

## High Speed Isolated RS-485 Transceivers

### Functional Diagrams

**IL3585-3**  
(narrow-body)

**IL3585**  
(wide-body)

### Features

- 40 Mbps data rate
- 6 kV<sub>RMS</sub> isolation / 12.8 kV surge / 1 kV<sub>RMS</sub> working voltage (V-Series)
- 3 V to 5 V power supplies
- 20 ns propagation delay
- 5 ns pulse skew
- 50 kV/μs typ.; 30 kV/μs min. common mode transient immunity
- 44000 year barrier life
- 15 kV bus ESD protection
- Low EMC footprint
- Thermal shutdown protection
- -40°C to +85°C temperature range
- Meets or exceeds ANSI RS-485 and ISO 8482:1987(E)
- VDE V 0884-10 certified; UL 1577 recognized
- 0.15" or 0.3" True 8<sup>TM</sup> 16-pin SOIC packages

### Applications

- Factory automation
- Industrial control networks
- Building environmental controls
- Equipment covered under IEC 61010-1 Edition 3
- 5 kV<sub>RMS</sub> rated IEC 60601-1 medical applications

### Description

The IL3585 is a galvanically isolated, high-speed differential bus transceiver, designed for bidirectional data communication on balanced transmission lines. The device uses NVE's patented\* IsoLoop spintronic Giant Magnetoresistance (GMR) technology.

A unique ceramic/polymer composite barrier provides excellent isolation and virtually unlimited barrier life.

The part is available in an ultraminiature 0.15" 16-pin SOIC package, a JEDEC-standard 0.3"-wide package, or NVE's exclusive True 8<sup>TM</sup> 16-pin SOIC package for true 8 millimeter creepage.

The IL3585 delivers an exceptional 2.3 V differential output into a 54 Ω load over the supply range of 4.5 V to 5.5 V. This provides better data integrity over longer cable lengths, even at data rates as high as 40 Mbps. The device is also compatible with 3 V supplies, allowing interface to standard microcontrollers without additional level shifting.

Current limiting and thermal shutdown features protect against output short circuits and bus contention that may cause excessive power dissipation. Receiver inputs feature a "fail-safe if open" design, ensuring a logic high R-output if A/B are floating.

V <sub>ID</sub> (A-B)	DE	RE	R	D	Mode
≥ 200 mV	L	L	H	X	Receive
≤ -200 mV	L	L	L	X	Receive
≥ 1.5 V	H	L	H	H	Drive
≤ -1.5 V	H	L	L	L	Drive
X	X	H	Z	X	Hi-Z R
Open	L	L	H	X	Receive

## Absolute Maximum Ratings<sup>(1)</sup>

Parameter	Symbol	Min.	Typ.	Max.	Units	Test Conditions
Storage Temperature	$T_S$	-55		150	°C	
Junction Temperature	$T_J$	-55		150	°C	
Ambient Operating Temperature	$T_A$	-40		85	°C	
Voltage Range at A or B Bus Pins		-7		12	V	
Supply Voltage <sup>(1)</sup>	$V_{DD1}, V_{DD2}$	-0.5		7	V	
Digital Input Voltage		-0.5		$V_{DD} + 0.5$	V	
Digital Output Voltage		-0.5		$V_{DD} + 1$	V	
ESD (all bus nodes)		15			kV	HBM

## Recommended Operating Conditions

Parameter	Symbol	Min.	Typ.	Max.	Units	Test Conditions
Supply Voltage	$V_{DD1}$ $V_{DD2}$	3.0 4.5		5.5 5.5	V	
Junction Temperature	$T_J$	-40		110	°C	
Input Voltage at any Bus Terminal (separately or common mode)	$V_I$ $V_{IC}$			12 -7	V	
High-Level Digital Input Voltage	$V_{IH}$	2.4 3.0		$V_{DD1}$	V	$V_{DD1} = 3.3\text{ V}$ $V_{DD1} = 5.0\text{ V}$
Low-Level Digital Input Voltage	$V_{IL}$	0		0.8	V	
Differential Input Voltage <sup>(2)</sup>	$V_{ID}$			+12 / -7	V	
High-Level Output Current (Driver)	$I_{OH}$			60	mA	
High-Level Digital Output Current (Receiver)	$I_{OH}$			8	mA	
Low-Level Output Current (Driver)	$I_{OL}$	-60			mA	
Low-Level Digital Output Current (Receiver)	$I_{OL}$	-8			mA	
Ambient Operating Temperature	$T_A$	-40		85	°C	
Digital Input Signal Rise and Fall Times	$t_{IR}, t_{IF}$					DC Stable

## Insulation Specifications

Parameter	Symbol	Min.	Typ.	Max.	Units	Test Conditions
Creepage Distance (external)	IL3585-3E IL3585E	4.0 8.03	8.3		mm	Per IEC 60601
Total Barrier Thickness (internal)		0.013	0.016		mm	
Barrier Resistance	$R_{IO}$		$>10^{14}$		$\Omega$	500 V
Barrier Capacitance	$C_{IO}$		3		pF	f = 1 MHz
Leakage Current			0.2		$\mu A_{RMS}$	240 $V_{RMS}$ , 60 Hz
Comparative Tracking Index	CTI	$\geq 600$			$V_{RMS}$	Per IEC 60112
High Voltage Endurance (Maximum Barrier Voltage for Indefinite Life)	AC DC	$V_{IO}$	1000 1500		$V_{RMS}$ $V_{DC}$	At maximum operating temperature
Surge Immunity ("V" Versions)	$V_{IOSM}$	12.8 kV			$V_{PK}$	Per IEC 61000-4-5
Barrier Life			44000		Years	100°C, 1000 $V_{RMS}$ , 60% CL activation energy

## Thermal Characteristics

Parameter	Symbol	Min.	Typ.	Max.	Units	Test Conditions
Junction-Ambient Thermal Resistance	IL3585-3E IL3585E	$\theta_{JA}$	100 60		°C/W	Soldered to double-sided board; free air; case temperature measured on top surface
Junction-Case Thermal Resistance	IL3585-3E IL3585E	$\Psi_{JT}$	25 12		°C/W	
Power Dissipation	IL3585-3E IL3585E	$P_D$		625 800	mW	

## Safety and Approvals

### VDE V 0884-10

Standard isolation grade; File Number 5016933-4880-0001

- Working Voltage ( $V_{IORM}$ ) 600  $V_{RMS}$  (848  $V_{PK}$ ); basic insulation; pollution degree 2
- Transient overvoltage ( $V_{IOTM}$ ) 4000  $V_{PK}$
- Surge rating 4000 V
- Each part tested at 1590  $V_{PK}$  for 1 second, 5 pC partial discharge limit
- Samples tested at 4000  $V_{PK}$  for 60 sec.; then 1358  $V_{PK}$  for 10 sec. with 5 pC partial discharge limit

V-Series isolation grade; certification pending

- Working Voltage ( $V_{IORM}$ ) 1000  $V_{RMS}$  (1415  $V_{PK}$ ); reinforced insulation; pollution degree 2
- Isolation voltage ( $V_{ISO}$ ) 6000  $V_{RMS}$
- Surge immunity ( $V_{IOSM}$ ) 12.8 k $V_{PK}$
- Surge rating 8 kV
- Transient overvoltage ( $V_{IOTM}$ ) 6000  $V_{PK}$
- Each part tested at 2387  $V_{PK}$  for 1 second, 5 pC partial discharge limit
- Samples tested at 6000  $V_{PK}$  for 60 sec.; then 2122  $V_{PK}$  for 10 sec. with 5 pC partial discharge limit

Safety-Limiting Values	Symbol	Value	Units
Safety rating ambient temperature	$T_S$	180	$^{\circ}C$
Safety rating power (180 $^{\circ}C$ )	$P_S$	270	mW
Supply current safety rating (total of supplies)	$I_S$	54	mA

### IEC 61010-1 (Edition 2; TUV Certificate Numbers N1502812; N1502812-101)

Reinforced Insulation; Pollution Degree II; Material Group III

Part No. Suffix	Package	Working Voltage
-3	SOIC	150 $V_{RMS}$
None	Wide-body SOIC/True 8 <sup>TM</sup>	300 $V_{RMS}$

### UL 1577 (Component Recognition Program File Number E207481)

Standard isolation grade

Each part tested at 3000  $V_{RMS}$  (4243  $V_{PK}$ ) for 1 second; each lot sample tested at 2500  $V_{RMS}$  (3536  $V_{PK}$ ) for 1 minute

V-Series isolation grade (recognition pending)

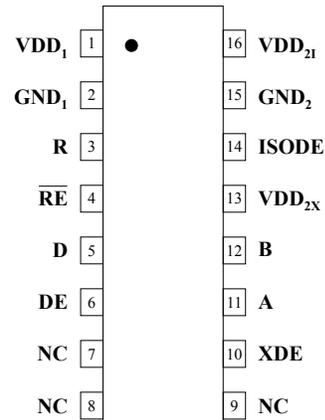

6 kV rating; tested at 7.2 k $V_{RMS}$  (10.2 k $V_{PK}$ ) for 1 second; each lot sample tested at 6 k $V_{RMS}$  (8485  $V_{PK}$ ) for 1 minute

## Soldering Profile

Per JEDEC J-STD-020C, MSL 1

### IL3585-3 (0.15" SOIC Package) Pin Connections

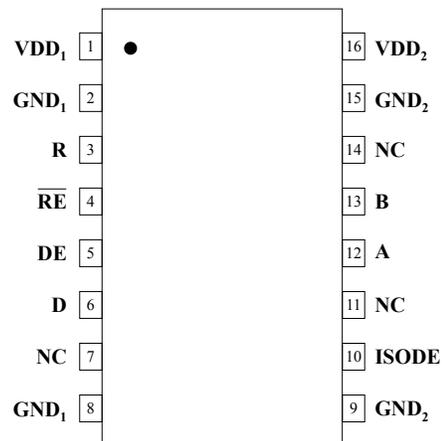

1	V <sub>DD1</sub>	Input power supply
2	GND <sub>1</sub>	Input power supply ground return
3	R	Output data from bus
4	$\overline{RE}$	Read data enable (if $\overline{RE}$ is high, R= high impedance)
5	D	Data input to bus
6	DE	Drive enable
7, 8, 9	NC	No internal connection
10	XDE	Transceiver Device Enable input enables the transceiver from the bus side, or is connected to ISODE to enable the transceiver from the controller-side DE input. (this input should not be left unterminated)
11	A	Non-inverting bus line
12	B	Inverting bus line
13	V <sub>DD2X</sub>	Output transceiver power supply (normally connected to pin 16)
14	ISODE	Isolated DE output (normally connected to pin 10)
15	GND <sub>2</sub>	Output power supply ground return.
16	V <sub>DD2I</sub>	Output isolation power supply (normally connected to pin 13)

**IL3585-3**

### IL3585 (0.3" SOIC Package) Pin Connections

1	V <sub>DD1</sub>	Input power supply
2	GND <sub>1</sub>	Input power supply ground return (pin 2 is internally connected to pin 8)
3	R	Output data from bus
4	$\overline{RE}$	Read data enable (if $\overline{RE}$ is high, R= high impedance)
5	DE	Drive enable
6	D	Data input to bus
7	NC	No internal connection
8	GND <sub>1</sub>	Input power supply ground return (pin 8 is internally connected to pin 2)
9	GND <sub>2</sub>	Output power supply ground return (pin 9 is internally connected to pin 15)
10	ISODE	Isolated DE output for use in PROFIBUS applications where the state of the isolated drive enable node needs to be monitored.
11	NC	No internal connection
12	A	Non-inverting bus line
13	B	Inverting bus line
14	NC	No internal connection
15	GND <sub>2</sub>	Output power supply ground return (pin 15 is internally connected to pin 9)
16	V <sub>DD2</sub>	Output power supply

**IL3585**

## Driver Section

Electrical Specifications ( $T_{\min}$ to $T_{\max}$ and $V_{DD} = 4.5\text{ V to }5.5\text{ V}$ unless otherwise stated)						
Parameter	Symbol	Min.	Typ. <sup>(5)</sup>	Max.	Units	Test Conditions
Input Clamp Voltage	$V_{IK}$			-1.5	V	$I_L = -18\text{ mA}$
Output voltage	$V_O$			$V_{DD}$	V	$I_O = 0$
Differential Output Voltage <sup>(2)</sup>	$ V_{OD1} $			$V_{DD}$	V	$I_O = 0$
Differential Output Voltage <sup>(2)</sup>	$ V_{OD2} $	2.5	3	5	V	$R_L = 54\ \Omega$ , $V_{DD} = 5\text{ V}$
Differential Output Voltage <sup>(2,6)</sup>	$V_{OD3}$	2.3		5	V	$R_L = 54\ \Omega$ , $V_{DD} = 4.5\text{ V}$
Change in Magnitude of Differential Output Voltage <sup>(7)</sup>	$\Delta V_{OD} $			$\pm 0.2$	V	$R_L = 54\ \Omega$ or $100\ \Omega$
Common Mode Output Voltage	$V_{OC}$			3	V	$R_L = 54\ \Omega$ or $100\ \Omega$
Change in Magnitude of Common Mode Output Voltage <sup>(7)</sup>	$\Delta V_{OC} $			$\pm 0.2$	V	$R_L = 54\ \Omega$ or $100\ \Omega$
Output Current <sup>(4)</sup>	$I_O$			1 -0.8	mA	Output Disabled, $V_O = 12$ $V_O = -7$
High Level Input Current	$I_{IH}$			10	$\mu\text{A}$	$V_I = 3.5\text{ V}$
Low Level Input Current	$I_{IL}$			-10	$\mu\text{A}$	$V_I = 0.4\text{ V}$
Absolute  Short-circuit Output Current	$I_{OS}$			250	mA	$-7\text{ V} < V_O < 12\text{ V}$
Supply Current	$V_{DD1} = 5\text{ V}$ $V_{DD1} = 3.3\text{ V}$			4 3	6 4	mA (Outputs Enabled)

### Notes (apply to both driver and receiver sections):

- All voltages are with respect to network ground except differential I/O bus voltages.
- Differential input/output voltage is measured at the noninverting terminal A with respect to the inverting terminal B.
- Skew limit is the maximum propagation delay difference between any two devices at  $25^\circ\text{C}$ .
- The power-off measurement in ANSI Standard EIA/TIA-422-B applies to disabled outputs only and is not applied to combined inputs and outputs.
- All typical values are at  $V_{DD1}, V_{DD2} = 5\text{ V}$  or  $V_{DD1} = 3.3\text{ V}$  and  $T_A = 25^\circ\text{C}$ .
- $-7\text{ V} < V_{CM} < 12\text{ V}$ ;  $4.5\text{ V} < V_{DD} < 5.5\text{ V}$ .
- $\Delta|V_{OD}|$  and  $\Delta|V_{OC}|$  are the changes in magnitude of  $V_{OD}$  and  $V_{OC}$ , respectively, that occur when the input is changed from one logic state to the other.
- This applies for both power on and power off, refer to ANSI standard RS-485 for exact condition. The EIA/TIA-422-B limit does not apply for a combined driver and receiver terminal.
- Includes 10 ns read enable time. Maximum propagation delay is 25 ns after read assertion.
- Pulse skew is defined as  $|t_{PLH} - t_{PHL}|$  of each channel.
- Absolute Maximum specifications mean the device will not be damaged if operated under these conditions. It does not guarantee performance.
- The relevant test and measurement methods are given in the Electromagnetic Compatibility section on p. 6.
- External magnetic field immunity is improved by this factor if the field direction is “end-to-end” rather than to “pin-to-pin” (see diagram on p. 6).

## Receiver Section

Electrical Specifications ( $T_{\min}$ to $T_{\max}$ and $V_{DD} = 4.5\text{ V}$ to $5.5\text{ V}$ unless otherwise stated)						
Parameter	Symbol	Min.	Typ. <sup>(5)</sup>	Max.	Units	Test Conditions
Positive-going Input Threshold Voltage	$V_{IT+}$			0.2	V	$-7\text{ V} < V_{CM} < 12\text{ V}$
Negative-going Input Threshold Voltage	$V_{IT-}$	-0.2			V	$-7\text{ V} < V_{CM} < 12\text{ V}$
Hysteresis Voltage ( $V_{IT+} - V_{IT-}$ )	$V_{HYS}$		40		mV	$V_{CM} = 0\text{ V}$ , $T = 25^\circ\text{C}$
High Level Digital Output Voltage	$V_{OH}$	$V_{DD} - 0.2$	$V_{DD}$		V	$V_{ID} = 200\text{ mV}$ $I_{OH} = -20\text{ }\mu\text{A}$
Low Level Digital Output Voltage	$V_{OL}$			0.2	V	$V_{ID} = -200\text{ mV}$ $I_{OH} = 20\text{ }\mu\text{A}$
High-impedance-state output current	$I_{OZ}$			$\pm 1$	$\mu\text{A}$	$V_O = 0.4$ to $(V_{DD2} - 0.5)\text{ V}$
Line Input Current <sup>(8)</sup>	$I_I$			1	mA	$V_I = 12\text{ V}$
				-0.8	mA	$V_I = -7\text{ V}$
Input Resistance	$R_I$	20			k $\Omega$	
Supply Current	$I_{DD2}$		5	16	mA	No load; Outputs Enabled; $V_{DD2X}$ connected to $V_{DD21}$ if applicable

## Switching Characteristics

$V_{DD1} = 5\text{ V}$ , $V_{DD2} = 5\text{ V}$						
Parameter	Symbol	Min.	Typ. <sup>(5)</sup>	Max.	Units	Test Conditions
Data Rate		40			Mbps	$R_L = 54\text{ }\Omega$ , $C_L = 50\text{ pF}$
Propagation Delay <sup>(2, 9)</sup>	$t_{PD}$		27	35	ns	$V_O = -1.5$ to $1.5\text{ V}$ , $C_L = 15\text{ pF}$
Pulse Skew <sup>(2, 10)</sup>	$t_{SK}(P)$		1	6	ns	$V_O = -1.5$ to $1.5\text{ V}$ , $C_L = 15\text{ pF}$
Skew Limit <sup>(3)</sup>	$t_{SK}(LIM)$		2	12	ns	$R_L = 54\text{ }\Omega$ , $C_L = 50\text{ pF}$
Output Enable Time To High Level	$t_{PZH}$		15	25	ns	$C_L = 15\text{ pF}$
Output Enable Time To Low Level	$t_{PZL}$		15	25	ns	$C_L = 15\text{ pF}$
Output Disable Time From High Level	$t_{PHZ}$		15	25	ns	$C_L = 15\text{ pF}$
Output Disable Time From Low Level	$t_{PLZ}$		15	25	ns	$C_L = 15\text{ pF}$
Common Mode Transient Immunity (Output Logic High to Logic Low)	$ CM_H ,  CM_L $	30	50		kV/ $\mu\text{s}$	$V_{CM} = 1500\text{ V}_{DC}$ $t_{TRANSIENT} = 25\text{ ns}$
$V_{DD1} = 3.3\text{ V}$ , $V_{DD2} = 5\text{ V}$						
Parameter	Symbol	Min.	Typ. <sup>(5)</sup>	Max.	Units	Test Conditions
Data Rate		40			Mbps	$R_L = 54\text{ }\Omega$ , $C_L = 50\text{ pF}$
Propagation Delay <sup>(2, 9)</sup>	$t_{PD}$		30	38	ns	$V_O = -1.5$ to $1.5\text{ V}$ , $C_L = 15\text{ pF}$
Pulse Skew <sup>(2, 10)</sup>	$t_{SK}(P)$		1	6	ns	$V_O = -1.5$ to $1.5\text{ V}$ , $C_L = 15\text{ pF}$
Skew Limit <sup>(3)</sup>	$t_{SK}(LIM)$		4	12	ns	$R_L = 54\text{ }\Omega$ , $C_L = 50\text{ pF}$
Output Enable Time To High Level	$t_{PZH}$		17	27	ns	$C_L = 15\text{ pF}$
Output Enable Time To Low Level	$t_{PZL}$		17	27	ns	$C_L = 15\text{ pF}$
Output Disable Time From High Level	$t_{PHZ}$		17	27	ns	$C_L = 15\text{ pF}$
Output Disable Time From Low Level	$t_{PLZ}$		17	27	ns	$C_L = 15\text{ pF}$
Common Mode Transient Immunity (Output Logic High to Logic Low)	$ CM_H ,  CM_L $	30	50		kV/ $\mu\text{s}$	$V_{CM} = 1500\text{ V}_{DC}$ $t_{TRANSIENT} = 25\text{ ns}$

## Magnetic Field Immunity<sup>(12)</sup>

V <sub>DD1</sub> = 5 V, V <sub>DD2</sub> = 5 V						
Power Frequency Magnetic Immunity	H <sub>PF</sub>	2800	3500		A/m	50Hz/60Hz
Pulse Magnetic Field Immunity	H <sub>PM</sub>	4000	4500		A/m	t <sub>p</sub> = 8μs
Damped Oscillatory Magnetic Field	H <sub>OSC</sub>	4000	4500		A/m	0.1Hz – 1MHz
Cross-axis Immunity Multiplier <sup>(13)</sup>	K <sub>X</sub>		2.5			
V <sub>DD1</sub> = 3.3 V, V <sub>DD2</sub> = 5 V						
Power Frequency Magnetic Immunity	H <sub>PF</sub>	1000	1500		A/m	50Hz/60Hz
Pulse Magnetic Field Immunity	H <sub>PM</sub>	1800	2000		A/m	t <sub>p</sub> = 8μs
Damped Oscillatory Magnetic Field	H <sub>OSC</sub>	1800	2000		A/m	0.1Hz – 1MHz
Cross-axis Immunity Multiplier <sup>(13)</sup>	K <sub>X</sub>		2.5			

## Electrostatic Discharge Sensitivity

This product has been tested for electrostatic sensitivity to the limits stated in the specifications. However, NVE recommends that all integrated circuits be handled with appropriate care to avoid damage. Damage caused by inappropriate handling or storage could range from performance degradation to complete failure.

## Narrow- and Wide-Body Pinout Differences

The narrow-body version (IL3585-3E) is designed for application flexibility and minimum board area in densely-populated PCAs. The wide-body version (IL3585E) has redundant ground pins for layout flexibility.

The narrow-body version provides a separate isolated DE output (ISODE) and Transceiver Device Enable (XDE) input. ISODE follows the Device Enable input (DE). XDE can be used to enable and disable the transceiver from the bus side, or connected to ISODE to enable and disable the transceiver from the DE controller-side input. The narrow-body version also provides separate bus-side power supply pins— $V_{DD2X}$  for the transceiver module and  $V_{DD2I}$  for the isolation module. These pins should be externally connected for normal operation, but they can be used separately for testing or troubleshooting.

The wide-body version has internal connections between the isolated DE output and the Transceiver Device Enable input, and well as between the two  $V_{DD2}$  bus-side power supply pins. The two internally GND pins for each supply side provide layout flexibility. The ISODE output can be used in PROFIBUS applications where the state of the isolated drive enable node needs to be monitored, or for testing or troubleshooting.

## Dynamic Power Consumption

IsoLoop Isolators achieve their low power consumption from the way they transmit data across the isolation barrier. By detecting the edge transitions of the input logic signal and converting these to narrow current pulses, a magnetic field is created around the GMR Wheatstone bridge. Depending on the direction of the magnetic field, the bridge causes the output comparator to switch following the input logic signal. Since the current pulses are narrow, about 2.5 ns, the power consumption is independent of mark-to-space ratio and solely dependent on frequency. This has obvious advantages over optocouplers, which have power consumption heavily dependent on frequency and time.

Data Rate (Mbps)	$I_{DD1}$	$I_{DD2}$
1	150 $\mu$ A	150 $\mu$ A
10	1.5 mA	1.5 mA
20	3 mA	3 mA
40	6 mA	6 mA

Table 2. Typical Dynamic Supply Currents.

## Power Supply Decoupling

Both  $V_{DD1}$  and  $V_{DD2}$  must be bypassed with 47 nF ceramic capacitors. These should be placed as close as possible to  $V_{DD}$  pins for proper operation. Additionally,  $V_{DD2}$  should be bypassed with a 10  $\mu$ F tantalum capacitor.

## Maintaining Creepage

Creepage distances are often critical in isolated circuits. In addition to meeting JEDEC standards, NVE isolator packages have unique creepage specifications. Standard pad libraries often extend under the package, compromising creepage and clearance. Similarly, ground planes, if used, should be spaced to avoid compromising clearance. Package drawings and recommended pad layouts are included in this datasheet.

## DC Correctness

The IL3585 incorporates a patented refresh circuit to maintain the correct output state with respect to data input. At power up, the bus outputs will follow the Function Table shown on Page 1. The DE input should be held low during power-up to eliminate false drive data pulses from the bus. An external power supply monitor to minimize glitches caused by slow power-up and power-down transients is not required.

## Electromagnetic Compatibility

The IL3585 is fully compliant with generic EMC standards EN50081, EN50082-1 and the umbrella line-voltage standard for Information Technology Equipment (ITE) EN61000. The IsoLoop Isolator's Wheatstone bridge configuration and differential magnetic field signaling ensure excellent EMC performance against all relevant standards. NVE conducted compliance tests in the categories below:

### EN50081-1

Residential, Commercial & Light Industrial

Methods EN55022, EN55014

### EN50082-2: Industrial Environment

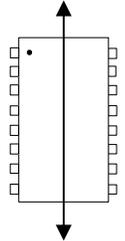

Methods EN61000-4-2 (ESD), EN61000-4-3 (Electromagnetic Field Immunity), EN61000-4-4 (Electrical Transient Immunity),

EN61000-4-6 (RFI Immunity), EN61000-4-8 (Power Frequency Magnetic Field Immunity), EN61000-4-9 (Pulsed Magnetic

Field), EN61000-4-10 (Damped Oscillatory Magnetic Field)

### ENV50204

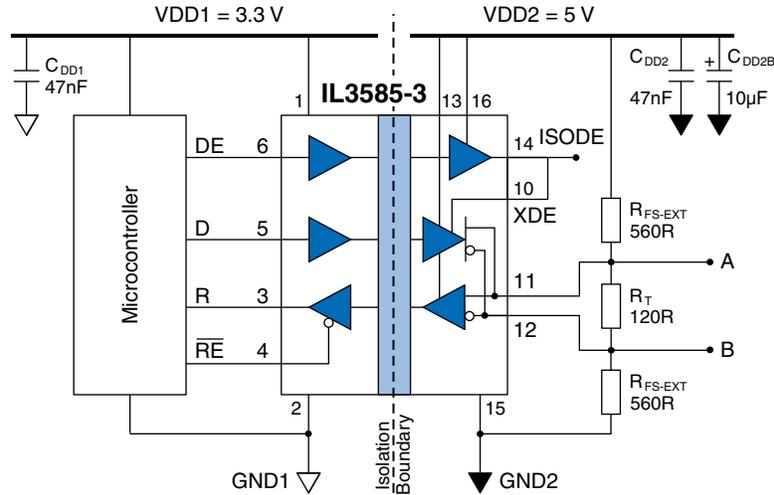

Radiated Field from Digital Telephones (Immunity Test)

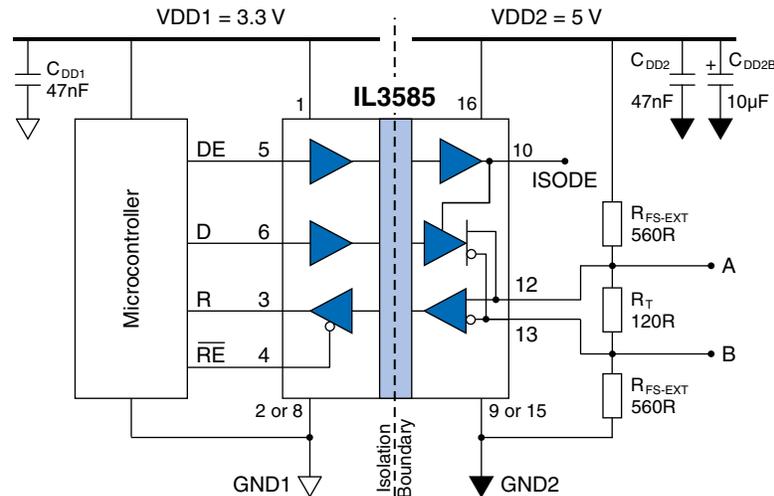

Immunity to external magnetic fields is even higher if the field direction is “end-to-end” (rather than to “pin-to-pin”) as shown in the diagram above.

**Application Information**

Figures 1a and 1b show typical connections to a microcontroller for the narrow-body and wide-body versions. The schematics include typical termination and fail-safe resistors, and power supply decoupling capacitors:

**Figure 1a. Typical narrow-body connections.**

**Figure 1b. Typical wide-body connections.**

*Receiver Features*

The receiver output “R” has tri-state capability via the active low  $\overline{RE}$  input.

*Driver Features*

The RS-485 driver has a differential output and delivers at least 2.1 V across a 54 Ω load. Drivers feature low propagation delay skew to maximize bit width and minimize EMI. Drivers have tri-state capability via the active-high DE input.

*Receiver Data Rate, Cables and Terminations*

The IL3585 is intended for networks up to 4,000 feet (1,200 m), but the maximum data rate decreases as cable length increases. Twisted pair cable should be used in all networks since they tend to pick up noise and other electromagnetically induced voltages as common mode signals, which are effectively rejected by the differential receiver.

**Fail-Safe Operation**

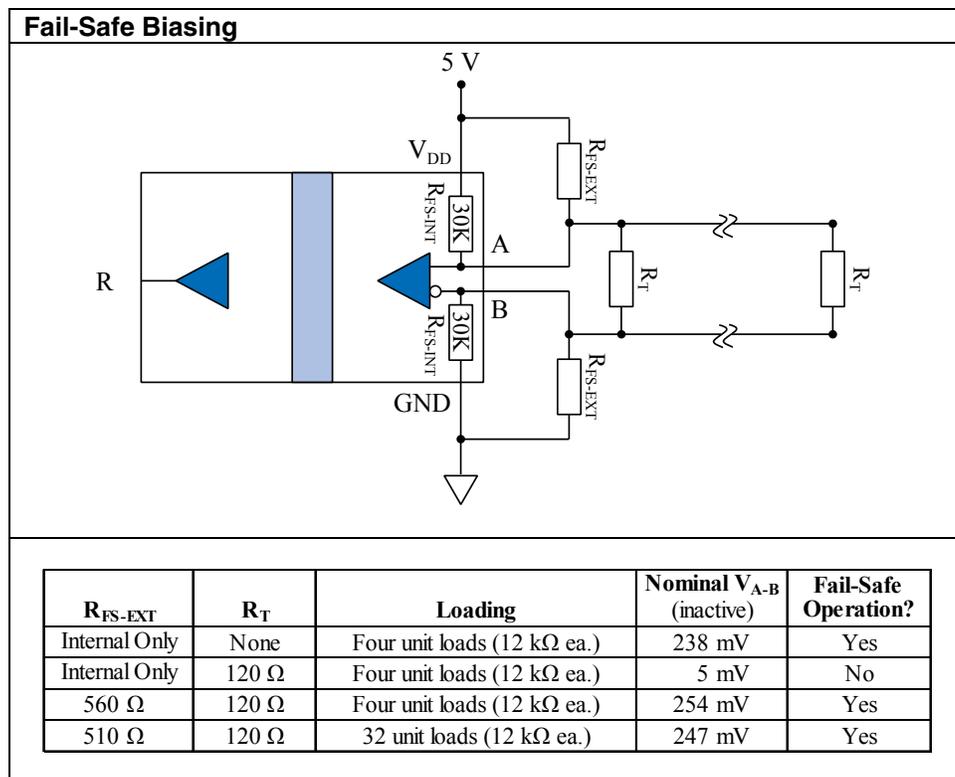

“Fail-safe operation” is defined here as the forcing of a logic high state on the “R” output in response to an open-circuit condition between the “A” and “B” lines of the bus, or when no drivers are active on the bus.

Proper biasing can ensure fail-safe operation, that is a known state when there are no active drivers on the bus. IL3000-Series Isolated Transceivers include internal pull-up and pull-down resistors of approximately 30 kΩ in the receiver section ( $R_{FS-INT}$ ; see figure below). These internal resistors are designed to ensure failsafe operation but only if there are no termination resistors. The entire  $V_{DD}$  will appear between inputs “A” and “B” if there is no loading and no termination resistors, and there will be more than the required 200 mV with up to four RS-485 worst-case Unit Loads of 12 kΩ. Many designs operating below 1 Mbps or less than 1,000 feet are unterminated. Termination resistors may not be necessary for very low data rates and very short cable runs because reflections have time to settle before data sampling, which occurs at the middle of the bit interval.

In busses with low-impedance termination resistors however, the differential voltage across the conductor pair will be close to zero with no active drivers. In this case the state of the bus is indeterminate, and the idle bus will be susceptible to noise. For example, with 120 Ω termination resistors ( $R_T$ ) on each end of the cable, and four Unit Loads (12 kΩ each), without external fail-safe biasing resistors the internal pull-up and pull-down resistors will produce a voltage between inputs “A” and “B” of only about 5 mV. This is not nearly enough to ensure a known state. External fail-safe biasing resistors ( $R_{FS-EXT}$ ) at one end of the bus can ensure fail-safe operation with a terminated bus. Resistors should be selected so that under worst-case power supply and resistor tolerances there is at least 200 mV across the conductor pair with no active drivers to meet the input sensitivity specification of the RS-485 standard.

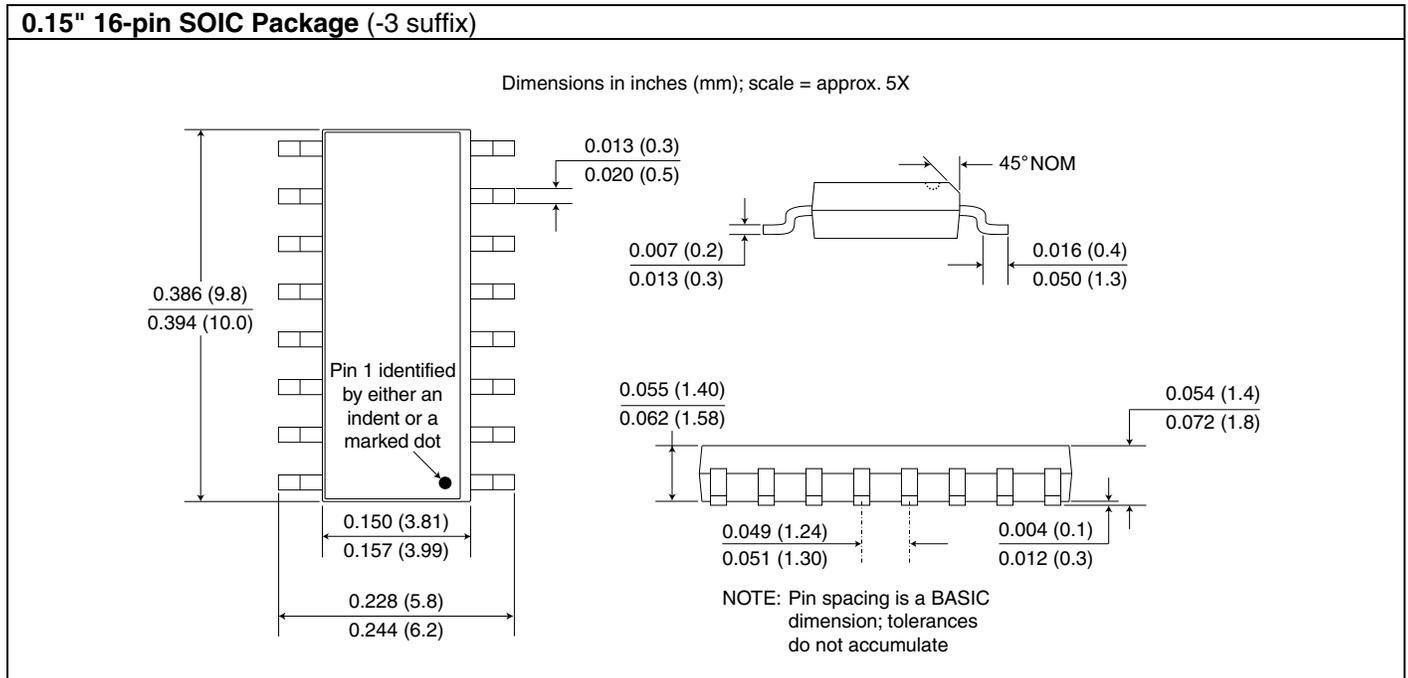

Using the same value for pull-up and pull-down biasing resistors maintains balance for positive- and negative going transitions. Lower-value resistors increase inactive noise immunity at the expense of quiescent power consumption. Note that each Unit Load on the bus adds a worst-case loading of 12 kΩ across the conductor pair, and 32 Unit Loads add 375 Ω worst-case loading. The more loads on the bus, the lower the required values of the biasing resistors.

In the example with two 120 Ω termination resistors and four Unit Loads, 560 Ω external biasing resistors provide more than 200 mV between “A” and “B” with adequate margin for power supply variations and resistor tolerances. This ensures a known state when there are no active drivers. Other illustrative examples are shown in the table below:

## Revision History

---

**ISB-DS-001-IL3585-U**  
**August 2015**

**Change**

- Updated VDE certification standard to VDE V 0884-10.
- Upgraded “V” Version Surge Immunity specification to 12.8 kV.
- Upgraded “V” Version VDE 0884-10 rating to reinforced insulation.

**ISB-DS-001-IL3585-T**

**Change**

- Increased V-Series isolation voltage to 6 kV<sub>RMS</sub>.
- Increased typ. Total Barrier Thickness specification to 0.016 mm.
- Increased CTI min. specification to  $\geq 600$  V<sub>RMS</sub>.

**ISB-DS-001-IL3585-S**

**Change**

- Increase V-Series surge voltage specification to 10 kV.
- Upgraded V-Series safety and approval from IEC 60747-5-5 (VDE 0884) to VDE 0884-10.

**ISB-DS-001-IL3585-R**

**Change**

- Added V-Series versions (5 kVrms isolation / 1000 Vrms working voltage)

**ISB-DS-001-IL3585-Q**

**Change**

- IEC 60747-5-5 (VDE 0884) certification.
- Upgraded from MSL 2 to MSL 1.

**ISB-DS-001-IL3585-P**

**Change**

- Increased transient immunity specifications based on additional data.
- Added VDE 0884 pending.
- Added transient immunity specifications.
- Added high voltage endurance specification.
- Increased magnetic immunity specifications.
- Updated package drawings.
- Added recommended solder pad layouts.

**ISB-DS-001-IL3585-O**

**Change**

- Added thermal characteristics (p. 2).
- Cosmetic changes.

### **Datasheet Limitations**

The information and data provided in datasheets shall define the specification of the product as agreed between NVE and its customer, unless NVE and customer have explicitly agreed otherwise in writing. All specifications are based on NVE test protocols. In no event however, shall an agreement be valid in which the NVE product is deemed to offer functions and qualities beyond those described in the datasheet.

### **Limited Warranty and Liability**

Information in this document is believed to be accurate and reliable. However, NVE does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

In no event shall NVE be liable for any indirect, incidental, punitive, special or consequential damages (including, without limitation, lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

### **Right to Make Changes**

NVE reserves the right to make changes to information published in this document including, without limitation, specifications and product descriptions at any time and without notice. This document supersedes and replaces all information supplied prior to its publication.

### **Use in Life-Critical or Safety-Critical Applications**

Unless NVE and a customer explicitly agree otherwise in writing, NVE products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical devices or equipment. NVE accepts no liability for inclusion or use of NVE products in such applications and such inclusion or use is at the customer's own risk. Should the customer use NVE products for such application whether authorized by NVE or not, the customer shall indemnify and hold NVE harmless against all claims and damages.

### **Applications**

Applications described in this datasheet are illustrative only. NVE makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NVE products, and NVE accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NVE product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customers. Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NVE does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customers. The customer is responsible for all necessary testing for the customer's applications and products using NVE products in order to avoid a default of the applications and the products or of the application or use by customer's third party customers. NVE accepts no liability in this respect.

### **Limiting Values**

Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and operation of the device at these or any other conditions above those given in the recommended operating conditions of the datasheet is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

### **Terms and Conditions of Sale**

In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NVE hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NVE products by customer.

### **No Offer to Sell or License**

Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

### **Export Control**

This document as well as the items described herein may be subject to export control regulations. Export might require a prior authorization from national authorities.

### **Automotive Qualified Products**

Unless the datasheet expressly states that a specific NVE product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NVE accepts no liability for inclusion or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NVE's warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond NVE's specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NVE for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NVE's standard warranty and NVE's product specifications.
