

Step Motor Driver (Pulse Input Type) For Step Motor Series *LECPA*

RoHS

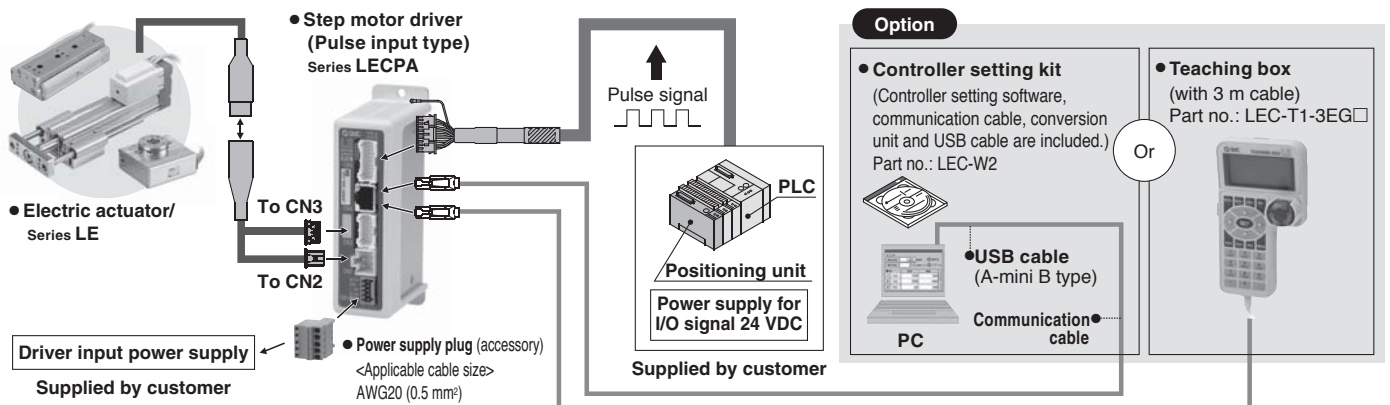

- A driver that uses pulse signals to allow positioning at any position. The actuator can be controlled from the customers' positioning unit.

- **Return-to-origin command signal**
Enables automatic return-to-origin action.

System Construction

Note) Do not use the power supply of "inrush current prevention type" for the driver power supply.
The power consumption changes depending on the actuator model. Refer to the specifications of actuator for more details.
