Compact Guide Cylinder

Ø 12, Ø 16, Ø 20, Ø 25, Ø 32, Ø 40, Ø 50, Ø 63, Ø 80, Ø 100

Up to

24 %
Weight reduced!

Weight reduced by up to 24 % with a shorter guide rod and thinner plate

3 types of bearing can be selected.

Slide bearing

Series MGPM

Ball bushing

Series MGPL

High precision ball bushing

Series MGPA

New

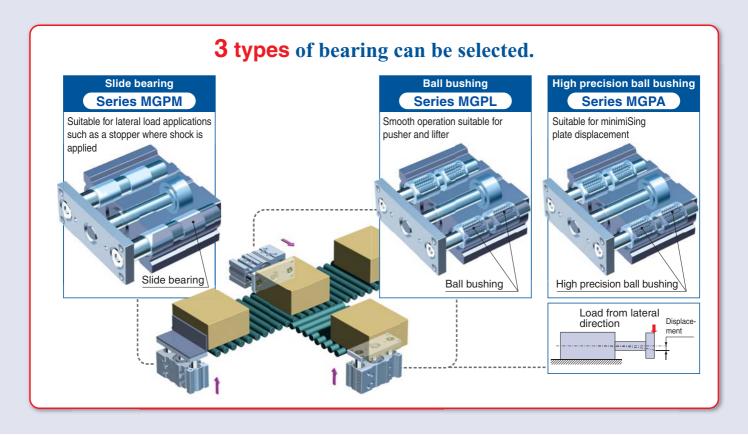

- Cylinder with stable lubrication function (Lube-retainer) and Guide unit with Lube-retainer added.
- Made to Order: Shock absorber soft type series RJ type (-XB22) and Spatter resistant specification (-XC88, 89, 91) added.

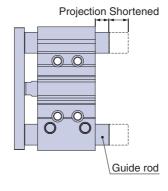

Basic Type

■Weight reduced by up to 17 % ■Guide rod shortened

Bore size [mm]	Reduction rate [%]	Weight [kg]
Ø 12	11	0.25
Ø 16	3	0.37
Ø 20	12	0.59
Ø 25	12	0.84
Ø 32	17	1.41

- *1: Water resistant type auto switches are mountable on the above models, but in such case SMC cannot quarantee water resistance A water resistant type cylinder is recommended for use in an environment which requires water resistance.
 - However, please contact SMC for water resistant products of Ø 12 and Ø 16.
- *2: The D-P3DWA□ is mountable on bore size Ø 25 to Ø 100. *3: 1 m type lead wire is only applicable to the D-A93.
- *: Lead wire length symbols: 0.5 m------(Example) M9NW
 - $1\ m{-}{\cdots}{\cdot} M$ (Example) M9NWM
- *: Solid state auto switches marked with " O " are produced upon receipt of order.
- 3 m L (Example) M9NWL $5\;m{\cdots}{\cdots}\;Z$ (Example) M9NWZ
- *: Since there are other applicable auto switches than listed above, refer to page 66 for details.
- *: For details about auto switches with pre-wired connector, refer to the Auto Switch Guide.
- For the D-P3DWA□, refer to the Auto Switch Guide.
- *: Auto switches are shipped together, (but not assembled)

Specifications

Bore size [mm]	12	16	20	25	32	40	50	63	80	100

Manufacture of Intermediate Strokes

Spacer installation type

Ø 12, Ø 16

Ø 20, Ø 25, Ø 32

Ø 40 to Ø 100

Part no.: MGPM20-39Z

Spacers are installed in the standard stroke cylinder.

• Ø 12 to Ø 32: Available in 1 mm stroke increments

• Ø 40 to Ø 100: Available in 5 mm stroke increments

Refer to How to Order for the standard model numbers

A spacer 1 mm in width is installed in the

MGPM20-40. C dimension is 77 mm.

Made to Order

2 Water Resistant Cylinder

Ideal for use in a machine tool environment exposed to coolants. Applicable for use in an environment with water splashing such as food processing and car wash equipment, etc.

How to Order

- *: Stainless steel parts are available as made-to-order products.
- *: Piston rod and guide rod are made of stainless steel.
- *: Please contact SMC when using liquids that contain sulfur.

High Precision Ball Bushing/MGPA

⚠ Caution

Positioning accuracy for pin hole on the plate

Dispersion of dimensions when machining each component will be accumulated in the plate pin hole positioning accuracy when mounting this cylinder. Values below are referred as a guide.

 $\mathbf{A} = \boxed{\text{Catalogue dimension}} \pm (0.1 + \mathbf{L}_1 \times 0.0008) \text{ [mm]}$

*: To be 0.15 for Ø 80, Ø 100

Note) Displacement by load and self-weight deflection by plate and guide rod are not included.

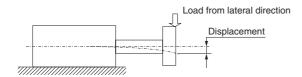

[Bottom mounting]

 $\mathbf{B} = \pm (0.045 + \mathbf{L}_2 \times 0.0016) \text{ [mm]}$

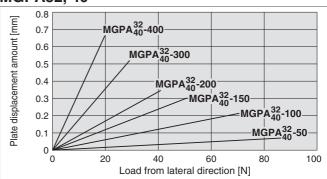

High Precision Ball Bushing/MGPA Plate Displacement Amount (Reference Values)

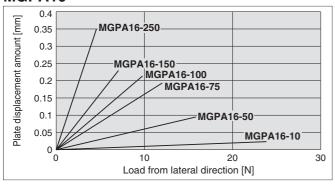

MGPA12

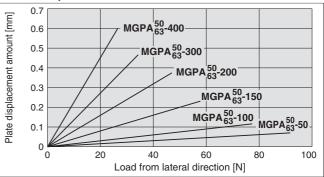

MGPA32, 40

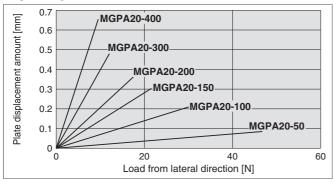

MGPA16

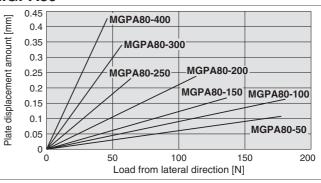

MGPA50, 63

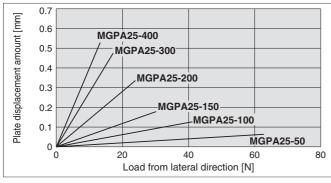

MGPA20

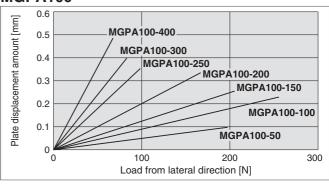

MGPA80

MGPA25

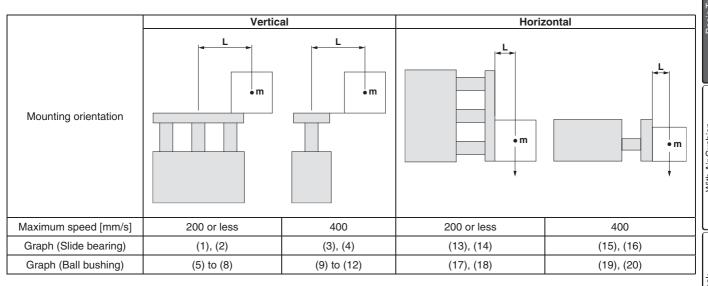

MGPA100

- *: The guide rod and self-weight for the plate are not included in the above displacement values.
- *: Allowable rotating torque, and operating range when used as a lifter, are the same as those of the MGPL series.

Basic Type Series MGP Model Selection

Selection Conditions

Selection Example 1 (Vertical Mounting)

Selection conditions

Mounting: Vertical Bearing type: Ball bushing

Stroke: 30 stroke

Maximum speed: 200 mm/s

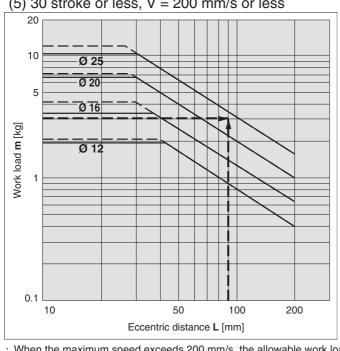

Work load: 3 kg

Eccentric distance: 90 mm

Find the point of intersection for the work load of 3 kg and the eccentric distance of 90 mm on graph (5), based on vertical mounting, ball bushing, 30 stroke, and the speed of 200 mm/s.

→ MGPL25-30Z is selected.

(5) 30 stroke or less, V = 200 mm/s or less

Selection Example 2 (Horizontal Mounting)

Selection conditions

Mounting: Horizontal Bearing type: Slide bearing

Distance between plate and load centre of gravity: 50 mm

Maximum speed: 200 mm/s

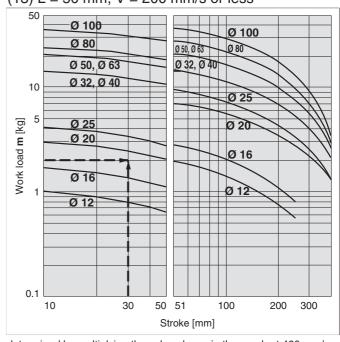

Work load: 2 kg

Stroke: 30 stroke

Find the point of intersection for the work load of 2 kg and 30 stroke on graph (13), based on horizontal mounting, slide bearing, the distance of 50 mm between the plate and load centre of gravity, and the speed of 200 mm/s.

→ MGPM20-30Z is selected.

(13) L = 50 mm, V = 200 mm/s or less

When the maximum speed exceeds 200 mm/s, the allowable work load is determined by multiplying the value shown in the graph at 400 mm/s by the coefficient listed in the table below.

Max. speed	Up to 300 mm/s	Up to 400 mm/s	Up to 500 mm/s
Coefficient	1.7	1	0.6

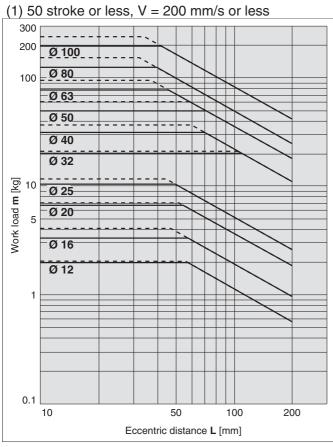

[·] Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

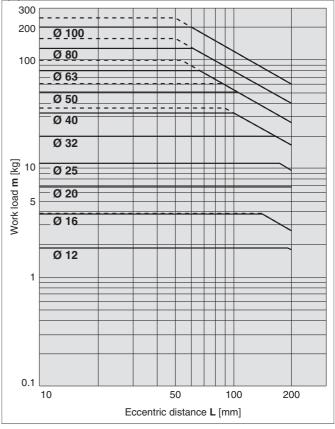

Vertical Mounting Slide Bearing

MGPL32 to 63, MGPA32 to 63

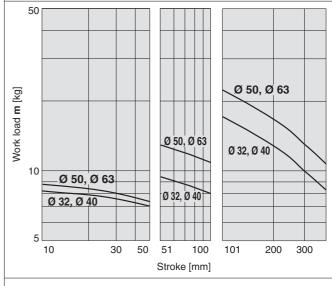

MGPL80/100, MGPA80/100

Operating Range when Used as Stopper

Bore Size: \emptyset 12 to \emptyset 25/MGPM12 to 25 (Slide Bearing)

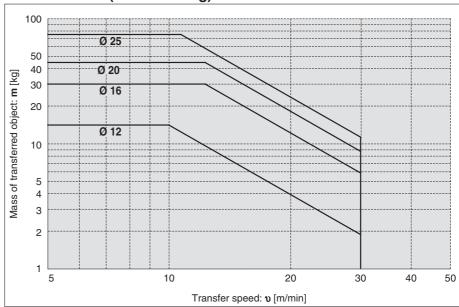

*: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.

△ Caution

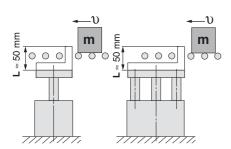

Caution on handling

- 1. When using as a stopper, select a model with 30 stroke or less.
- The MGPL (Ball bushing) and the MGPA (High precision ball bushing) cannot be used as a stopper.

MGPM12 to 25 (Slide Bearing)

Bore Size: Ø 32 to Ø 100/MGPM32 to 100 (Slide Bearing)

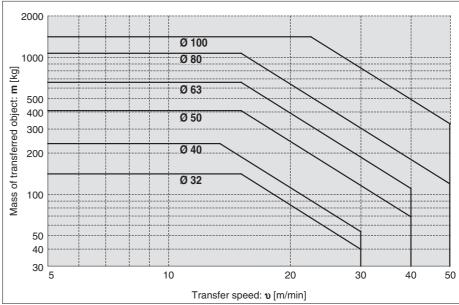

*: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.

△ Caution

Caution on handling

- 1. When using as a stopper, select a model with 50 stroke or less.
- The MGPL (Ball bushing) and the MGPA (High precision ball bushing) cannot be used as a stopper.

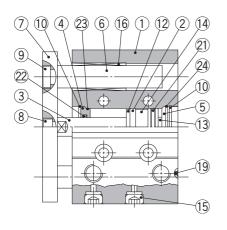

MGPM32 to 100 (Slide Bearing)

*: Refer to graphs (13) and (15) if line pressure is applied by a roller conveyor after the workpiece is stopped.

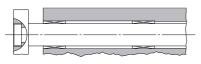

Construction/Series MGPM

MGPM12 to 25

 \emptyset 12 to \emptyset 25 50 stroke or less

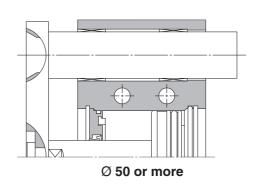

Ø 12 to Ø 25 Over 50 stroke

MGPM32 to 100

Ø 63 or more

Component Parts

[mm]

Ø 12 to Ø 25/MGPM, MGPL, MGPA

- *1: Refer to Section EE details for the shape of Ø 12 to Ø 25 with stroke of 50 or less.
- *: The use of a slot (width XA, length XB, depth 3) allows for a relaxed pin pitch tolerance, with the pin hole (Ø XAH9, depth 6) as the reference, without affecting mounting accuracy.
- *: For intermediate strokes other than standard strokes, refer to Manufacture of Intermediate Strokes on page 10.
- *: For bore size Ø 12 and Ø 16, only M5 x 0.8 port is available.
- *: For bore size Ø 20 or more, choice of Rc, NPT, G port is available. (Refer to page 9.)

- *1: Water resistant type auto switches are mountable on the above models, but in such case SMC cannot quarantee water resistance.
- A water resistant type cylinder is recommended for use in an environment which requires water resistance.
- However, please contact SMC for water resistant products of Ø 12 and Ø 16.

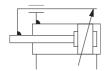

5 m..... Z

- *2: The D-P3DWA□ is mountable on bore size Ø 25 to Ø 100. *3: 1 m type lead wire is only applicable to the D-A93.
- *: Lead wire length symbols: 0.5 m-------(Example) M9NW
 - 1 m..... M (Example) M9NWM 3 m----- L (Example) M9NWL
- *: Solid state auto switches marked with "O" are produced upon receipt of order.
- (Example) M9NWZ *: Since there are other applicable auto switches than listed above, refer to page 66 for details.
- *: For details about auto switches with pre-wired connector, refer to the Auto Switch Guide.
- For the D-P3DWA□, refer to the Auto Switch Guide.
- *: Auto switches are shipped together, (but not assembled).

Symbol Air cushion

Made to Order (For details, refer to pages 72 to 89.)

Symbol	Specifications
-XC19	Intermediate stroke (Spacer type)
-XC79	Tapped hole, drilled hole, pinned hole machined additionally
-XC85	Grease for food processing equipment
-X144	Symmetrical port position *1
-X867	Side porting type (Plug location changed)

*1: The shape is the same as the current product.

Refer to pages 63 to 67 for cylinders with auto switches.

- Auto switch proper mounting position (detection at stroke end) and its mounting height
- · Minimum stroke for auto switch mounting
- Operating range
- Auto switch mounting brackets/Part no.
- Auto Switch Mounting

Specifications

High Precision Ball Bushing/MGPA

∕\Caution

Positioning accuracy for pin hole on the plate

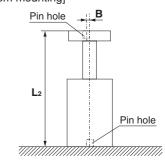

Dispersion of dimensions when machining each component will be accumulated in the plate pin hole positioning accuracy when mounting this cylinder. Values below are referred as a guide.

 $\mathbf{A} = \boxed{\text{Catalogue dimension}} \pm (0.1 + \mathbf{L}_1 \times 0.0008) \text{ [mm]}$

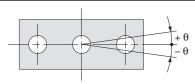

- *1: To be 0.15 for Ø 80, Ø 100
- *: Displacement by load and self-weight deflection by plate and guide rod are not included.

[Bottom mounting]

 $\mathbf{B} = \pm (0.045 + \mathbf{L}_2 \times 0.0016) \text{ [mm]}$

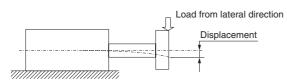

Non-rotating Accuracy of Plate

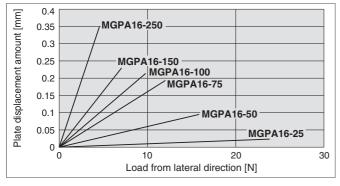

Non-rotating accuracy $\boldsymbol{\theta}$ when retracted and when no load is applied should be not more than the values shown in the table.

Bore size	Non-rotating accuracy θ									
[mm]	MGPM	MGPA								
16	±0.07°	±0.05°								
20	±0.06°	±0.04°								
25	±0.06	±0.04								
32	+0.05°	±0.03°								
40	±0.05		±0.01°							
50	±0.04°	±0.03°								
63	±0.04									
80	±0.03°	±0.03°								
100	±0.03									

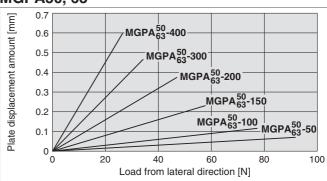

High Precision Ball Bushing/MGPA Plate Displacement Amount (Reference Values)

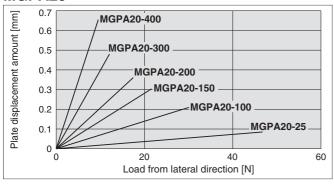

MGPA16

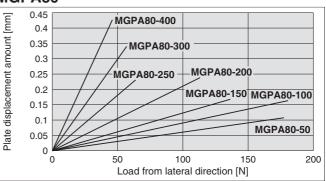

MGPA50, 63

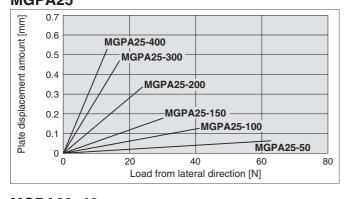

MGPA20

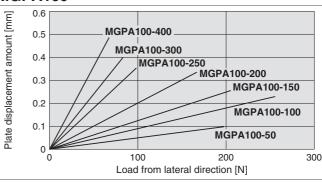

MGPA80

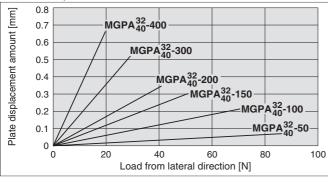

MGPA25

MGPA100

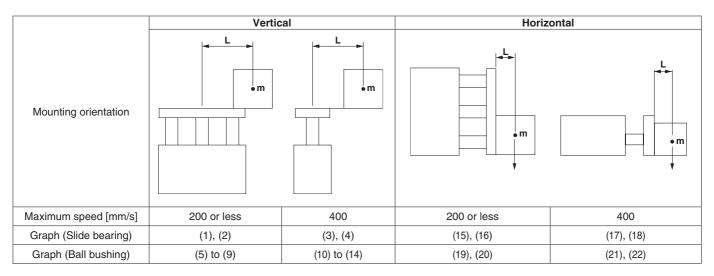

MGPA32, 40

- *: The guide rod and self-weight for the plate are not included in the above displacement values.
- *: Allowable rotating torque, and operating range when used as a lifter, are the same as those of the MGPL series.

With Air Cushion Series MGP Model Selection

Selection Conditions

Selection Example 1 (Vertical Mounting)

Selection conditions

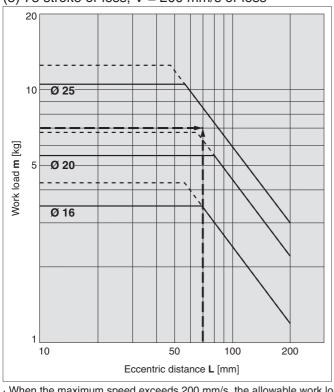

Mounting: Vertical Bearing type: Ball bushing Stroke: 75 stroke Maximum speed: 200 mm/s Work load: 7 kg

Eccentric distance: 70 mm

Find the point of intersection for the work load of 7 kg and the eccentric distance of 70 mm on graph (5), based on vertical mounting, ball bushing, 75 mm stroke, and the speed of 200 mm/s.

→MGPL25-75AZ is selected.

(5) 75 stroke or less, V = 200 mm/s or less

Selection Example 2 (Horizontal Mounting)

Selection conditions

Mounting: Horizontal
Bearing type: Slide bearing

Distance between plate and load centre of gravity: 40 mm

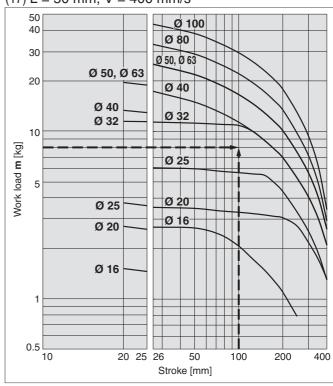

Maximum speed: 400 mm/s

Work load: 8 kg Stroke: 100 stroke

Find the point of intersection for the work load of 8 kg and 100 stroke on graph (17), based on horizontal mounting, slide bearing, the distance of 40 mm between the plate and load centre of gravity, and the speed of 400 mm/s.

→MGPM32-100AZ is selected.

(17) L = 50 mm, V = 400 mm/s

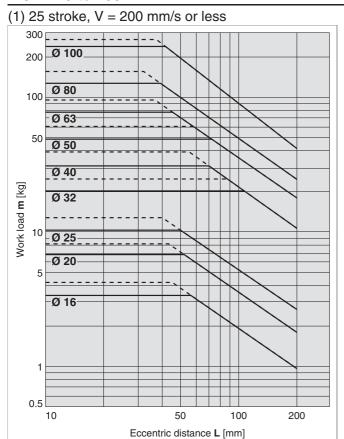

· When the maximum speed exceeds 200 mm/s, the allowable work load is determined by multiplying the value shown in the graph at 400 mm/s by the coefficient listed in the table below.

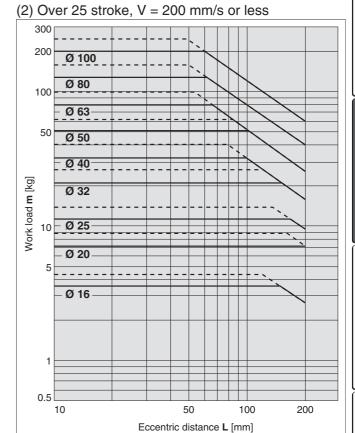

Maximum	Up to 300 mm/s	Up to 400 mm/s	Up to 500 mm/s
Coefficient	1.7	1	0.6

 $[\]cdot$ Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

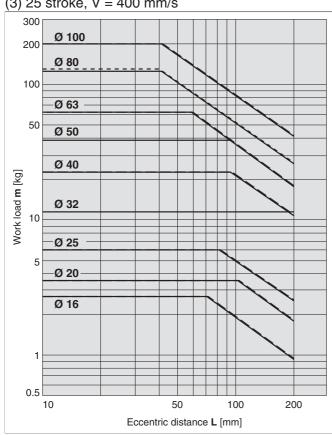

Operating pressure 0.4 MPa
--- Operating pressure 0.5 MPa or more

MGPM16 to 100

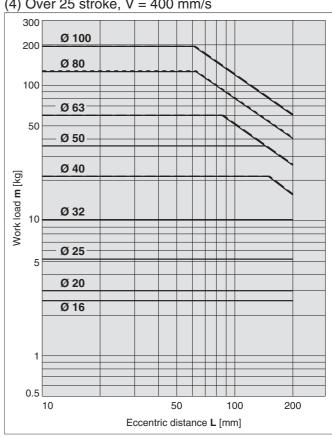

[·] Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

Heavy Duty Guide Rod Type MGPS

(22) L = 100 mm, V = 400 mm/s

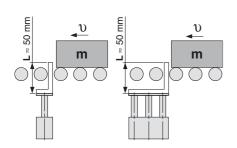

MGPL32 to 63

MGPL80/100

Bore Size Ø 16 to Ø 25/MGPM16 to 25 (Slide Bearing)

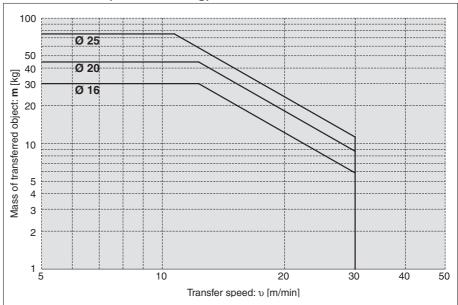

*: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.

△ Caution

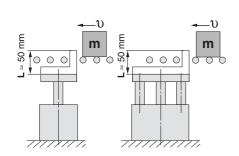

Caution on handling

- 1. When using as a stopper, select a model with 25 stroke or less.
- The MGPL (Ball bushing) and the MGPA (High precision ball bushing) cannot be used as a stopper.

MGPM16 to 25 (Slide Bearing)

Bore Size Ø 32 to Ø 100/MGPM32 to 100 (Slide Bearing)

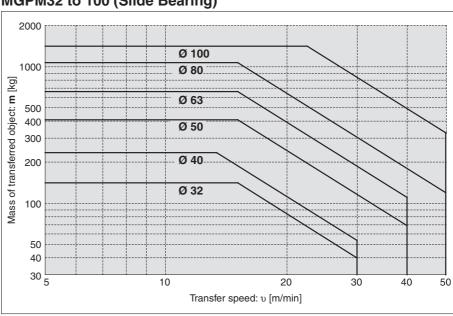

*: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.

△ Caution

Caution on handling

- 1. When using as a stopper, select a model with 50 stroke or less.
- The MGPL (Ball bushing) and the MGPA (High precision ball bushing) cannot be used as a stopper.

MGPM32 to 100 (Slide Bearing)

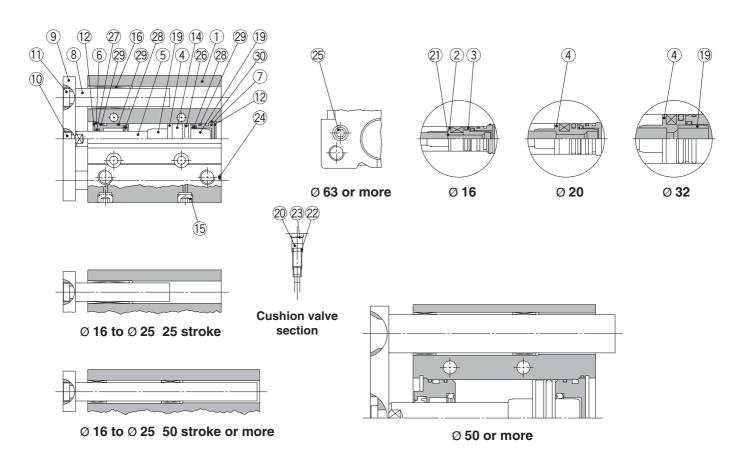

*: Refer to graphs (15) and (17) if line pressure is applied by a roller conveyor after the workpiece is stopped.

- *1: Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance. Please consult with SMC regarding water resistant types with the above model numbers.
- *2: 1 m type lead wire is only applicable to the D-A93.
- *: Lead wire length symbols: 0.5 m------(Example) M9NW 1 m----- M (Example) M9NWM (Example) M9NWL 3 m..... L 5 m..... Z (Example) M9NWZ
- *: Solid state auto switches marked with "O" are produced upon receipt of order.
- *: Bore sizes 32 to 100 are available for D-P4DW *: Bore sizes 25 to 100 are available for D-P3DWA ...
- *: Since there are other applicable auto switches than listed above, refer to page 66 for details.
- *: For details about auto switches with pre-wired connector, refer to the Auto Switch Guide. For D-P3DWA□, refer to the Auto Switch Guide
- *: Auto switches are shipped together, (but not assembled)

Symbol Rubber bumper

Made to Order (For details, refer to pages 72 and 89.)

Symbol	Symbol Specifications						
-XC79	Tapped hole, drilled hole, pinned hole machined additionally *1						
-X867	Side porting type (Plug location changed) *1						

*1: The shape is the same as the current product.

Refer to pages 63 to 67 for cylinders with auto switches.

- Minimum stroke for auto switch mounting
- Auto switch proper mounting position (detection at stroke end) and its mounting height
- Operating range
- Auto switch mounting brackets/Part no.
- Auto switch mounting

Specifications

Bore size [mm]	20	25	32	40	50	63	80	100
Action				Double	acting			
Fluid	Air							
Proof pressure	1.5 MPa							
Maximum operating pressure	operating pressure 1.0 MPa							
Minimum operating pressure				0.15 N	//Pa *1			
Ambient and fluid temperature			-10 to	0 60 °C	(No free	ezing)		
Piston speed *2	50 to 500 mm/s						50 to 40	00 mm/s
Cushion	Rubber bumper on both ends							
Lubrication	Not required (Non-lube)							
Stroke length tolerance	+1.5 +0 mm							

- *1: 0.1 MPa except the lock unit.
- *2: Maximum speed with no load. Depending on the operating conditions, the piston speed may not be satisfied. Make a model selection, considering a load according to the graph on pages 16 to 22.

Lock Specifications

Backlash	2 mm or less									
Manual release		Non-lock type, Lock type								

Adjust switch positions for operation at both the stroke end and backlash (2 mm) movement positions.

Standard Strokes

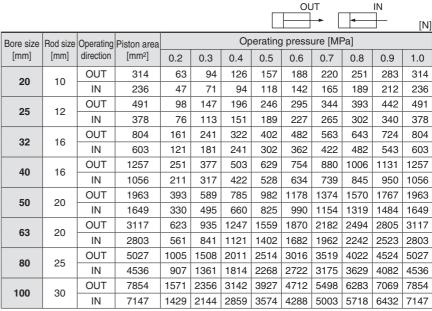

Bore size [mm]	Standard stroke [mm]							
20, 25, 32, 40, 50, 63, 80, 100	25, 50, 75, 100, 125, 150, 175, 200, 250, 300, 350, 400							

Manufacture of Intermediate Stroke

Description	Spacer installation type. Dealing with the stroke in 5 mm increments is available by installing spacer with standard stroke cylinder. When a spacer is mounted on the cylinder with an end lock on the rod side, use a special piston rod.
Part no.	Refer to "How to Order" for the standard model numbers on page 46.
Applicable stroke [mm]	5 to 395
Example	Part no.: MGPM50-35-HN A spacer 15 mm in width is installed in a MGPM50-50-HN. C dimension is 119 mm.

- *: The minimum stroke for mounting auto switches is 10 stroke or more for two switches, and 5 stroke or more for one switch.
- *: Intermediate stroke (in 1 mm increments) based on an exclusive body will be available upon request for special.

Theoretical Output

^{*:} Theoretical output [N] = Pressure [MPa] x Piston area [mm²]

[kg]

[kg]

Series MGP With End Lock

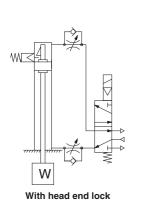

Specific Product Precautions

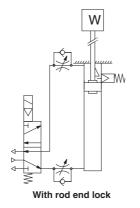

Be sure to read this before handling. Refer to the back cover for Safety Instructions. For Actuator and Auto Switch Precautions, refer to Handling Precautions for SMC Products and the Operation Manual on the SMC website, http://www.smc.eu

Use Recommended Air Pressure Circuit.

∕!∖Caution

• It is necessary for proper locking and unlocking.

Handling

. Caution

1. Do not use a 3 position solenoid valve.

Avoid using this cylinder in combination with a 3 position solenoid valve (particularly the closed centre metal seal type). If air pressure becomes sealed inside the port on the side that contains the lock mechanism, the lock will not engage. Even if the lock is engaged at first, the air that leaks from the solenoid valve could enter the cylinder and cause the lock to disengage as time elapses.

2. Back pressure is necessary for unlocking.

Before starting, make sure that air is supplied to the side that is not equipped with a lock mechanism as shown in the diagram above. Otherwise, the lock may not disengage. (Refer to "Rock Disengagement".)

3. Disengage the lock before installing or adjusting the cylinder.

The lock could become damaged if the cylinder is installed with its lock engaged.

- 4. Operate the cylinder at a load ratio of 50 % or less. The lock might not disengage or might become damaged if a load ratio of 50 % is exceeded.
- 5. Do not synchronize multiple cylinders.

Do not operate two or more end lock cylinders synchronised to move a single workpiece because one of the cylinder locks may not be able to disengage when required.

6. Operate the speed controller under meterout control.

If operated under meter-in control, the lock might not disengage.

7. On the side that has a lock, make sure to operate at the stroke end of the cylinder.

The lock might not engage or disengage if the piston of the cylinder has not reached the stroke end.

- 8. Do not use the air cylinder as an air-hydro cylinder. This may result in oil leak.
- 9. The position adjustment of the auto switch should be performed at two positions; a position determined by the stroke and a position after the backlash movement (by 2 mm).

When a 2-colour indication auto switch is adjusted to show green at the stroke end, the indication may turn red when the cylinder returns by the backlash. This, however, is not an error.

Operating Pressure

1. Supply air pressure of 0.15 MPa or higher to the port on the side that has the lock mechanism, as it is necessary for disengaging the lock.

Exhaust Air Speed

⚠ Caution

1. The lock will engage automatically if the air pressure at the port on the side that has the lock mechanism becomes 0.05 MPa or less. Be aware that if the piping on the side that has the lock mechanism is narrow and long, or if the speed controller is located far from the cylinder port, the exhaust air speed could become slower, involving a longer time for the lock to engage. A similar result will ensure if the silencer that is installed on the exhaust port of the solenoid valve becomes clogged.

Lock Disengagement

⊈\Warning

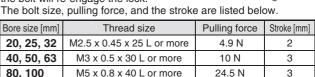

1. To disengage the lock, make sure to supply air pressure to the port on the side without a lock mechanism, thus preventing the load from being applied to the lock mechanism. (Refer to the recommended air pressure circuit.) If the lock is disengaged when the port on the side that does not contain a lock mechanism is in the exhausted state and the load is being applied to the lock mechanism, undue force will be applied to the lock mechanism, and it may damage the lock mechanism. Also, it could be extremely dangerous, because the piston rod could move suddenly.

Manual Disengagement

** ∆** Caution

1. Non-locking style manual release

Insert the bolt, which is provided as an accessory part, through the rubber cap (it is not necessary to remove the rubber cap). Screw the bolt into the lock piston and pull the bolt to disengage the lock. Releasing the bolt will re-engage the lock.

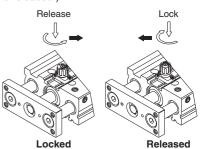

Bolt should be detached under normal operation. otherwise it may cause malfunction of the locking feature.

2. Locking style manual release

Turn 90° counterclockwise while pushing the M/O knob. Lock is released when \blacktriangle on the cap and \blacktriangledown OFF mark on the M/O knob correspond. (Lock remains released.)

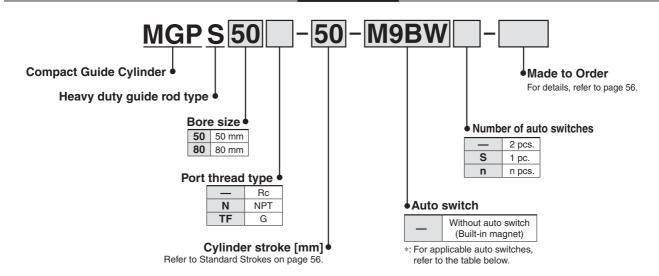

When locking is 90° desired. turn clockwise while fully pushing the M/O knob and correspond ▲ on the cap and ▼ ON mark on the M/O knob. Confirm the correct position by click sound "click". Otherwise, lock may not be engaged.

Compact Guide Cylinder/ Heavy Duty Guide Rod Type Series MGPS Ø 50, Ø 80

How to Order

Applicable Auto Switches/Refer to the Auto Switch Guide for further information on auto switches.

Specifications

Symbol Rubber bumper

Made to Order (For details, refer to page 89.)

Symbol	Specifications
-XC85	Grease for food processing equipment
-X867	Side porting type (Plug location changed) *1

*1: The shape is the same as the current product.

Refer to pages 63 to 67 for cylinders with auto switches.

- Minimum stroke for auto switch mounting
- Auto switch proper mounting position (detection at stroke end) and its mounting height
- Operating range
- Auto switch mounting brackets/Part no.
- Auto switch mounting

Bore size [mm]	50	80					
Action	Double	acting					
Fluid	Air						
Proof pressure	1.5	MРа					
Maximum operating pressure 1.0 MPa							
Minimum operating pressure 0.1 MPa							
Ambient and fluid temperature	−10 to 60 °C	(No freezing)					
Piston speed *1	50 to 40	0 mm/s					
Cushion	Rubber bumpe	r on both ends					
Lubrication Not required (Non-lube)							
Stroke length tolerance	+1.5 +0	mm					

^{*1:} Maximum speed with no load. Depending on the operating conditions, the piston speed may not be satisfied. Make a model selection, considering a load according to the graph on pages 57 to 59.

Standard Strokes

Bore size [mm]	Standard stroke [mm]
50, 80	25, 50, 75, 100, 125, 150, 175, 200

Manufacture of Intermediate Stroke

Description	Spacer installation type Spacers are installed in the standard stroke cylinder. Available in 5 mm stroke increments.
Part no.	Refer to "How to Order" for the standard model numbers on page 55.
Applicable stroke [mm]	5 to 195
Example	Part no.: MGPS50-35 A spacer 15 mm in width is installed in a MGPS50-50. C dimension is 94 mm.

^{*:} Intermediate stroke (in 1 mm increments) based on an exclusive body will be available upon request for special.

80	±0.04°

Model Selection

Selection Conditions

Selection Example 1 (Vertical Mounting)

Selection conditions

Mounting: Vertical

Stroke: 50 stroke

Maximum speed: 200 mm/s

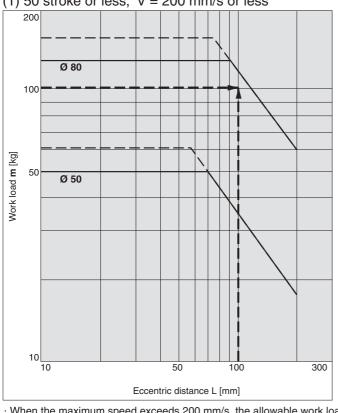

Work load: 100 kg

Eccentric distance: 100 mm

Find the point of intersection for the work load of 100 kg and the eccentric distance of 100 mm on graph 1, based on vertical mounting, 50 mm stroke, and the speed of 200 mm/s.

→MGPS80-50 is selected.

(1) 50 stroke or less, V = 200 mm/s or less

Selection Example 2 (Horizontal Mounting)

Selection conditions

Mounting: Horizontal

Distance between plate and load centre of gravity: 50 mm

Maximum speed: 200 mm/s

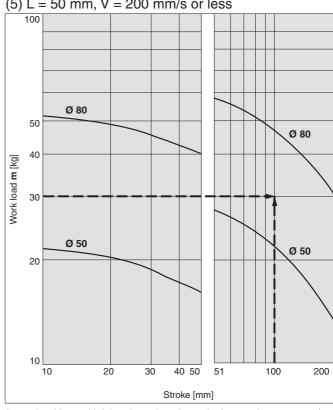

Work load: 30 kg

Stroke: 100 stroke

Find the point of intersection for the work load of 30 kg and 100 stroke on graph 5, based on horizontal mounting, the distance of 50 mm between the plate and load centre of gravity, and the speed of 200 mm/s.

→MGPS80-100 is selected.

(5) L = 50 mm, V = 200 mm/s or less

When the maximum speed exceeds 200 mm/s, the allowable work load is determined by multiplying the value shown in the graph at 400 mm/s by the coefficient listed in the table below.

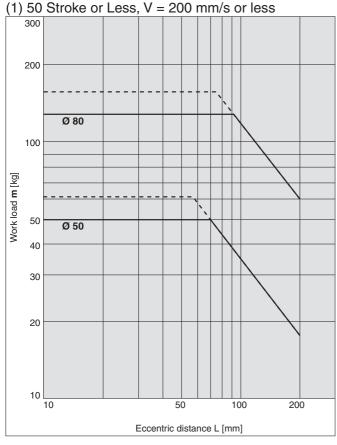

Maximum	Up to 300 mm/s	Up to 400 mm/s	Up to 500 mm/s
Coefficient	1.7	1	0.6

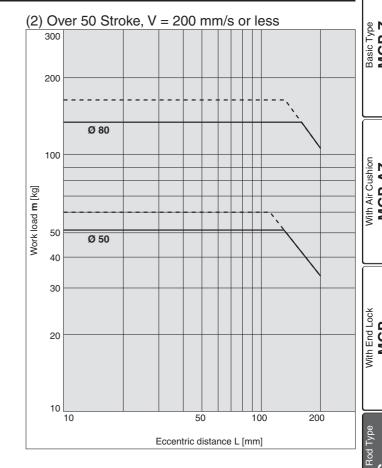

[·] Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

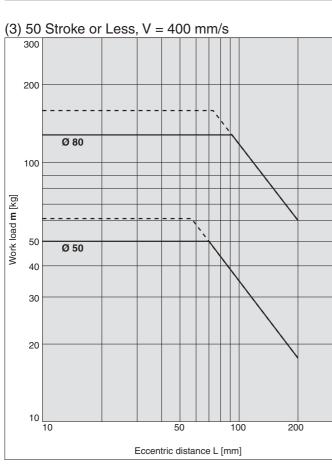

Vertical Mounting Slide Bearing

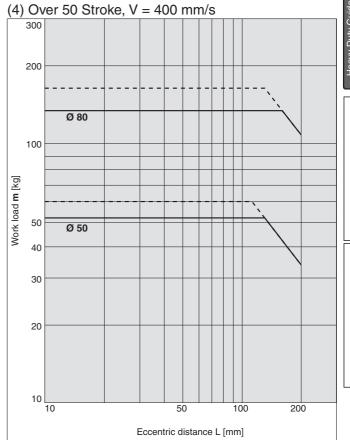

Operating pressure 0.4 MPa
--- Operating pressure 0.5 MPa or more

MGPS50, 80

 $[\]cdot$ Use the Guide Cylinder Selection Software, when the eccentric distance is 200 mm or more.

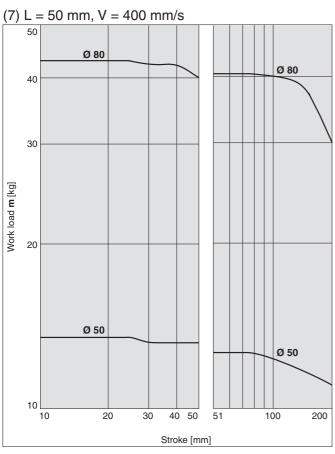

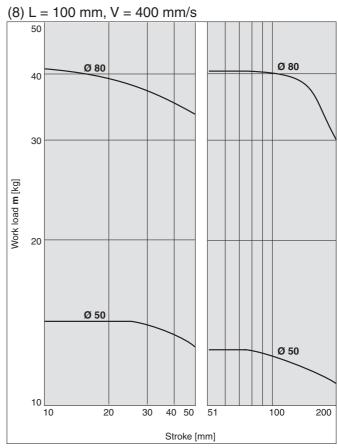

Horizontal Mounting Slide Bearing

MGPS50, 80

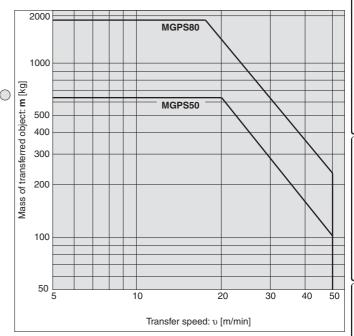

*: When selecting a model with a longer L dimension, be sure to choose a bore size which is sufficiently large.

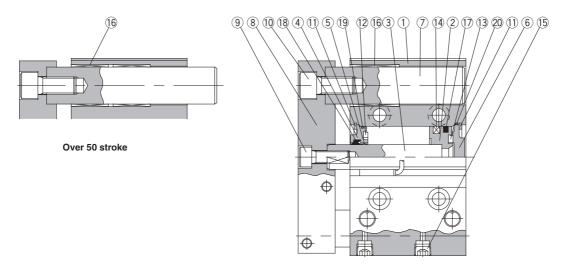

⚠ Caution

Caution on handling

When using as a stopper, select a model with 50 stroke or less.

Construction

50 stroke or less

For D-P3DWA (*: Cannot be mounted on bore size Ø 20.)

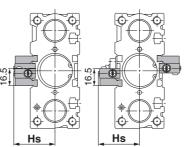

Ø 25 to Ø 63

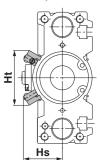

For D-P4DW (*: Cannot be mounted on bore size Ø 25 or less.)

Ø 32 to Ø 63

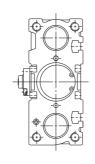

Ø 80, Ø 100

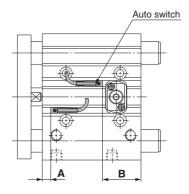

For 25 stroke

*: For bore sizes Ø 40 to Ø 63 with two auto switches, one switch is mounted on each

Mounting of Auto Switch

⚠ Caution

In the case of 25 st or less with head side end lock type, it might not insert auto switch from the rod side.

In this case, install it after removing the plate temporarily.

Regarding the plate removal and the way of assembly, please consult with SMC.

ı

Auto switch mounting surface	
Mounting of auto switch	1. Attach the auto switch to the auto switch mounting bracket with the hexagon socket head cap screw (M3 x 14 L). The tightening torque for the M3 hexagon socket head cap screw is 0.5 to 0.8 N·m. 2. Fix the auto switch mounting nut and the auto switch mounting bracket temporarily by tightening the hexagon socket head cap screw (M2.5 x 5 L). 3. Insert the temporarily fixed auto switch mounting bracket into the auto switch mounting groove, and slide the auto switch through the auto switch mounting groove. 4. Check the detecting position of the auto switch and fix the auto switch firmly with the hexagon socket head cap screw (M2.5 x 5 L). The tightening torque for the M2.5 hexagon socket head cap screw is 0.2 to 0.3 N·m. 5. If the detecting position is changed, go back to step 3. Auto switch Hexagon socket head cap screw Auto switch mounting bracket Auto switch mounting nut

Applicable Cylinder: MGP (With end lock), MGPS

D-P3DWA	BMG2-012					
D-P4DW	_	BMG 1-040				

- *: Cylinders with an end lock are available in Ø 20 to Ø 100.
- *: The heavy duty guide rod type is available in Ø 50 and Ø 80.

^{*:} Auto switch mounting brackets and auto switches are enclosed with the cylinder for shipment. For an environment that needs the water-resistant auto switch, select the D-M9□A(V) type.

Prior to Use Auto Switch Connection and Example

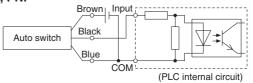

Sink Input Specifications

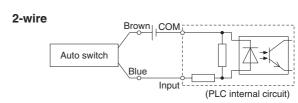

3-wire, NPN Brown Input Black Blue COM

2-wire | Auto switch | Blue | COM | (PLC internal circuit)

Source Input Specifications

3-wire, PNP

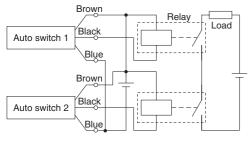

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

Example of AND (Series) and OR (Parallel) Connection

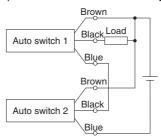

*: When using solid state auto switches, ensure the application is set up so the signals for the first 50 ms are invalid.

(PLC internal circuit)

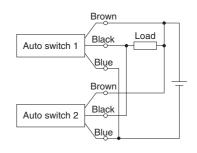

3-wire AND connection for NPN output (Using relays)

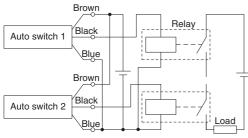

(Performed with auto switches only)

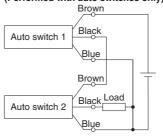

3-wire OR connection for NPN output

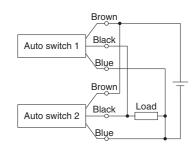

3-wire AND connection for PNP output (Using relays)

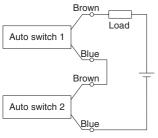

(Performed with auto switches only)

3-wire OR connection for PNP output

2-wire AND connection

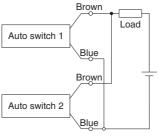

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state.

The indicator lights will light up when both of the auto switches are in the ON state. Auto switches with load voltage less than 20 V cannot be used.

Load voltage at ON = Power supply voltage -Residual voltage x 2 pcs. = 24 V - 4 V x 2 pcs. = 16 V

Example: Power supply is 24 V DC Internal voltage drop in auto switch is 4 V.

2-wire OR connection

(Solid state)
When two auto
switches are
connected in parallel,
malfunction may occur
because the load
voltage will increase
when in the OFF state.

Load voltage at OFF = Leakage current x 2 pcs. x Load impedance = 1 mA x 2 pcs. x 3 k Ω

Example: Load impedance is 3 k Ω . Leakage current from auto switch is 1 mA.

(Reed)
Because there is no current leakage, the load voltage will not increase when turned OFF.
However, depending on the number of auto switches in the ON state, the indicator lights may sometimes grow dim or not light up, due to the dispersion and reduction of the current flowing to the auto switches.

Simple Specials/Made to Order Please contact SMC for detailed specifications, delivery and prices. Made to Order

The following special specifications can be ordered as a simplified Made-to-Order.

The following special specifications can be ordered as a simplified Made-to-Order.

There is a specification sheet available on paper and CD-ROM. Please contact your SMC sales representatives if necessary.

Series MGP Simple Specials

These changes are dealt with Simple Specials System. For details, refer to the **Auto Switch Guide**.

1 Change of Guide Rod End Shape

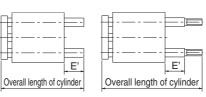

Symbol -XA1/6/17/21

Applicable Series

Description	Model	Action	Symbol for change of rod end shape
	MGPM-Z	Double acting	XA1, 6, 17, 21
Standard type	MGPL-Z	Double acting	XA1, 6
	MGPA-Z	Double acting	AA1, 0

Precautions

- Ensure that the cylinder's overall length should not exceed the allowable overall length. In the case of exceeding the allowable overall length, it will be available as specials.
- In Fig. (1), (2) below, E' dimension cannot make it into E dimension or less of the standard products. Confirm by referring to catalogue.
- SMC will make appropriate arrangements if no dimension, tolerance, or finish instructions are given in the diagram.
- * dimension should be the guide rod diameter (D) 2 mm. In the case that the preferred dimension is different, fill in that dimension.

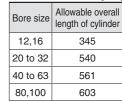

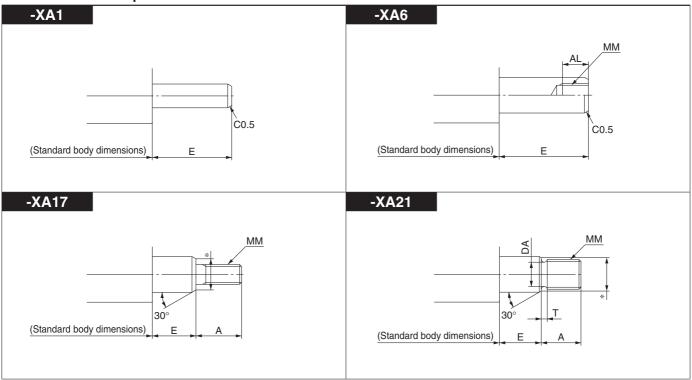

Fig. (1) XA1, XA6 Fig. (2) XA17, XA21

Guide Rod End Shape Pattern

2 Tapped Hole, Drilled Hole, Pinned Hole Machined Additionally

Symbol -XC79

This simple special is meant for machining additionally tapped hole, drilled hole, and pinned hole, as requested from customer, on parts designed largely for mounting a workpiece etc. in the combined air cylinders.

But, for each model, since they have the portions which are impossible to machine additionally, refer to the additional machining limitation.

Applicable Series

Description	Model	Action	Component parts applicable for additional machining
	MGPM-Z	Double acting	
Standard type	MGPL-Z	Double acting	
	MGPA-Z	Double acting	
	MGPM-AZ	Double acting	
With air cushion	MGPL-AZ	Double acting	Plate
	MGPA-AZ	Double acting	
	MGPM	Double acting	
With end lock	MGPL	Double acting	
	MGPA	Double acting	

Precautions

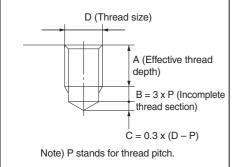

- We cannot take any responsibility as for the intensity of holes machined additionally and the effects of decreased intensity for the product itself.
- It will not be plated again for the machined part additionally.
- Be sure to fill in "through" for through-hole, and "effective depth" for blind hole.
- When using by machining through-hole additionally, ensure that the tip of the bolt etc. for mounting workpiece should not stick into the cylinder side. It may result in an unexpected problem.
- Use caution not to interfere the existing mounting hole on the standard products with the hole to be machined additionally. But it is possible to drill additionally the larger size of hole at the same position as the existing hole.

Common Complementary Explanation/Holes which can be additionally machined are the following 3 types.

Tapped hole

Designated nominal diameter and tapped hole of a pitch are machined additionally. (Maximum nominal thread diameter M20)

Blind hole is deep into the bottom of prepared hole which sums up A to C in the figure below in contrast to the effective depth of tapped hole. When there is a condition which does not allow through-hole etc., leave sufficient thickness in the inner part of hole.

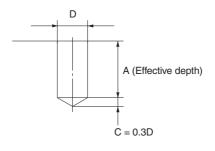

Drilled hole

Drilled hole of a designated internal diameter is machined.

(Maximum hole diameter 20 mm)

If you wish for blind hole, instruct us with effective depth. (Refer to the figure below.) Besides, dimensional accuracy for internal diameter will be ± 0.2 mm.

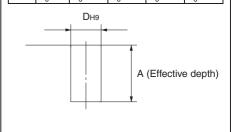

Pinned hole

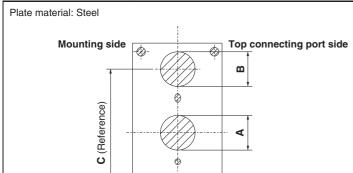

Pinned hole of a designated diameter (reamer hole) is machined. (Maximum hole diameter 20 mm)

Internal dimension tolerates H9 tolerance to the designated hole diameter. (Refer to the table below.)

Hole dia.	3 or less	Over 3 to 6	Over 6 to 10	Over 10 to 18	Over 18 to 20
Tolerance	+0.01	+0.012	+0.015	+0.018	+0.021

Limitation for Machining Additionally/Since the slanted lines denote the restricted range for machining additionally, design the dimensions, referring to below.

Dimensional Range Not Possible to

Machine Additionally

1 Heat Resistant Cylinder (-10 to 150 °C)

Symbol -XB6

Air cylinder which changed the seal material and grease, so that it could be used even at higher temperature up to 150 from -10 °C.

Applicable Series

Description	Model	Action
Standard type	MGPM-Z	Double acting

- *: Operate without lubrication from a pneumatic system lubricator.
- *: Please contact SMC for details on the maintenance intervals for this cylinder, which differ from those of the standard cylinder.
- *: In principle, it is impossible to make built-in magnet type and the one with auto switch. But, as for the one with auto switch, and the heat resistant cylinder with heat resistant auto switch, since it will be differed depending on the series, please contact SMC.
- *: Piston speed is ranged from 50 to 500 mm/s. But, for \varnothing 80 and \varnothing 100, it will be 50 to 400 mm/s.
- *: No cushion is equipped. Check the kinetic energy.
- *: Use the following grease pack for the maintenance work: GR-F-010 (Grease: 10 g)

How to Order

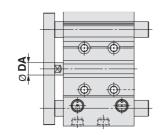

⚠Warning Precautions

Be aware that smoking cigarettes etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

Posts material shapped to steinless steel	Α	1, 2, 3, 4, 5, 6
Parts material changed to stainless steel	В	1, 2, 5, 6
Charifications other than above and external dimensions		Same as standard type

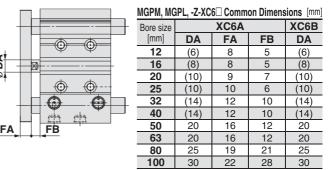

How to Order

MGP Made of stainless steel Suffix

A Stainless steel used on all standard iron parts

B Stainless steel used on rod parts etc.

Dimensions

The dimensions in () are the same as standard type.

Symbol -XC8

Adjustable Stroke Cylinder/Adjustable Extension Type

It adjusts the extending stroke by the stroke adjustable mechanism equipped in the head side. (After the stroke is adjusted, with cushion on both sides is altered to single-sided, with cushion.)

Applicable Series

Description	Model	Action
	MGPM-Z	Double acting
Standard type	MGPL-Z	Double acting
	MGPA-Z	Double acting

How to Order

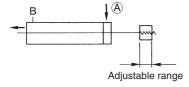

Adjustable stroke cylinder/Adjustable extension type

Precautions

⚠ Warning

- When the cylinder is operating, if something gets caught between the stopper bracket for adjusting the stroke and the cylinder body, it could cause bodily injury or damage the peripheral equipment. Therefore, take preventive measures as necessary, such as installing a protective cover.
- 2. To adjust the stroke, make sure to secure the wrench flats of the stopper bracket by a wrench etc. before loosening the lock nut. If the lock nut is loosened without securing the stopper bracket, be aware that the area that joins the load to the piston rod or the area in which the piston rod is joined with the load side and the stopper bracket side could loosen first. It may cause an accident or malfunction.

Precautions

⚠ Caution

- When air is supplied to the cylinder, if the stroke adjustment bolt is loosened in excess of the allowable stroke adjustment amount, be aware that the stroke adjustment bolt could fly out or air could be discharged, which could injure personnel or damage the peripheral equipment.
- Adjust the stroke when the cylinder is not pressurised. If it is adjusted in the pressurised state, the seal of the adjustment section could become deformed, leading to air leakage.

9 Intermediate Stroke (Spacer type)

Symbol -XC19

Dealing with the intermediate stroke by installing a spacer with the standard stroke cylinder.

Applicable Series

Description	Model	Action
With air cushion	MGPM-AZ	Double acting
	MGPL-AZ	Double acting
	MGPA-AZ	Double acting

How to Order

MGP A Standard model no. -XC19

Intermediate stroke (Spacer type)

Applicable Stroke

Description	Dealing with the stroke in 1 mm increments by changing a collar of the standard stroke cylinder. Minimum manufacturable stroke Ø 16 to Ø 63: 15 mm Ø 80, Ø 100: 20 mm Select a rubber bumper type, because the cushion effect is not obtainable for less than this stroke.		
Model no.	Add "-XC19" to the end of standard part number.		
A	Ø 16	15 to 249	
Applicable stroke [mm]	Ø 20 to Ø 63	15 to 399	
[]	Ø 80, Ø 100 20 to 399		
Example	Part no.: MGPM20-35AZ-XC19 15 mm width collar is installed in MGPM20-50AZ. C dimension is 112 mm.		

^{*:} Intermediate strokes (in 1 mm increments) with a special body are available as special products.

Ø 20 Ø 16

Maximum speed [mm/s]

load [kg

The shock absorber service life is different from that of the MGP cylinder. Refer to the Series RB Specific Product Precautions for the replacement period.

Mounting

Do not allow hands or fingers near the cylinder during its operation.

If finger, etc. were to get caught between shock absorber and body, it might damage on the human body and the peripheral equipment. Take protective measures by mounting a protective cover, etc. as necessary.

Basically, avoid bottom-mounting a cylinder.

Mounting space is limited owing to the guide rod and the end plate, etc. Mount a cylinder by the top mounting or side mounting.

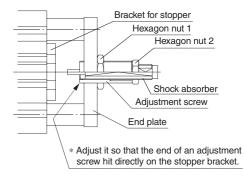

Adjustment

1. How to adjust an adjustment screw (Stroke adjustment)

Loosen only the hexagon nut 1, then turn the adjustment screw to adjust the stroke. After adjusting, lock it with the hexagon nut 1. Fix it at the position ejected from the end plate, so that the end face of an adjustment screw could hit the bracket for stopper directly. (Refer to the figure right above.)

2. How to replace shock absorbers

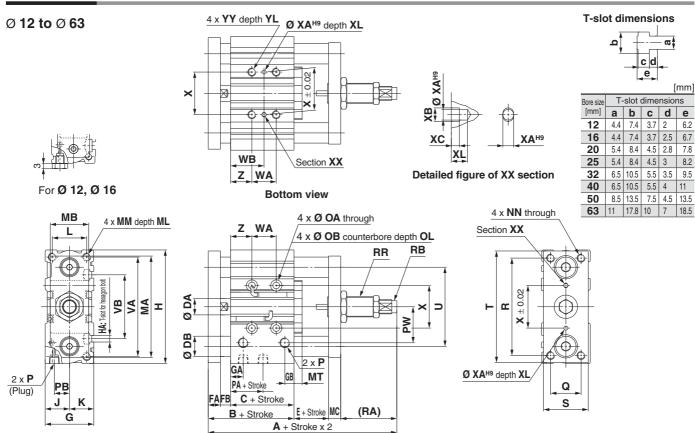

Loosen hexagon nut 2, and turn a shock absorber counterclockwise for removal. For installing a new shock absorber, fix it at the position that the end face of an adjustment screw sticks out by 0.5 mm from a shock absorber. (Refer to the figure on the right.) After adjusting the position of shock absorber, be sure to secure with hexagon nut 2.

	MGPM-AZ	Double acting
With air cushion	MGPL-AZ	Double acting
	MGPA-AZ	Double acting
Heavy duty guide rod type	MGPS	Double acting

Specifications

Ambient temperature range	0 °C to 60 °C
Seals material	Nitrile rubber
Grease	Grease for food
Auto switch	Mountable
Dimensions	Same as standard type
Specifications other than above	Same as standard type

How to Order

⚠ Warning **Precautions**

Be aware that smoking cigarettes etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

Not installable zone

Food zone An environment where food which will be sold as merchandize, directly touches the cylinder's

components.

Splash zone ······ An environment where food which will not be sold as merchandize, directly touches the cylinder's components.

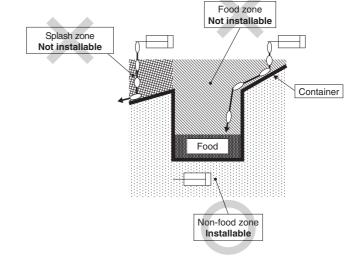

Installable zone

Non-food zone An environment where there is no contact with food.

- *: Avoid using this product in the food zone. (Refer to the figure on the right.)
- *: When the product is used in an area of liquid splash, or a water resistant function is required for the product, please consult with SMC.
- *: Operate without lubrication from a pneumatic system lubricator.
- *: Use the following grease pack for the maintenance work.

GR-H-010 (Grease: 10 g)

*: Please contact SMC for details about the maintenance intervals for this cylinder, which differ from those of the standard cylinder.

-XC88

15 Spatter Resistant Coil Scraper, Lube-retainer, Grease for Welding (Rod parts: Stainless steel 304)

Reduces spatter adhesion and improves durability by the use of the coil scraper, Lube-retainer and grease for welding.

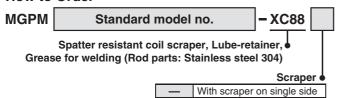

Applicable Series

Description	Model	Action
Standard type	MGPM-Z	Double acting

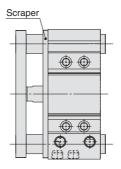

Specifications

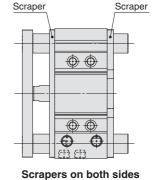

Bore size		Ø 32 to Ø 100
Piston rod,	Guide rod	Stainless steel 304 (With hard chrome plated)
Scraper		With coil scraper, With Lube-retainer
Minimum	On single side	0.12 MPa
operating pressure	On both sides	0.14 MPa
Grease		Grease for welding
Other spec	ifications	Same as standard type

How to Order

Series MGP Specific Product Precautions 1

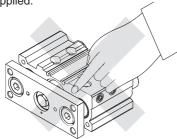

Be sure to read this before handling. Refer to the back cover for Safety Instructions. For Actuator and Auto Switch Precautions, refer to Handling Precautions for SMC Products and the Operation Manual on the SMC website, http://www.smc.eu

Mounting

⚠ Warning

1. Never place your hands or fingers between the plate and the body.

Be very careful to prevent your hands or fingers from getting caught in the gap between the cylinder body and the plate when air is applied.

∧ Caution

1. Use cylinders within the piston speed range.

An orifice is set for this cylinder, but the piston speed may exceed the operating range if the speed controller is not used. If the cylinder is used outside the operating speed range, it may cause damage to the cylinder and shorten the service life. Adjust the speed by installing the speed controller and use the cylinder within the limited range.

2. Pay attention to the operating speed when the product is mounted vertically.

When using the product in the vertical direction, if the load factor is large, the operating speed can be faster than the control speed of the speed controller (i.e. quick extension). In such cases, it is recommended to use a dual speed controller.

3. Do not scratch or gouge the sliding portion of the piston rod and the guide rod.

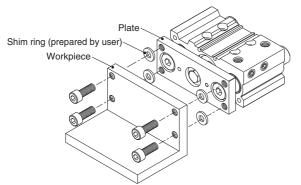

Damaged seals etc. will result in leakage or malfunction.

4. Do not dent or scratch the mounting surface of the body and the plate.

The flatness of the mounting surface may not be maintained, which would cause an increase in sliding resistance.

5. Make sure that the cylinder mounting surface has a flatness of 0.05 mm or less.

If the flatness of the workpieces and brackets mounted on the plate is not appropriate, sliding resistance may increase. If it is difficult to maintain a flatness of 0.05 or less, put a thin shim ring (prepared by user) between the plate and workpiece mounting surface to prevent the sliding resistance from increasing.

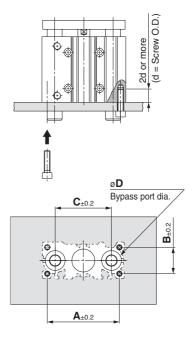

Mounting

⚠ Caution

6. Bottom of cylinder

The guide rods protrude from the bottom of the cylinder at the end of the retracting stroke, and therefore, in cases where the cylinder is to be bottom mounted, it is necessary to provide bypass ports in the mounting surface for the guide rods, as well as holes for the hexagon socket head cap screws which are used for mounting.

Moreover, in applications where impact occurs from a stopper etc., the mounting screws should be inserted to a depth of 2d or more.

Bore size	Α	В	С	D [r	mm]	Hexagon socket
[mm]	[mm]	[mm]	[mm]	MGPM	MGPL/A	head cap screw
12*	50	18	41	10	8	M4 x 0.7
16	56	22	46	12	10	M5 x 0.8
20	72	24	54	14	12	M5 x 0.8
25	82	30	64	18	15	M6 x 1.0
32	98	34	78	22	18	M8 x 1.25
40	106	40	86	22	18	M8 x 1.25
50	130	46	110	27	22	M10 x 1.5
63	142	58	124	27	22	M10 x 1.5
80	180	54	156	33	28	M12 x 1.75
100	210	62	188	39	33	M14 x 2.0

^{*:} Air cushions are not available for bore size 12.

Series MGP Specific Product Precautions 2

Be sure to read this before handling. Refer to the back cover for Safety Instructions. For Actuator and Auto Switch Precautions, refer to Handling Precautions for SMC Products and the Operation Manual on the SMC website, http://www.smc.eu

Piping

∧ Caution

Depending on the operating conditions, piping port positions can be changed by using a plug.

1. M5

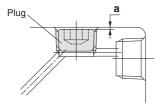

After tightening by hand, tighten additional 1/6 to 1/4 rotation with a tightening tool.

2. Tapered thread for Rc port (MGP) and NPT port (MGP□□TN)

Use the correct tightening torques listed below. Before tightening the plug, wrap pipe tape around it. Also, with regard to the sunk dimension of a plug (dimension "a" in the drawing), use the stipulated figures as a guide and confirm the air leakage before operation.

* If tightening plugs on the top mounting port with more than the proper tightening torque, plugs will be screwed much deeply and air passage will be squeezed. Consequently, the cylinder speed will be restricted.

Connection thread (plug) size	Proper tightening torque [N·m]	a dimension
1/8	7 to 9	0.5 mm or less
1/4	12 to 14	1 mm or less
3/8	22 to 24	1 mm or less

3. Parallel pipe thread for G port (MGP□□TF)

Screw in the plug to the surface of the body (dimension "a" in the drawing) by checking visually instead of using the tightening torque shown in the table.

Cushion

With air cushion

⚠ Warning

1. Do not open the cushion valve excessively.

Air leakage will occur if operated after opening by 4 rotations or more. Furthermore, a stopper mechanism is provided for the cushion valve, and it should not be forced open beyond that position. Be aware that the cushion valve may jump up from the cover when the air is supplied.

↑ Caution

1. Be sure to use the cylinder after the air cushion has been adjusted appropriately.

First, fully close the cushion valve. Start the operation at the cylinder speed to be used with the load applied, and then open the cushion valve gradually to make the adjustment. The optimal adjustment is that the piston reaches its stroke end and the collision sound is minimised. If the cushion valve is used without adjusting the air cushion appropriately, this may cause damage to the retaining ring or piston.

Bore size [mm]	Applicable tool	
16, 20, 25, 32, 40	JIS B4648 hexagon wrench key 1.5	
50, 63, 80, 100	JIS B4648 hexagon wrench key 3	

2. Be sure to operate a cylinder equipped with air cushion to the end of the stroke.

If it is not operated to the end of the stroke, the effect of the air cushion will not be fully exhibited. Consequently, in cases where the stroke is regulated by an external stopper etc., caution must be exercised, as the air cushion may become completely ineffective.

Series MGP Specific Product Precautions 3

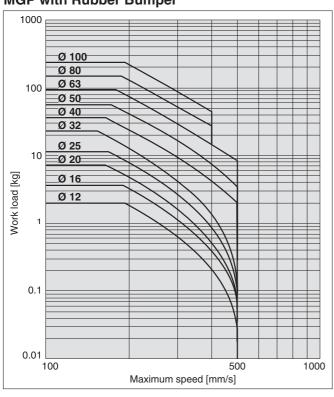

Be sure to read this before handling. Refer to the back cover for Safety Instructions. For Actuator and Auto Switch Precautions, refer to Handling Precautions for SMC Products and the Operation Manual on the SMC website, http://www.smc.eu

Allowable Kinetic Energy

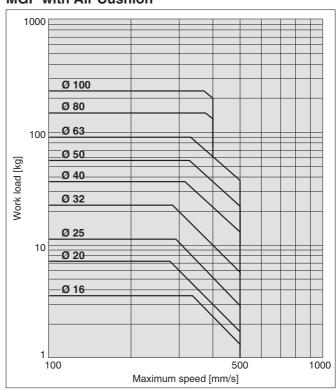

⚠ Caution

Work load and a maximum speed must be within the ranges shown in the graph below.

MGP with Rubber Bumper

MGP with Air Cushion

MGP without Cushion (MGP-UV (Water resistant), XB6, XC9, XC22)
