Dear Customer,

Re: Product Change Notification for Harwin packaging.

Please be advised that the pick and place cap used on male Datamate connectors (M80 Series) has been changed from a metal stamped cap to a plastic cap. This has been identified and implemented as part of our continuous improvement program at Harwin. The visual difference is as follows:

Left = New plastic cap, Right = Previous metal cap

As you can see from the profile of the plastic cap, a small amount of additional height has been introduced, and changes to the settings on your pick and place machines may be required. Please also note, we use a selection of materials for the plastic cap which will result in either natural or black plastic, depending on availability.

This change affects the following ranges:

- M80-5S1xxxxMEP
- M80-501xxxxP
- M80-502xxxxP
- M80-512xxxxP
- M80-513xxxxP
- M80-522xxxxP
- M80-826xxxxP
- M80-828xxxxP

The connector design itself is unchanged. Please note that we are no longer able to supply the metal cap once stock of the existing packaging is exhausted.

If you have any further questions regarding this letter, please do not hesitate to contact us.

Yours faithfully,

The Product Change Team
