## 5. Soldering Conditions:

Recommended Soldering Profile for the JJJ Series

■ The temperatures defined above are the temperatures measured on the surface of the Printed Circuit Board. There are cases where the printed circuit board's temperature differs greatly from the temperature of the switch. Critical note: the switch's surface temperature must not exceed $260^{\circ} \mathrm{C}$.

## ■ Manual Soldering

Soldering Temperature: $350^{\circ} \mathrm{C}$ Max.
Continuous Soldering Time: 5 second Max.

## - Precautions in Handling

1. Care must be taken to ensure excess flux on the top surface of the printed circuit board does not adhere to the switch.
2. Do not wash the switch.

For Email, phone or live chat, go to: www.te.com/help

■ Recommended storage conditions:
Store the products in the original packaging material. After opening the package, the remaining products must be stored in the appropriate moisture-proof \& airtight environment.

Do not store the switch in the following environment or it may affect performance and solderability:

1. temperatures below $-10^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}$ \& humidity at $85 \%$ (min)
2. environment with corrosive gas
3. storage over 6 months
4. place in direct sunlight
