

CUTTER

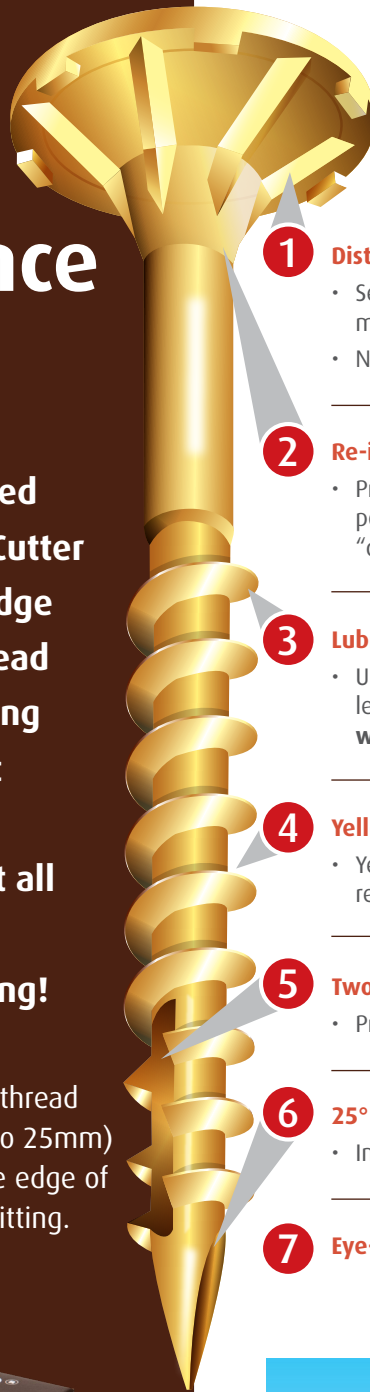

The next generation in performance woodscrews

Due to the **TWO** unique patented slots (25mm and above), the Cutter allows screwing close to the edge without splitting. Under the head are **BOTH** ribs and tucks enabling the screw to sit flush and tight without surface damage. With the ability to penetrate almost all timbers without a pilot hole, this really is a screw worth using!

Unique design with 2 slots cut into the thread on 30mm screws and above (1 cut up to 25mm) to allow the screw to work closer to the edge of timber and board materials without splitting.

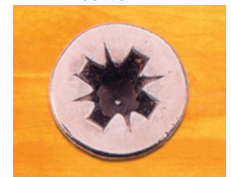

REISSER®

- 1 Distinct ribs and tucks**
 - Self countersinking into all timber and board materials.
 - No need to counterbore
- 2 Re-inforced collar**
 - Prevents snapping and gives depth for a wide, deep pozi to be inserted, therefore reducing the risk of "cam-out"
- 3 Lubricated, sharp, wide, deep thread**
 - Up to 40% reduction in driving resistance therefore less torque required. Quick and easy penetration **without** a pilot hole
- 4 Yellow tropicalized**
 - Yellow tropicalized finish gives superior rust resistance compared to a standard BZP screw
- 5 Two patented slots**
 - Prevents splitting when screwing close to the edge
- 6 25° Needle point**
 - Immediate start
- 7 Eye-catching, informative packaging**
