Worm Gear Units ZM/I

General data: Universal heavy-duty gearboxes.
4 sizes, centre distance 40, 50, 63 and 80 mm.
Centre distance 100 - 315 mm available on request.

Housing: High-quality grey cast iron, all sides machined and with mounting holes on 5 sides.

Gearing: 13 ratios from 5 to 83 : 1; worm shaft hardened and ground. Worm gear made from special centrifugally cast bronze.

Efficiency factor: The efficiency factors stated in the selection tables are guideline values for properly run-in and lubricated gearboxes at operating temperature with nominal load and driving worm shaft. Proper running in is a crucial factor influencing the lifetime of the gearbox. The starting efficiency factor (η_A) is, as the operating efficiency factor (h), depending on the lead angle.

Self-locking: Self-locking only occurs in worm gear units, when the unit cannot be driven from the output side. Worms with 4 and 6 threads sometimes permit transmission ratios for gearing up (i = 5 : 1 to 13.3 : 1). If a gearbox must be implicitly self-locking, or must implicitly not be self-locking, we urge you to contact us.
The ratios 40:1 and 72:1 optimized for manual operation are static and dynamic self-locking.

Bearing system: All gearbox shafts with generously dimensioned roller bearings.

Lubrication: The gearboxes are lubricated for life using synthetic oil. Under normal operating conditions, no maintenance is required. The housing should be checked for leakages at an interval of approx. 2 years.

Ventilation: Size (centre distance) 40 is supplied without ventilation. With the other gearboxes, the sealing plug has to be exchanged with the separately packed venting filter.

Version A

Version HL

Venting Filter (VF)

Size	A mm	B mm	C mm	D mm	E mm	F mm
40*	-	-	-	-	-	-
50	50	20	33	22	58	25
63	62,5	27,5	37	22	67	25
80	77,5	32,5	57	22	82	25

* Size 40 without Ventilation.

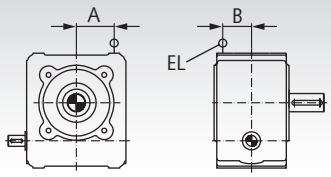
Lubrication Volume in Litre (dm^3)

Size	Mounting Position 1	2	3 + 4	5 + 6
40	0,20	0,25	0,20	0,20
50	0,30	0,60	0,45	0,45
63	0,50	1,10	0,70	0,80
80	0,90	2,10	1,40	1,60

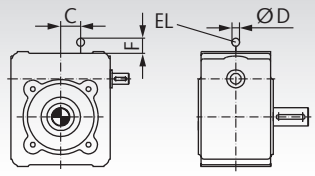
The standard lubrication volume is calculated for mounting position 2. For other mounting positions and high permanent speeds it might have to be reduced, to avoid oil leakages.

Position of the Oil Fittings Size 50 - 80

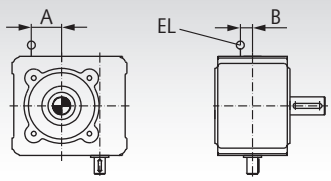
Mounting Position 1



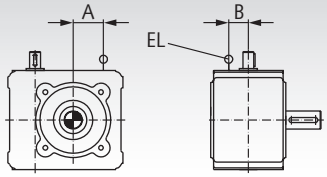
Mounting Position 2



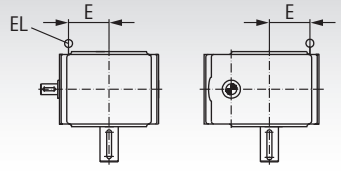
Mounting Position 3



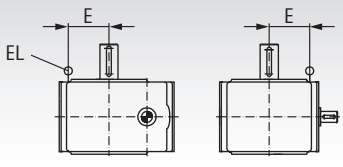
Mounting Position 4



Mounting Position 5



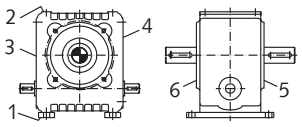
Mounting Position 6



Mounting Sides

The worm gear units can be mounted in any position and the shaft ends can be positioned to your requirements.

Sizes 40 - 80



Worm Gear Units ZM/I, Technical Data, Size 80

The input power $P_{1permiss.}$ and output torques $T_{2permiss.}$ listed in the selection tables are based on shock-free continuous operation, an operating time of 8 hours/day, 3 starts per hour, operating time (OT) = 100% and 20°C ambient temperature. The maximum output torques T_{2max} may frequently be reached in short-term load peaks but they must not be exceeded. With an operating time under 90%, the permissible gearbox output can usually be increased.

i_n, i_{ist} = nominal ratio, real ratio.
n_1, n_2 [min^{-1}] = input speed, output speed.
$P_{1\ perm}$ [kW] = permittable input power.
$T_{2\ perm}$ [Nm] = permittable output torque (permanent).
T_{2max} [Nm] = maximum output torque (peak).
η = operating efficiency.

Dimensions Table Page 907.

Version with foot mounting brackets or shafts on both sides on request.

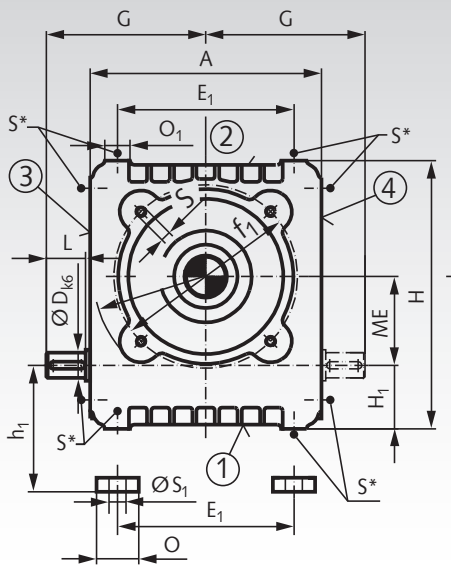
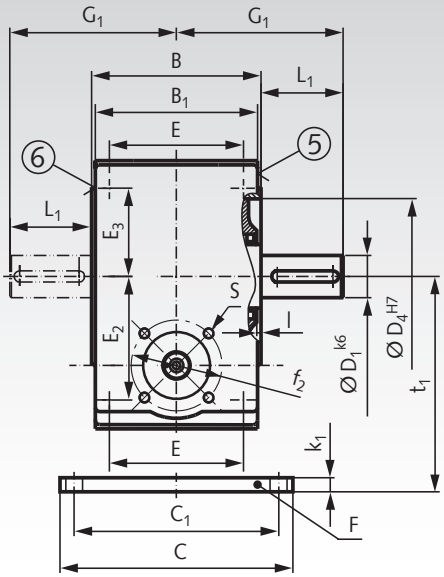
* Example: Worm gear number of teeth 29 / worm shaft 6 threads.

[1)] This implicity self-locking version is optimezed for hand operation.

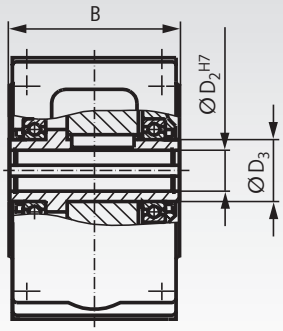
Dimensions Table Worm Gear Units ZM/I

Version A





Version HL



The sides 1 to 6 are machined and can be used as mounting surfaces. The foot mounting brackets F can be connected to the sides 1 and 2. The sides 1, 2, 3, 5 and 6 are ex-works always supplied with threaded bores. If side 4 is to be used as mounting surface, the respective surface is supplied with threaded bores. The worm shaft end can be fitted on side 3 or 4 as desired. Shaft end with thread alignment according to DIN 332 sheet 2 see page 1055, feather keys and grooves according to DIN 6885/1. Position of the venting filter according to the table on page 902. The gearbox can function in any mounting position.

Version with foot mounting bracket or double-sided output shaft on request.

Permissible Radial Loads F_R [N] for Normal Output Shaft and Bearing System

The permiss. radial loads indicated in the table are calculated for the centre of the output shaft end, also calculating in the output speed and the nominal output torque. The values were calculated for the adverse rotational direction. The permiss. radial loads only apply to unilateral load. If in your application high radial loads occur in combination with axial loads, we ask you to contact us.
