

3M™ Particulate Filter 5925, P2

The 3M™ Gas/Vapour Filters 6000 Series have bayonet type fittings to attach them to the 3M range of half and full face pieces. Often there is also a need to be protected simultaneously against gas/vapours and particulates in the workplace air. The 5925 particulate filter is used to do this in conjunction with the 3M™ Filter Retainer 501 to provide dual protection.

Features

- **Lightweight**
- **Low breathing resistance**
- **Excellent field of vision** fitted over the 6000 Gas/vapour filter range
- **Versatility:** can be used on all 3M™ Half Masks & Full Face Masks 6000, 7000 & 7500 Series in combination with 6000 series filters and 501 retainer.

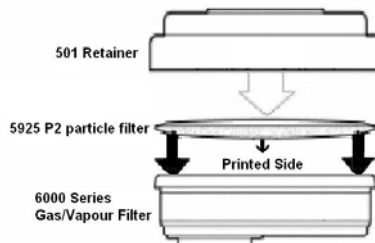

Application

The 3M particulate filter 5925, P2 can be used in industries where excess levels of particulates are present in the workplace atmosphere where gas/vapour protection is also required.

When there is a need for combination gas/vapour and particulate protection (e.g. paint spraying), fitting of the 5925 particulate filter and the 501 retainer over the required 60xx gas/vapour filter will give a combination gas/vapour & particulate filter. These combination style filters will be capable of providing protection against dusts, mists and fumes as well as specific gas/vapours.

Specifications

The 5925 filter meets the performance requirements of AS/NZS1716. It is a P2 rated particle filter for use against mechanically & thermally generated particulates at levels up to 10 times the Exposure Standard on a half face mask and 50 times on a full facemask.

NOTE: The 5925 filter should be installed with the printed side down i.e. facing the gas filter and the clear side facing out. This allows details to be read even after use. It also provides improved service life as the non printed side has a top layer designed to reduce clogging.
