Type II according to ISO 14021 including life cycle impact assessment (LCIA)

SIEMENS

General information

This environmental product declaration (EPD) is based on the international standard ISO 14021 (“Environmental labels and declarations – Self declared environmental claims – Type II environmental labelling”). The data in this EPD has been evaluated on a full-scale life cycle assessment (LCA) study according to ISO 14040/44, taking into account the product category rules (PCR) for electronic and electrotechnical products and systems defined in EN 50693.

Siemens is dedicated to an environmentally conscious design of its products in line with IEC 62430 and has implemented an integrated management system according to ISO 9001, ISO 14001 and ISO 45001.

Products	Variants in the product family SIMATIC S7-1500 CPU 1511 / 1513
Represented by the reference product	6ES7513-1AM03-0AB0
Product Description	SIMATIC S7-1500, CPU 1513-1 PN, central processing unit with work memory 600 KB for program and 2.5 MB for data, 1st interface: PROFINET IRT with 2-port switch, 25 ns bit performance, SIMATIC Memory Card required
Functional Unit	To control industrial automation applications over the reference service lifetime of 10 years ¹

¹ The lifetime value used for calculation is a reference value and does not equate with the minimum, average or real life time.

Material composition

The following chart outlines the overall material composition of the calculated reference product without packaging. Product weight of 0.36 kg adds up with packaging weight of 0.03 kg to a total weight of 0.39 kg. Packaging consists of cardboard, PE foam, PE film and paper.

Product Weight 0.36 kg

Substance assessment

At Siemens, we are committed to the development and production of environmentally sound and sustainably produced equipment. This includes avoiding hazardous substances in our products without compromising their benefits for our customers. Life cycle stages and reference scenarios

Manufacturing

This stage covers the extraction of natural resources, production of raw materials, manufacturing, packaging, and transportation.

Distribution and Operation

This stage covers the product's distribution, installation, use, and maintenance. Different operating conditions can lead to deviations from the reference scenario.

End-of-Life

This stage covers the disassembly or shredding and material recycling of all recyclable materials, as well as energy recovery, thermal treatment and the disposal of all other materials.

Scenarios

Energy model used:
Europe (standard mix)

Transportation model:
Truck-trailer, 34 - 40 t gross weight, 3500 km

Energy model used:
Europe (standard mix)

Distribution scenario:
Truck-trailer, 34 - 40 t gross weight, 3500 km

Use Scenario:
70% active mode (3.0 W),
30% off,
reference lifetime 10 years

Energy model used:
Europe (standard mix)

End-of-Life methodology:
Avoided burden (net-scrap calculation)

Key environmental performance indicators

The following impact categories characterize the product's environmental footprint. They have been calculated with LCIA methodology EF3.1; LCA tool: Green Digital Twin (GDT), Database: One Siemens LCA Database (based on MLC CUP 2023.2, formerly GaBi).

Measurement setup of the energy consumption for the active mode in operation phase: Room temperature, typical power consumption at 24 V, 25% load on the S7-1500 bus (only the internal power loss in the PLC is taken into account), PB interface not connected, all PN interfaces active.

Climate change

This chart shows the overall impact of the product on climate change – total. The operations phase is the life-cycle phase with the biggest overall impact. Different operating conditions can lead to deviations from the reference scenario. The distribution stage of the reference product is not shown in the chart due to its relatively small contribution to climate change and its impact is included in the operation bar.

End-of-Life results

The End-of-Life stage was modelled by shredding of the device, followed by sorting and material separation process.

It leads to:

- an overall **product recyclability of up to 18%** mainly due to metal content
- an **energy recoverability of up to 54%** from plastic materials
- a **minimum disposal rate of 28%**

The exact final values depend on the used recycling process and add up to 100%.

Note: The device should not be disposed of as unsorted municipal waste. Special treatment for specific components may be mandated by law or recommended for environmental reasons. Observe all local and applicable laws.

Legal Disclaimer

This Environmental Product Declaration (EPD) is for information purposes only. It is based upon the standards mentioned above. This EPD does not warrant or guarantee the composition of a product or that the product will retain a particular composition for a particular period. Therefore, all warranties, representations, conditions, and all other terms of any kind whatsoever implied by statute or common law are – to the fullest extent permitted by applicable law – excluded.

Siemens therefore does not assume any liability for any error or for any consequence which may arise from the use of this information to the maximum extent under the law.

Please be aware that the data of this EPD cannot be compared with data calculated based upon product category rules (PCRs) other than the standards mentioned above. The values given are only valid within the context specified and cannot be used directly to draw up the environmental assessment of an installation.
