AREA OF APPLICATION

The watchmaker screwdriver set is not only for the watchmaker one of the most important tools, but also in the electrical sector, for the model maker, or in the Do-it-yourself and hobbyist needs. The fine screwdriver with smooth-running rotating cap facilitates precise repeated screwing, turning, tightening or loosening due to its special ease of movement

TECHNICAL DESCRIPTION

INSTRUCTIONS: High humidity or touching the blades with your fingers (sweat) causes flash rust. Therefore, the blades should always be kept dry or rubbed with a drop of oil for storage. If such rust forms on the blade, it can be easily removed, with a slight ground.
