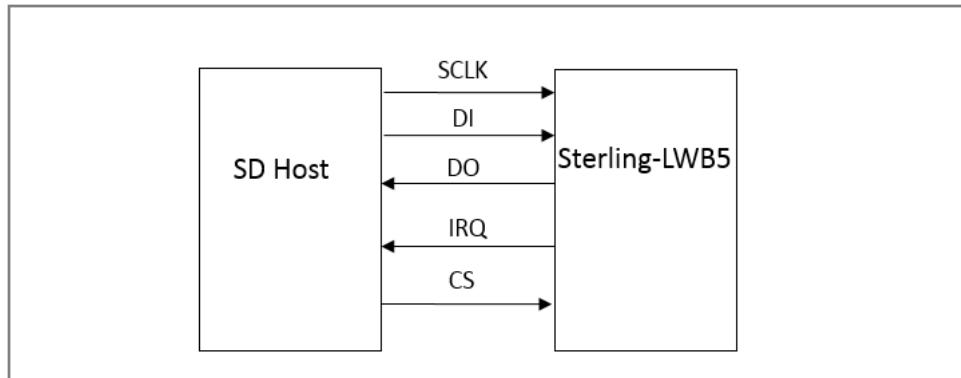

Figure 19 UART Connection from Sterling-LWB5 to Host

DC Characteristics – SDO Interface Pins

Parameter	Test Conditions	Min	Typ	Max	Unit
Input high voltage	VDDIO = 1.8V	1.7	-		V
Input low voltage	VDDIO = 1.8V	-	-	0.63	V
Output high voltage @2mA	VDDIO = 1.8V	1.4	-		V
Output low voltage @2mA	VDDIO = 1.8V	-	-	0.45	V

Sterling-LWB5 Module
Datasheet
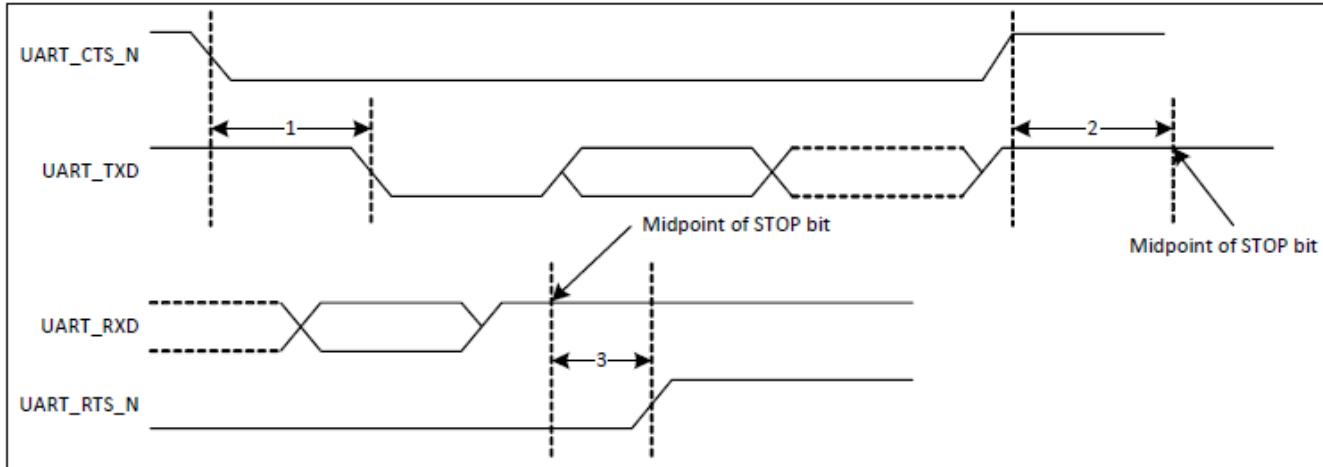

Soldering Recommendations

Reflow for Lead Free Solder Paste

- Optimal solder reflow profile depends on solder paste properties and should be optimized as part of an overall process development.
- It is important to provide a solder reflow profile that matches the solder paste supplier's recommendations.
- Temperature ranges beyond that of the solder paste supplier's recommendation could result in poor solderability.
- All solder paste suppliers recommend an ideal reflow profile to give the best solderability.

Recommended Reflow Profile for Lead Free Solder
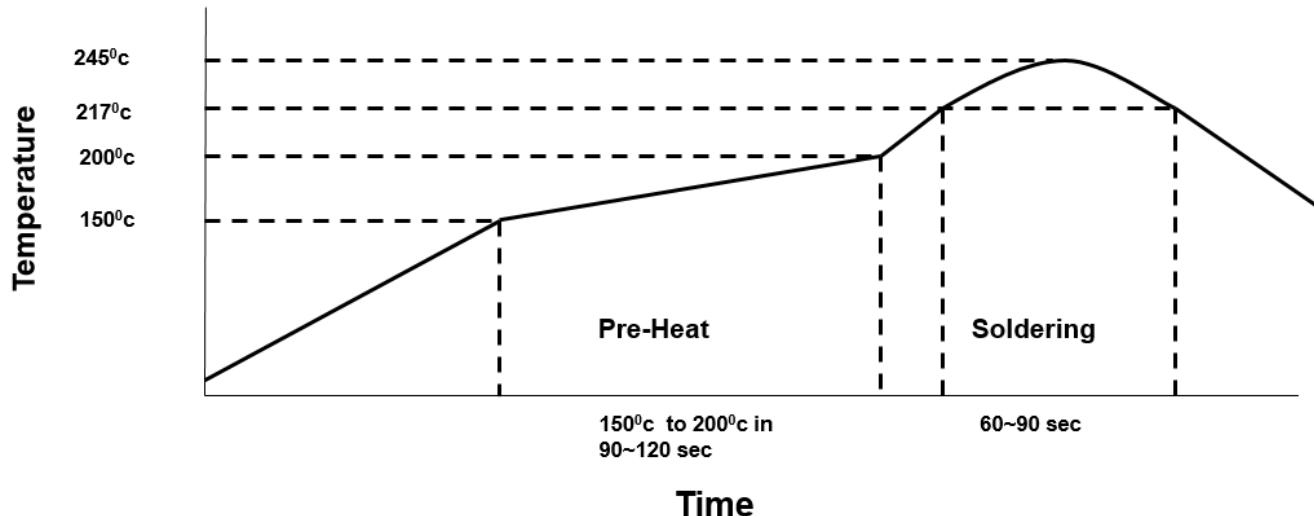

Figure 21 Recommended Soldering Profile

Note: The quality of solder joints on the surface mount pads where they contact the host board should meet the appropriate IPC Specification. See IPC-A-610-D Acceptability of Electronic Assemblies, section 8.2.1 "Bottom Only Terminations."

The information in this document is subject to change without notice.

CLEANING

In general, cleaning the populated modules is strongly discouraged. Residuals under the module cannot be easily removed with any cleaning process.

- Cleaning with water can lead to capillary effects where water is absorbed into the gap between the host board and the module. The combination of soldering flux residuals and encapsulated water could lead to short circuits between neighboring pads. Water could also damage any stickers or labels.

- Cleaning with alcohol or a similar organic solvent will likely flood soldering flux residuals into the RF shield, which is not accessible for post-washing inspection. The solvent could also damage any stickers or labels.

- Ultrasonic cleaning could damage the module permanently.

OPTICAL INSPECTION

After soldering the Module to the host board, consider optical inspection to check the following:

- Proper alignment and centering of the module over the pads.

- Proper solder joints on all pads.

- Excessive solder or contacts to neighboring pads, or vias.

REWORK

The Sterling-LWB5 module can be unsoldered from the host board if the Moisture Sensitivity Level (MSL) requirements are met as described in this datasheet.

> **Never attempt a rework on the module itself, e.g. replacing individual components. Such actions will terminate warranty coverage.**

SHIPPING, HANDLING, AND STORAGE

Shipping

Bulk orders of the Sterling-LWB5 SIP module are delivered in reels of 1000. Bulk orders for the U.FL and chip antenna modules are delivered in reels of 1000.

Handling

The Sterling-LWB5 modules contain a highly sensitive electronic circuitry. Handling without proper ESD protection may damage the module permanently.

Moisture Sensitivity Level (MSL)

Per J-STD-020, devices rated as MSL 4 and not stored in a sealed bag with desiccant pack should be baked prior to use.

Devices are packaged in a Moisture Barrier Bag with a desiccant pack and Humidity Indicator Card (HIC). Devices that will be subjected to reflow should reference the HIC and J-STD-033 to determine if baking is required.

If baking is required, refer to J-STD-033 for bake procedure.

Storage

Per J-STD-033, the shelf life of devices in a Moisture Barrier Bag is 12 months at <40ºC and <90% room humidity (RH).

Do not store in salty air or in an environment with a high concentration of corrosive gas, such as Cl2, H2S, NH3, SO2, or NOX.

Do not store in direct sunlight.

The product should not be subject to excessive mechanical shock.

The information in this document is subject to change without notice.

Repeated Reflow Soldering

Only a single reflow soldering process is encouraged for host boards.

AGENCY CERTIFICATIONS

<mark>TODO: All certifications are currently pending. When completed this statement will be removed.</mark>

FCC ID: TFB-1004, 15.247

IC ID: 5969A-1004, RSS 247

CE: Compliant to standards EN 60950-1, EN 300 328, and EN 301 489

Giteki: <mark>TODO: Add Giteki number</mark>

RCM

AGENCY STATEMENTS

Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC CAUTION: Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

The information in this document is subject to change without notice.

Industry Canada Statements

This Device complies with Industry Canada License-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that permitted for successful communication.

This device has been designed to operate with the antenna(s) listed below, and having a maximum gain of 2.0/2.0 dBi (LSR Dipole), 2.5/3.0 dBi (LSR FlexPIFA), and 1.0/4.0 dBi (Johanson Chip). Antennas not included in this list or having a gain greater than 2.0/2.0 dBi, 2.5/3.0 dBi, and 1.0/4.0 dBi are strictly prohibited for use with this device. The required antenna impedance is 50 ohms.

List of all Antennas Acceptable for use with the Transmitter

1) LSR 001-0009 center-fed 2.4 GHz and 5.5 GHz dipole antenna and LSR 080-0001 U.FL to Reverse Polarity SMA connector cable.
2) LSR 001-0016 2.4 GHz and 5.5 GHz FlexPIFA antenna.
3) Johanson Technology 2450AD14A5500 chip antenna.

Cet appareil est conforme avec Industrie Canada , exempts de licence standard RSS (s). L'opération est soumise aux deux conditions suivantes: (1) cet appareil ne peut pas provoquer d'interférences et (2) cet appareil doit accepter toute interférence, y compris les interférences qui peuvent causer un mauvais fonctionnement de l'appareil.

Pour réduire le risque d'interférence aux autres utilisateurs, le type d'antenne et son gain doiventêtre choisis de manière que la puissance isotrope rayonnée équivalente (PIRE) ne dépasse pascelle permise pour une communication réussie.

Cet appareil a été conçu pour fonctionner avec l'antenne (s) ci-dessous, et ayant un gain maximum de 2,0/2,0 dBi (LSR Dipole), 2,5/3,0 dBi (LSR FlexPIFA), et 1,0/4,0 dBi (Johanson Chip). Antennes pas inclus dans cette liste ou présentant un gain supérieure à 2,0/2,0 dBi, 2,5/3,0 dBi, et 1,0/4,0 dBi sont strictement interdits pour une utilisation avec cet appareil. L'impédance d'antenne requise est de 50 ohms.

Liste de toutes les antennes acceptables pour une utilisation avec l'émetteur

1) Antenne LSR 001-0009 centre-alimenté 2,4 GHz et 5,5 GHz dipôle et LSR 080-0001 U.FL à Inverse câble connecteur SMA à polarité.
2) LSR 001-0016 2,4 GHZ et 5,5 GHz antenne FlexPIFA.
3) Antenne de puce Johanson Technology 2450AD14A5500.

The information in this document is subject to change without notice.

OEM RESPONSIBILITIES TO COMPLY WITH FCC AND INDUSTRY CANADA REGULATIONS

The Sterling-LWB5 Module has been certified for integration into products only by OEM integrators under the following conditions:

To comply with FCC and Industry Canada RF exposure limits for general population / uncontrolled exposure, the antenna must be installed to provide a separation distance of at least 70 mm from all persons and operating in conjunction with any other antenna or transmitter, except in accordance with FCC multi-transmitter product procedures.

As long as the two conditions above are met, further transmitter testing will not be required.
However, the OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed (for example, digital device emissions, PC peripheral requirements, etc.).

> **IMPORTANT NOTE: In the event that these conditions cannot be met (for certain configurations or co-location with another transmitter), then the FCC and Industry Canada authorizations are no longer considered valid and the FCC ID and IC Certification Number cannot be used on the final product. In these circumstances, the OEM integrator will be responsible for re-evaluating the end product (including the transmitter) and obtaining a separate FCC and Industry Canada authorization.**

Le module de Sterling-LWB5 a été certifié pour l'intégration dans des produits uniquement par des intégrateurs OEM dans les conditions suivantes:

Pour se conformer aux limites d'exposition aux RF de la FCC et d'Industrie Canada pour la population générale / exposition non contrôlée, l'antenne doit être installé pour fournir une distance de séparation d'au moins 70 mm de toutes les personnes et fonctionnant conjointement avec une autre antenne ou émetteur, sauf en conformité avec la FCC procédures de produits multi- émetteurs.

Tant que les deux conditions précitées sont réunies, les tests de transmetteurs supplémentaires ne seront pas tenus. Toutefois, l'intégrateur OEM est toujours responsable de tester leur produit final pour toutes les exigences de conformité supplémentaires requis avec ce module installé (par exemple, les émissions appareil numérique, les exigences de périphériques PC, etc.)

> **NOTE IMPORTANTE: Dans le cas où ces conditions ne peuvent être satisfaites (pour certaines configurations ou de co-implantation avec un autre émetteur), puis la FCC et Industrie autorisations Canada ne sont plus considérés comme valides et l'ID de la FCC et IC numéro de certification ne peut pas être utilisé sur la produit final. Dans ces circonstances, l'intégrateur OEM sera chargé de réévaluer le produit final (y compris l'émetteur) et l'obtention d'un distincte de la FCC et Industrie Canada l'autorisation.**

The information in this document is subject to change without notice.

OEM LABELING REQUIREMENTS FOR END-PRODUCT

The Sterling-LWB5 module is labeled with its own FCC ID and IC Certification Number. The FCC ID and IC certification numbers are not visible when the module is installed inside another device, as such the end device into which the module is installed must display a label referring to the enclosed module. The final end product must be labeled in a visible area with the following:

"**Contains Transmitter Module FCC ID: TFB-1004**"

"**Contains Transmitter Module IC: 5969A-1004**"

or

"**Contains FCC ID: TFB-1004**"

"**Contains IC: 5969A-1004**"

The OEM of the Sterling-LWB5 Module must only use the approved antenna(s) listed above, which have been certified with this module.

Le module de Sterling-LWB5 est étiqueté avec son propre ID de la FCC et IC numéro de certification. L'ID de la FCC et IC numéros de certification ne sont pas visibles lorsque le module est installé à l'intérieur d'un autre appareil, comme par exemple le terminal dans lequel le module est installé doit afficher une etiquette faisant référence au module ci-joint. Le produit final doit être étiqueté dans un endroit visible par le suivant:

"**Contient Module émetteur FCC ID: TFB-1004**"
"**Contient Module émetteur IC: 5969A-1004**"

ou

"**Contient FCC ID: TFB-1004**"
"**Contient IC: 5969A-1004**"

Les OEM du module Sterling-LWB5 ne doit utiliser l'antenne approuvée (s) ci-dessus, qui ont été certifiés avec ce module.

The information in this document is subject to change without notice.

OEM END PRODUCT USER MANUAL STATEMENTS

The OEM integrator should not to provide information to the end user regarding how to install or remove this RF module or change RF related parameters in the user manual of the end product.

The user manual for the end product must include the following information in a prominent location:

To comply with FCC and Industry Canada RF exposure limits for general population / uncontrolled exposure, the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 70 mm from all persons and operating in conjunction with any other antenna or transmitter, except in accordance with FCC multi-transmitter product procedures.

Other user manual statements may apply.

L'intégrateur OEM ne devraient pas fournir des informations à l'utilisateur final sur la façon d'installer ou de supprimer ce module RF ou modifier les paramètres liés RF dans le manuel utilisateur du produit final.

Le manuel d'utilisation pour le produit final doit comporter les informations suivantes dans unendroit bien en vue:

Pour se conformer aux limites d'exposition aux RF de la FCC et d'Industrie Canada pour la population générale / exposition non contrôlée, l'antenne(s) utilisée pour ce transmetteur doit être installé pour fournir une distance de séparation d'au moins 70 mm de toutes les personnes et fonctionnant conjointement avec une autre antenne ou émetteur, sauf en conformité avec les procédures de produits multi- émetteur FCC.

Autres déclarations manuel de l'utilisateur peuvent s'appliquer.

The information in this document is subject to change without notice.

EUROPE

CE Notice

TODO: The European testing is not yet completed so the following information is a place holder only. When the testing is complete this statement will be removed.

This device has been tested and certified for use in the European Union. See the Declaration of Conformity (DOC) for specifics.

If this device is used in a product, the OEM has responsibility to verify compliance of the final product to the EU standards. A Declaration of Conformity must be issued and kept on file as described in the Radio and Telecommunications Terminal Equipment (R&TTE) Directive.

The 'CE' mark must be placed on the OEM product per the labeling requirements of the Directive.

Declaration of Conformity (DOC)

TODO: The DOC is not yet available. When the European testing is complete this statement will be removed.

This DOC can be downloaded from the LSR Website.

BLUETOOTH SIG QUALIFICATION

Overview

The Sterling LWB5 module is listed on the Bluetooth SIG website as a qualified Controller Subsystem.

Design Name	Owner	Declaration ID	Link to listing on the SIG website
450-0162	Laird	D035148	Sterling LWB5 450-0162 (Base Module)
450-0169	Laird	D035148	Sterling LWB5 450-0169 (Chip Antenna Module)
450-0168	Laird	D035148	Sterling LWB5 450-0168 (U.FL Module)
450-0171	Laird	D035148	Sterling LWB5 450-0171 (U.FL Dev Board)
450-0172	Laird	D035148	Sterling LWB5 450-0171 (Chip Antenna Dev Board)

It is a mandatory requirement of the Bluetooth Special Interest Group (SIG) that every product implementing Bluetooth technology has a Declaration ID. Every Bluetooth design is required to go through the qualification process, even when referencing a Bluetooth Design that already has its own Declaration ID. The Qualification Process requires each company to register as a member of the Bluetooth SIG – www.bluetooth.org

The following is a link to the Bluetooth Registration page: https://www.bluetooth.org/login/register/

For each Bluetooth Design it is necessary to purchase a Declaration ID. This can be done before starting the new qualification, either through invoicing or credit card payment. The fees for the Declaration ID will depend on your membership status, please refer to the following webpage:

https://www.bluetooth.org/en-us/test-qualification/qualification-overview/fees

For a detailed procedure of how to obtain a new Declaration ID for your design, please refer to the following SIG document, (login is required to views this document):

The information in this document is subject to change without notice.

https://www.bluetooth.org/DocMan/handlers/DownloadDoc.ashx?doc_id=283698&vId=317486

Qualification Steps When Referencing a Laird Controller Subsystem Design

To qualify your product when referencing a Laird Controller Subsystem design, follow these steps:

1. To start a listing, go to: https://www.bluetooth.org/tpg/QLI_SDoc.cfm

   Note: A user name and password are required to access this site.

2. In step 1, select the option, New Listing and Reference a Qualified Design.
3. Enter *97564* in the Controller Subsystem table entry.
4. Enter your complimentary Host Subsystem and optional Profile Subsystem in the table entry.
5. Select your pre-paid Declaration ID from the drop down menu or go to the Purchase Declaration ID page.

   Note: Unless the Declaration ID is pre-paid or purchased with a credit card, you cannot proceed until the SIG invoice is paid.

6. Once all the relevant sections of step 1 are finished, complete steps 2, 3, and 4 as described in the help document accessible from the site.

Your new design will be listed on the SIG website and you can print your Certificate and SDoC.

For further information please refer to the following training material:

https://www.bluetooth.org/en-us/test-qualification/qualification-overview/listing-process-updates

If you require assistance with the qualification process please contact our recommended Bluetooth Qualification Expert (BQE), Steve Flooks, steve.flook@eurexuk.com.
