

Change Notification for Polymer Surface Mount to Black Epoxy Resin

AVX will be transitioning from Gold to Black epoxy resin for all Polymer surface mount capacitors in order to standardize the production process and materials. Eventually all Polymer series will be changed prior to July 2020. Affected series include:

TCQ, TCB, TCS, TCJ, TCN, TCN (J-Cap), TCM

An “E” suffix will be added to individual PN’s to reflect the resin color change and all catalog series data sheets will be updated with the new PN’s:

Example: TCQD337M006R0025 → TCQD337M006R0025E

Samples may be submitted in either the current Gold resin or the new Black resin depending upon availability and urgency of the request. Qualification data and new Black samples can be supplied at a later date if not available at the time of request. Please contact product marketing for further details:
