

## FEATURES

- Wide Input Voltage Range: 3.5V to 30V
- Low Quiescent Current: 7mA
- Internal 8A Switch (10A for LT1270A)
- Very Few External Parts Required
- Self-Protected Against Overloads
- Shutdown Mode Draws Only 100 $\mu$ A Supply Current
- Flyback-Regulated Mode Has Fully Floating Outputs
- Can be Externally Synchronized  
(See LT1072 Data Sheet)
- Comes in Standard 5-Pin TO-220 Package

## APPLICATIONS

- High Efficiency Buck Converter
- PC Power Supply with Multiple Outputs
- Battery Upconverter
- Negative-to-Positive Converter

### USER NOTE:

This data sheet is only intended to provide specifications, graphs and a general functional description of the LT1270A/LT1270. Application circuits are included to show the capability of the LT1270A/LT1270. A complete design manual (AN-19) should be obtained to assist in developing new designs. AN-19 contains a comprehensive discussion of both the LT1070 and the external components used with it, as well as complete formulas for calculating the values of these components. AN-19 can also be used for the LT1270A/LT1270 by factoring in the higher switch current rating and higher operating frequency.

A comprehensive CAD program called SwitcherCad is also available. Contact the local sales office in your area or the factory direct.

## DESCRIPTION

The LT1270A/LT1270 are monolithic high power switching regulators. Identical to the popular LT1070, except for switching frequency (60kHz) and higher switch current, they can be operated in all standard switching configurations including buck, boost, flyback, and inverting. A high current, high efficiency switch is included on the die along with all oscillator, control, and protection circuitry. Integration of all functions allows the LT1270A/LT1270 to be built in a standard TO-220 power package. This makes it extremely easy to use and provides "bust proof" operation similar to that obtained with 3-pin linear regulators.

The LT1270A/LT1270 operate with supply voltages from 3.5V to 30V, and draw only 7mA quiescent current. By utilizing current-mode switching techniques, they provide excellent AC and DC load and line regulation.

The LT1270A/LT1270 use adaptive anti-sat switch drive to allow very wide ranging load currents with no loss in efficiency. An externally activated shutdown mode reduces total supply current to 100 $\mu$ A typical for standby operation.

## TYPICAL APPLICATION

### High Efficiency<sup>†</sup> Buck Converter

### Maximum Output Power\*

<sup>\*</sup> MULTIPLY BY 1.2 FOR LT1270A.  
 BUCK MODE OUTPUT POWER  $\approx$  (7.5A)(V<sub>OUT</sub>)  
<sup>†</sup> TRANSFORMER TURNS RATIO MUST BE OPTIMUM TO ACHIEVE FULL POWER

# LT1270A/LT1270

## ABSOLUTE MAXIMUM RATINGS

(Note 1)

Supply Voltage .....	30V
Switch Output Voltage .....	60V
Feedback Pin Voltage (Transient, 1ms) .....	±15V
Operating Junction Temperature Range	
LT1270AC/LT1270C (Oper.) .....	0°C to 125°C
LT1270AC/LT1270C (Short-Ckt) .....	0°C to 140°C
Storage Temperature Range .....	-65°C to 150°C
Lead Temperature (Soldering, 10 sec) .....	300°C

**Note 1:** Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

**Note 2:** Measured with  $V_C$  in Hi Clamp,  $V_{FB} = 0.8\text{V}$ .

**Note 3:** For duty cycles (DC) between 50% and 80%, minimum guaranteed

switch current is given by  $I_{LIM} = 6.67 (1.7 - DC)$  for the LT1270 and  $I_{LIM} = 8.33 (1.7 - DC)$  for the LT1270A.

**Note 4:** Minimum current limit is reduced by 0.5A at  $125^\circ\text{C}$ .  $100^\circ\text{C}$  test limits are guaranteed by correlation to  $125^\circ\text{C}$  tests.
