 The *Previously approved version* (</resources/eval/user-guides/eval-adicup360/hardware/adxl362?rev=1516720721>) (23 Jan 2018 16:18) is available.

EVAL-ADXL362-ARDZ Shield

The [EVAL-ADXL362-ARDZ](https://www.analog.com/EVAL-ADXL362-ARDZ) [https://www.analog.com/EVAL-ADXL362-ARDZ] shield illustrates the functionality of the ADXL362 - an ultralow power, 3-axis MEMS accelerometer.

The [ADXL362](https://www.analog.com/ADXL362) [https://www.analog.com/ADXL362] is capable of measuring dynamic acceleration (resulting from motion or shock) as well as static acceleration (gravity). It provides 12-bit output resolution and has three operating ranges, ± 2 g (gravity), ± 4 g (gravity), and ± 8 g (gravity). Additional useful features include an on-chip, 12-bit temperature sensor accurate to $\pm 0.5^\circ$, motion triggered wake-up functionality, and several activity detection modes which makes it ideal for portable low-power instruments.

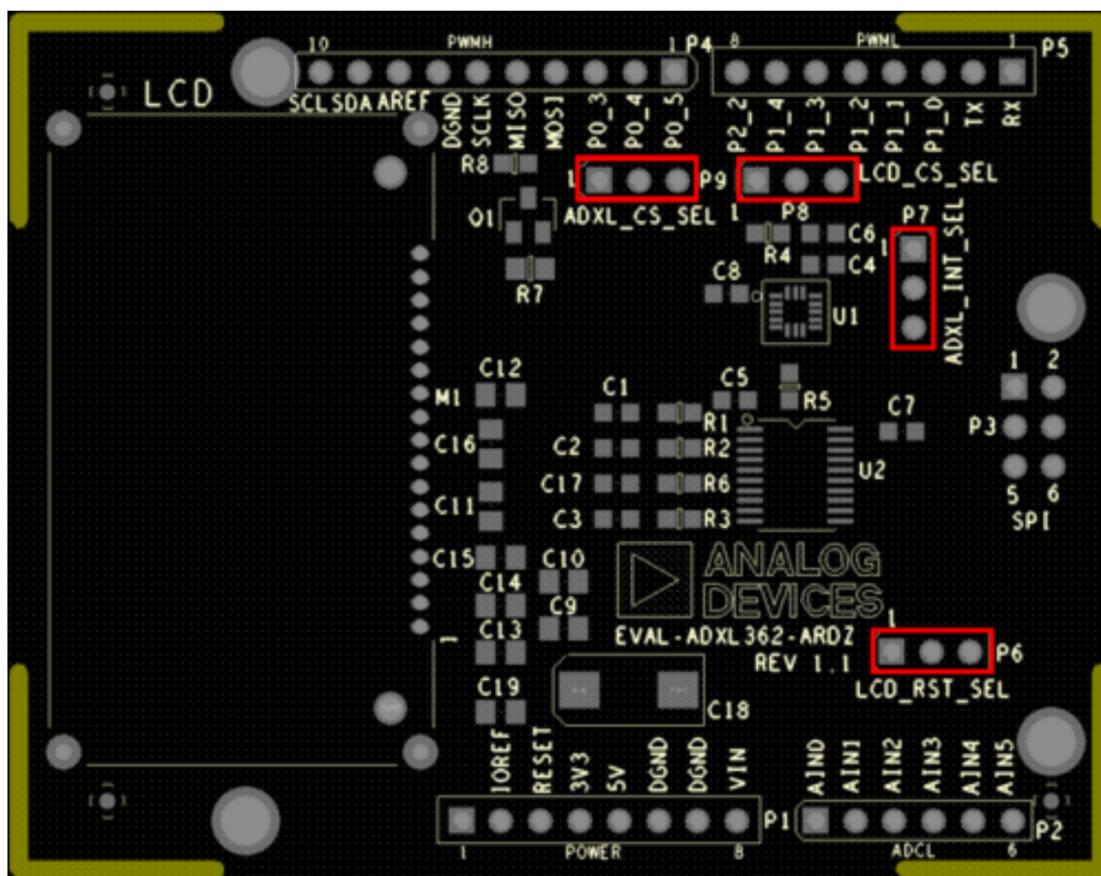

The [EVAL-ADXL362-ARDZ](https://www.analog.com/EVAL-ADXL362-ARDZ) [https://www.analog.com/EVAL-ADXL362-ARDZ] Shield is designed in Arduino Uno R3 format which makes it suitable to use with both Arduino Due (e.g. (for example) [EVAL-ADICUP360](https://www.analog.com/EVAL-ADICUP360) [https://www.analog.com/EVAL-ADICUP360] based board) and Arduino Uno R3 base boards.

The [EVAL-ADXL362-ARDZ](https://www.analog.com/EVAL-ADXL362-ARDZ) [https://www.analog.com/EVAL-ADXL362-ARDZ] board has a large capacitor (C18) on the board which holds charge for the LCD screen. When power cycling the system, you must wait approximately 5 seconds to allow enough time for the capacitors on the [EVAL-ADXL362-ARDZ](https://www.analog.com/EVAL-ADXL362-ARDZ) [https://www.analog.com/EVAL-ADXL362-ARDZ] board to fully discharge. This is a power requirement for the [ADXL362](https://www.analog.com/ADXL362) [https://www.analog.com/ADXL362], which notes in the datasheet that the power rail must come all the way back down to 0V before powering back up.

Connectors and Jumper configuration

The EVAL-ADXL362-ARDZ [<https://www.analog.com/EVAL-ADXL362-ARDZ>] Shield has four jumpers to increase flexibility when stacking systems together. Each jumper and its purpose is described below.
