K8031

VELLEMAN COMPONENTS NV Legen Heirweg 33 9890 Gavere Belgium http://www.velleman.be

1. Assembly (Skipping this can lead to troubles !)

Ok, so we have your attention. These hints will help you to make this project successful. Read them carefully.

1.1 Make sure you have the right tools:

• A good quality soldering iron (25-40W) with a small tip.

- Wipe it often on a wet sponge or cloth, to keep it clean; then apply solder to the tip, to give it a wet look. This is called 'thinning' and will protect the tip, and enables you to make good connections. When solder rolls off the tip, it needs cleaning.
- Thin raisin-core solder. Do not use any flux or grease.
- A diagonal cutter to trim excess wires. To avoid injury when cutting excess leads, hold the lead so they cannot fly towards the eyes.
- Needle nose pliers, for bending leads, or to hold components in place.
- Small blade and phillips screwdrivers. A basic range is fine.

- For some projects, a basic multi-meter is required, or might be handy

1.2 Assembly Hints :

- \Rightarrow Make sure the skill level matches your experience, to avoid disappointments.
- ⇒ Follow the instructions carefully. Read and understand the entire step before you perform each operation.
- \Rightarrow Perform the assembly in the correct order as stated in this manual
- ⇒ Position all parts on the PCB (Printed Circuit Board) as shown on the drawings.
- \Rightarrow Values on the circuit diagram are subject to changes.
- ⇒ Values in this assembly guide are correct*

0.000

 \sim

- \Rightarrow Use the check-boxes to mark your progress.
- \Rightarrow Please read the included information on safety and customer service

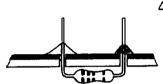

* Typographical inaccuracies excluded. Always look for possible last minute manual updates, indicated as 'NOTE' on a separate leaflet.

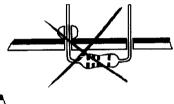

1.3 Soldering Hints :

1- Mount the component against the PCB surface and carefully solder the leads

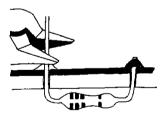

2- Make sure the solder joints are coneshaped and shiny

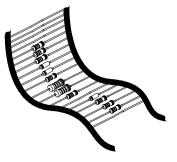

3- Trim excess leads as close as possible to the solder joint

AXIAL COMPONENTS ARE TAPED IN THE CORRECT MOUNTING SEQUENCE !

REMOVE THEM FROM THE TAPE ONE AT A TIME !

21. Voltage regulator and PCB assembly LC23: 7805 (UA7805P) This regulator must be isolated plastic type ! Mount the voltage regulator on the rear panel and fasten it with the supplied M3 bolt, washer and nut as shown on the drawing. Make sure to remove the protective foil from the front and rear panel ! E REGULATO Fig. 1 Assemble the enclosure as following: Position the PCB together with the front and rear panel in the bottom half of the enclosure. Fasten the PCB in the enclosure. Fig. 2 Now the voltage regulator can be soldered at the **component** side of the PCB, not at the solder side. Mount a LED clip into the test signal hole (1). (F See next page for screen foil fixation and position

to the PCB.

23. Test and adjustment

- Install the PC-Lab2000 software (see getting started manual).
- Connect the unit using a parallel cable to the computer LPT port.
- Connect a 9V/500mA power supply to the unit. (check the polarity). The LED on the front panel should lid.
- Start the PC-Lab2000 software and select K8031 hardware and the appropriate port.
- Short circuit the input using an appropriate probe or connection.
- Press the RUN button.

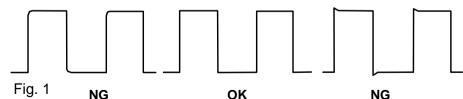

^{CP} For all adjustment select DC input and Trigger off.

Offset adjustment:

- Make sure that the Y position slider is in the centre position.
- Switch always between 1V/div and 3V/div setting.
- Adjust RV1 until the signal remains stable on the screen.

Transient adjustment and calibration:

- Select 1V/div.
- Connect the input to test point J4.
- Adjust CV1 until the signal top is as flat as possible.

- In the VIEW menu select "RMS value".
- Adjust RV2 until the signal is 2.5Vrms.
- Select 0.3V/div.
- Connect the input to test point J3.
- Using the Y position slider set the signal in the centre of the screen.
- Adjust CV2 until the signal top is as flat as possible.

Repeat the transient adjustment and calibration at least once.

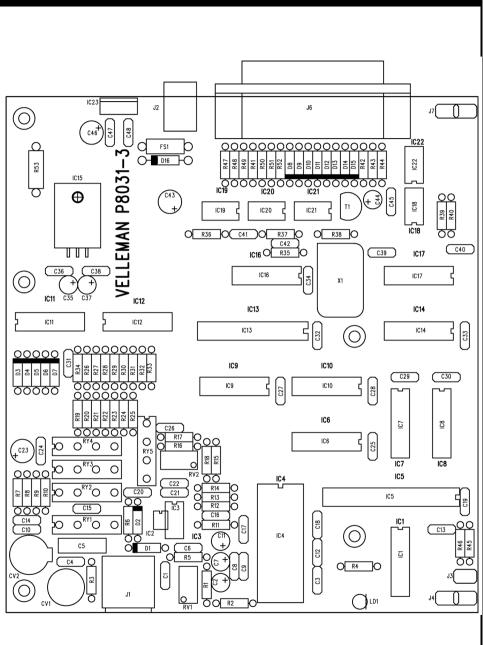

Finally use the calibrate and exit option in the File menu to complete the calibration.

Mount the cover onto the enclosure (fold the screen foil).

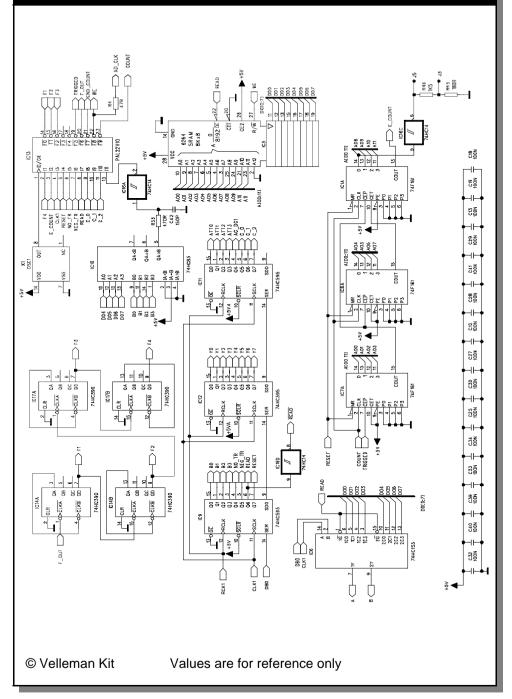

The unit is now ready for use. Check the CD for more information.
