Typical electrical schematic

RB common-mode chokes are mainly used to filter EMI noise on AC power lines up to 600VAC but they are as well applicable in DC power lines of photovoltaic installations or similar applications up to 1000VDC.

EMI noise of electronic equipment can go to the power lines and disturb the proper function of other devices like TV sets or radios.

Thus noise generated by the equipment from switched power electronics or by high slew rates of controllers needs to be filtered.

RB common-mode chokes are used to suppress EMI noise in PCB integrated filter designs with line bypass capacitors or in combination with single phase filters for extra low leakage filter designs.

Features and benefits

- | Cost-effective PCB designs for up to 80A with forced cooling*
- | Compact size and light weight
- | Low magnetic leakage flux
- | Excellent winding insulation
- | Standardized foot print
- | Broad range of inductance ratings
- | Custom-specific versions on request

* See Application Note for forced cooling

Typical applications

- | AC and DC filtering for midsize power range drives, photovoltaic inverters, fast chargers, charging stations, UPS and switch mode power supplies
- | Filter with low leakage current noise or improved immunity against grid disturbances
- | Electronic devices, automation
- | Converters
