CE **VISC**� US

## **Model Number**

## RLG28-55/115b/136

Retroreflective area sensor with 300 mm fixed cable and 4-pin, M12 x 1 connector

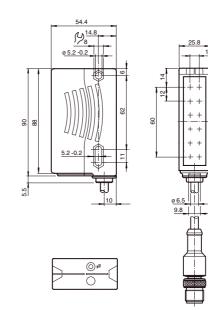

#### **Features**

- ٠ Retro-reflective area sensor with 6 light beams in standard photoelectricsensor enclosure
- Connection compatibly replaces single beam photoelectric sensor
- Reliable detection of the front edge of the object irrespective of its shape and position
- Constant object detection from ٠ 12 mm within the entire detection area
- Reliable detection of all surfaces irres-. pective of the object texture
- Switches when contrast difference • 10%
- Bright, highly visible transmitter beams, guarantee convenient alignment of the sensor

## **Product information**

The RLG28 retro-reflective area sensor contains several transmitters and receivers in one housing and with a reflector positioned opposite forms a 60 mm detection area over a sensing range of 4 m.

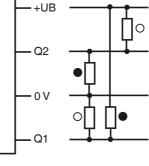

When the light beams are interrupted by an object, the switching function is triggered. The smallest detectable object size is 12 mm. The RLG28 switches at a 10% contrast difference with a response time of 1 ms. An intelligent gain control compensates for effects such as dirt, misalignment, and temperature.

## **Electrical connection**

## Mounting:

Ensure that the red light transmitted by the sensor fully illuminates the reflector. To ensure optimal detection, the entire 60 mm detection field must appear on the reflector.

Singapore: +65 6779 9091 fa-info@sg.pepperl-fuchs.com

Release date: 2015-02-18 11:23 Date of issue: 2015-02-18 217870\_eng.xml

To check this illumination, look at the reflector from over the top of the sensor housing.

**Object detection after successful Teach-in** 

The target should be large enough so that the reflector is always completely covered in one dimension! optimal

object = resolution

Press the Teach-in

on the second	

not optimal

object > resolution

#### Signal tracking:

- Active:
- At variable temperature
- Objects located in the light path that lie below the switching point. These objects result in a readjustment of the emitter. This allows these objects to be taught in or taught out.
- Inactive:
- · Function not available

To alter the signal tracking, press the Teach-in button for >10 seconds. The current status is displayed. Briefly pressing the Teach-in button changes the mode.

button > 10 seconds Signal tracking switch mode Press the Teach-in Yellow LED 1 Hz button Mode is changed Flashes once Tracking on Flashes twice Tracking off Reverts back to normal mode after 5 seconds if no changes are made Refer to "General Notes Relating to Pepperl+Fuchs Product Information"
