6-in-1 instrument integration

Get professional-level oscilloscope functionality with industry-leading software analysis and 6-in-1 instrument integration. The 1000 X-Series gives you the following functionality that will save you money and valuable bench space.

OSCILLOSCOPE

The 1000 X-Series is a family of low-cost oscilloscopes that don't compromise on quality. Each model has measurement and standard software analysis capability that rivals oscilloscopes 3x the price.

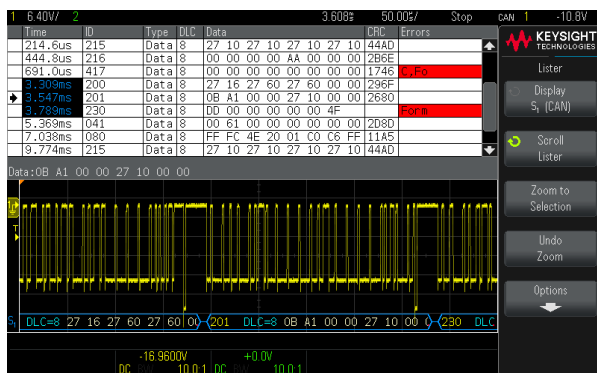

WaveGen (built-in 20 MHz function generator with modulation capability)

(EDUX1052G, DSOX1202G, and DSOX1204G models only)

The 1000 X-Series offers an integrated 20 MHz function generator with modulation capability. It's ideal for educational or design labs where bench space and budget are at a premium. The integrated function generator provides stimulus output of sine, square, ramp, pulse, DC and noise waveforms to your device under test. Add modulation to the signal with customizable AM, FM and FSK settings. No need to buy a separate function generator when you can get one integrated into your new oscilloscope.

Hardware-based serial protocol decode and triggering

The 1000 X-Series is a powerful protocol analyzer that enables hardware-based specialized serial communication analysis (standard). Other vendors' oscilloscopes use software post-processing techniques that slow down the waveform and decode update rate, but the 1000 X-Series has faster decoding based on hardware technology that enhances scope usability and the probability of capturing infrequent serial communication errors.

The EDUX models support I²C and UART/RS232 (standard). The DSOX models support I²C, SPI, UART/RS232, CAN and LIN (standard).

6-in-1 instrument integration (continued)

Frequency Response Analyzer (EDUX1052G, DSOX1202G, and DSOX1204G models only)

Frequency response analysis (gain & phase Bode plots) is a critical measurement to characterize amplifiers, passive networks, and power supply feedback networks. Bode plots are also fundamental concepts that every electrical engineering student should learn. The 1000 X-Series' frequency response analyzer capability (standard in "G" models) is the perfect tool to help students understand the gain and phase performance of passive RLC circuits and amplifiers. This capability is achieved with a gain and phase measurement versus frequency (Bode plot). Vector network analyzers (VNAs) and low-cost frequency response analyzers are typically used for these measurements, but now an easy-to-use and affordable gain and phase analysis is possible by utilizing the 1000 X-Series' built-in WaveGen and Bode plot capability.

Digital Voltmeter

The 1000 X-Series has an integrated 3-digit voltmeter (DVM) inside each oscilloscope. The voltmeter operates through probes connected to the oscilloscope channels, but its measurement is decoupled from the oscilloscope triggering system so both the DVM and triggered oscilloscope measurements can be made with the same connection. You can quickly measure AC RMS, DC, and DC RMS without configuring the oscilloscope capture. The voltmeter results are always displayed, keeping these quick characterization measurements at your fingertips. The built-in DVM comes standard in 1000 X-Series oscilloscopes.

Frequency Counter

There is an integrated 5-digit frequency counter inside each oscilloscope. The frequency counter operates through probes connected to the oscilloscope channels so that both the counter and triggered oscilloscope measurements can be made with the same connection. You can quickly measure frequency without configuring the oscilloscope capture. The high-resolution frequency measurement results are always displayed, keeping these quick characterization measurements at your fingertips.

Educator's Oscilloscope Training Kit

The **Educator's Oscilloscope Training Kit** (standard) provides an array of built-in training signals so that electrical engineering and physics students can learn what an oscilloscope does and how they can perform basic oscilloscope measurements. Also included in the kit is a comprehensive oscilloscope lab guide and tutorial written specifically for the undergraduate student. Keysight also provides a PowerPoint slide-set that professors and lab assistants can use as a pre-lab lecture on oscilloscope fundamentals. This lecture takes about 30 minutes and should be presented before electrical engineering and physics students begin their first circuits lab. Note that this PowerPoint slide-set also includes a complete set of speaker notes.
