General purpose chip resistors (power)

Size 1210

*Contents in this sheet are subject to change without prior notice.

FEATURE

- 1. High reliability and stability
- 2. Reduced size of final equipment
- 3. Lower assembly costs
- 4. Higher component and equipment reliability
- 5. RoHS compliant and Lead free products

APPLICATION

- Consumer electrical equipment
- Automotive application
- EDP, Computer application
- Telecom application

DESCRIPTION

The resistors are constructed in a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive paste that is applied to the top surface of the substrate. The composition of the paste is adjusted to give the approximate resistance required and the value is trimmed to nominated value within tolerance which controlled by laser trimming of this resistive layer.

The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For ease of soldering the outer layer of these end terminations is a Tin (lead free) alloy.

QUICK REFERENCE DATA

Item	General Specification				
Series No.	WF10P				
Size code	1210 (3226)				
Resistance Tolerance	±1% (E-96), ±5% (E-24)				
Resistance Range	Jumper, $1\Omega \sim 10M\Omega$ (E96+E24 series)				
TCR (ppm/°C)	10R ~ 1M0, ≤ ± 100 ppm/°C < 10R; > 1M0, ≤ ± 200 ppm/°C				
-55°C ~ +155°C					
Max. dissipation at T _{amb} =70°C	1/2 W				
Max. Operation Voltage (DC or RMS)	200V (I = 3.2 Amp. For Jumper)				
Max. overload voltage	400V (I = 8 Amp. For Jumper)				
Climatic category (IEC 60068)	55/155/56				
Basic specification	JIS C 5201-1 : 1998				

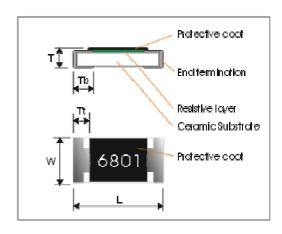

Note:

- 1. This is the maximum voltage that may be continuously supplied to the resistor element, see "IEC publication 60115-8"
- 2. Max. Operation Voltage : So called RCWV (Rated Continuous Working Voltage) is determined by $RCWV = \sqrt{Rated Power \times Resistance \, Value} \, \, \text{or Max. RCWV listed above, whichever is lower.}$
- 3. Jumper is defined as max. 20mohm

FUNCTIONAL DESCRIPTION

Product characterization

Standard values of nominal resistance are taken from the E96 & E24 series for resistors with a tolerance of $\pm 1\%$, $\pm 5\%$. The values of the E24/E96 series are in accordance with "IEC publication 60063".

power

Derating

The power that the resistor can dissipate depends on the operating temperature; see Fig.2

MOUNTING

Due to their rectangular shapes and small tolerances, Surface Mountable Resistors are suitable for handling by automatic placement systems.

Chip placement can be on ceramic substrates and printed-circuit boards (PCBs).

Electrical connection to the circuit is by individual soldering condition.

The end terminations guarantee a reliable contact.

SOLDERING CONDITION

The robust construction of chip resistors allows them to be completely immersed in a solder bath of 260°C for 10 seconds. Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solderability at 235°C during 2 seconds. The test condition for no leaching is 260°C for 30 seconds. Typical examples of soldering processes that provide reliable joints without any damage are given in Fig 3.

TEST AND REQUIREMENTS(JIS C 5201-1: 1998)

Basic specification:

The tests are carried out in accordance with IEC publication 68, "Recommended basic climatic and mechanical robustness testing procedure for electronic components" and under standard atmospheric conditions according to IEC 68-1, subclause 5.3, unless otherwise specified.

Temperature: 15°C to 35°C. Relative humidity: 45% to 75%.

Air pressure: 86kPa to 106 kPa (860 mbar to 1060 mbar).
