AMESP600-MNZ

The AMESP600-MNZ is Aimtec’s eagle series AC/DC power supply that offers greater cost effectiveness due to material normalization and production automation also leading to improved reliability and performance. Offering a commercial input voltage range of 80-277VAC and an output voltage range from 12-48V, this series will offer many benefits to your new system design.

This new series offers great operating temperatures, from -40°C to 50°C with full power and also features an isolation of 4000VAC for improved reliability and system safety. Furthermore, a high MTBF of over 300,000h, output short circuit protection (OSCP), output over-current protection (OCP), output over-voltage protection (OVP) and over-temperature protection (OTP) come standard with the series.

The AMESP600-MNZ is suitable for grid power, ATM machine, instrumentation, industrial controls, telecommunication and medical equipment applications.

Features

- Universal Input: 80 - 277VAC/110 - 390VDC
- Operating Temp: -40 °C to +70 °C
- High isolation voltage: Up to 4000VAC
- Low ripple & noise, 150mV(p-p) typ.
- Remote sense compensation, remote ON/OFF function
- Output short circuit, over-current, over-voltage and over temperature protection
- Regulated Output
- Active power factor correction, PFC > 0.95

Derating

Note: In addition to the temperature derating, input voltage derating must be applied when the input voltage is between 80-100VAC and 110-140VDC.

Remote ON/OFF

Note:

1. When the product is working normally, apply voltage (5V~15V) to RC+ and RC- to trigger the remote ON/OFF function, and the output voltage will be off. Withdraw the voltage, the output voltage will be re-established.
2. 5V auxiliary standby power supply is not controlled by remote ON/OFF function.

DC-OK

- Note:
1. When the output voltage (5V~15V) of the product reaches 90% of the rated value, DC_OK+ will be connected to DC_OK-.
 2. It is recommended the users apply a certain voltage between DC_OK+ and DC_OK- to detect the signal.

Remote Sense Compensatio

- Note:
1. The left side represents the internal schematic diagram of the product, the right side represents the customer system.
 2. Twisted pair wires are needed for S+/S-.

Dimensions

- Note:
- Unit: mm(inch)
 - Input wire gauge: 22-14AWG
 - Input screw terminal tightening torque: M4, 1.2N-m(Max)
 - Output screw terminal tightening torque: M5, 2.4N-m(Max)
 - Mounting screw tightening torque: M3, 4mm(Max), 0.4N-m(Max)
 - General tolerance: $\pm 1.0(\pm 0.04)$
 - At least one of the ① - ⑧ location must be connected to PE

Note:

1. All the measured parameters in this datasheet were under the conditions of Ta=25°C, humidity < 75% RH with nominal input voltage and rated output load.
2. The temperature derate of 5°C/1000m is required while operating altitude greater than 2000m.
3. All the testing methods of the index data that are shown in this datasheet are based on our company's corporate standards.
4. There might have a presence of audible noise due to the trade-off of the efficiency at high-LINE input voltage. However, it doesn't affect the power supply's performance and reliability.
5. The power supply case must be connected to the system's Protective Earth(PE) when the terminal equipment is in operation.
6. The potentiometer ADJ next to the output screw terminal is used to adjust the output voltage. Turning clockwise to increase the voltage and counter-clockwise to decrease the output voltage.
