

# Pass-Through Connector Holder

Holder with pass-through connector. All cables that can be used with the GPS device can also be used with the holder, for example a TMC cable. This means that you can have both charging and TMC connected to the GPS in the same time!

When you have attached the cable to the holder it is firmly in place and you do not have connect it manually to the device each time you put the GPS in the holder.

You can choose between a passive holder with tilt swivel, an active holder with cigarette lighter plug or an active holder for fixed installation.

Active holders with charging cable connect to the vehicle's cigarette lighter socket.

The active holders for fixed installation are connected behind the dashboard, this gives a neat installation without cables hanging over the interior.  
12/24 Volt

You can easily take the device with you when leaving the vehicle. The holders are equipped with a tilt swivel so they can be adjusted in order to avoid light reflection on the screen. Attach onto ProClip Mounting Platform.

#### Passive holder with tilt swivel, with pass-through connector

Item no.	Model
277023	Navigon 1200, 1210
