PIC18F06/16Q40 Silicon Errata and Data Sheet Clarifications

The PIC18F06/16Q40 devices you have received conform functionally to the current device data sheet (DS40002216**C**), except for the anomalies described in this document.

The silicon issues discussed in the following pages are for silicon revisions with the Device and Revision IDs listed in the table below.

The errata described in this document will be addressed in future revisions of the PIC18F06/16Q40 silicon.

Note: This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current.

Table 1. Silicon Device Identification

Part Number	Device ID	Revision ID	
		A4	A5
PIC18F06Q40	0x75C0	0xA004	0xA005
PIC18F16Q40	0x75A0	0xA004	0xA005

> **Important:** Refer to the **Device/Revision ID** section in the current **"PIC18-Q40 Family Programming Specification"** (DS40002185) for more detailed information on Device Identification and Revision IDs for your specific device.

Table 2. Silicon Issue Summary

Table of Contents

1. Silicon Errata Issues

☞ **Notice:** This document summarizes all silicon errata issues from all revisions of silicon, previous as well as current. Only the issues indicated by the bold font in the following tables apply to the current silicon revision.

1.1 Module: Analog-to-Digital Converter with Computation (ADCC)

1.1.1 ADC Cannot Operate in Certain Low-Power Conditions

The ADC will not function when all of the following conditions exist: When the MCU system clock is sourced from LFINTOSC or SOSC and when both the BOR and FVR features are disabled.

Work around

- Method 1: Use a system clock other than LFINTOSC or SOSC.
- Method 2: Enable the BOR feature.
- Method 3: Enable the FVR feature.

Affected Silicon Revisions

A4	A5
X	

1.2 Module: Oscillator

1.2.1 Maximum Clock Frequency Limited to 2 MHz for XT Mode

The maximum clock frequency for the intermediate gain setting that supports quartz crystal and ceramic resonator operation (XT mode) is being reduced from 4 MHz to 2 MHz.

Work around

For crystal or resonator frequencies above 2 MHz, use HS mode.

Affected Silicon Revisions

A4	A5
X	

1.2.2 Enabling the FOSC Fail-Safe Clock Monitor Alongside the Primary or Secondary Oscillator Clock Monitor Causes Issues with Sleep

When the FOSC Fail-Safe Clock Monitor is enabled (FCMEN Configuration bit = 1) and either the Primary or Secondary Fail-Safe Clock Monitor is also enabled (FCMENS and/or FCMENP = 1), putting the device to Sleep will cause a Fail-Safe condition to trigger. This has the effect of erroneously triggering Fail-Safe interrupts when there has not been a clock interruption. This can also cause the Watchdog Timer to not properly wake up the part from Sleep.

Work around

If proper functionality in Sleep is required, do not enable the Primary or Secondary Fail-Safe Clock Monitor while the FOSC Fail-Safe Clock Monitor is enabled. If Primary or Secondary Clock Monitoring in Sleep is desired, disable the FOSC Fail-Safe Clock Monitor before the device goes to Sleep.

Affected Silicon Revisions

A4	A5
X	

1.2.3 Maximum Clock Frequency for EC Mode Is 32 MHz for V_{DD} < 2.0V

When configured in External Clock High-Power (ECH) mode and operating at V_{DD} < 2.0V, the maximum input clock frequency is 32 MHz.

Work around

To obtain a system clock frequency of 64 MHz in ECH mode at V_{DD} < 2.0V, use a 16 MHz external clock in conjunction with the 4x Phase-Locked Loop (PLL) circuit (i.e., either RSTOSC Configuration bits = 0b010 or OSCCON1bits.NOSC = 0b010).

Affected Silicon Revisions

A4	A5
X	

1.3 Module: I²C

1.3.1 I2CxADR0/1/2/3 Registers Have Incorrect Reset Value

The I2CxADR0/2 registers reset to 0xFF when the I2CxMD is enabled instead of 0x00. The I2CxADR1/3 registers reset to 0xFE when the I2CxMD is enabled instead of 0x00.

Work around

None.

Affected Silicon Revisions

A4	A5
X	

1.4 Module: PFM - Program Flash Memory

1.4.1 Endurance of PFM Cell Is Lower than Specified

The Flash memory cell endurance specification (Parameter MEM30) is lower than specified in the device data sheet. The PFM cell endurance is 1K cycles instead of 10K cycles.

Work around

None.

Microchip Devices Code Protection Feature

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods being used in attempts to breach the code protection features of the Microchip devices. We believe that these methods require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Attempts to breach these code protection features, most likely, cannot be accomplished without violating Microchip's intellectual property rights.
- Microchip is willing to work with any customer who is concerned about the integrity of its code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is "unbreakable." Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
