

Assembly block

SK

diebold

Application:

For mounting and removing tool combinations arranged vertically and horizontally.

Execution:

- Rigorous work on the back of the tool possible (pull stud, fitted screw).
- All that is necessary to change-over to different steep taper sizes is to replace the interchangeable inserts.
- All taper variations DIN 69871, DIN 2080, MAS-BT of the same size can be clamped in the tool assembly block without changing the inserts.

Delivery:

1x assembly block.
