

automation vices
centre clamping device

ATORN®

Application

ideal for 5-sided machining, as an economical solution in conjunction with palletising and automation systems. suitable for palletising and automation systems.

Version

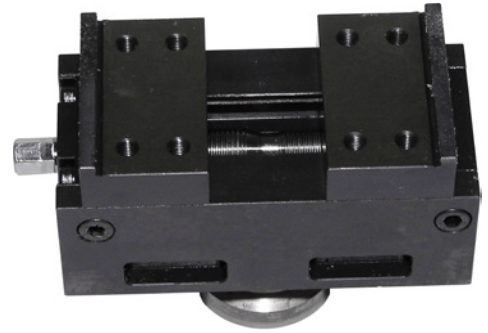

- blank without hole patterns or pallets
- compatible with all common zero-point and quick-change systems/pallets (special bores upon request).
- patented pressure rinsing function for automated, zero-manpower cleaning of spindle chamber.
- spindle and spindle nut protected against damage from chips thanks to scraper.
- extremely easy handling, multi-functional jaw range.
- optimum accessibility thanks to compact design.

Advantage

- superb price/performance ratio
- For daily use and standard precision requirements.
- Rigid frame structures, sliding tracks and plain jaws, thermochemically surface hardened and polished.
- repeat accuracy 0.01 mm.
- 30kN clamping force according to DIN6386

Delivery

centre clamping devices with base jaws and handwheel, without interchangeable jaw grips
