## 5. Soldering Conditions:

Recommended Soldering Profile for the JJE Series

The condition mentioned above is the temperature on the Cu foil of the PCB surface. There are cases where board's temperature greatly differs from switch's surface be used not to allow switch's surface temperature to exceed $260^{\circ} \mathrm{C}$.

■ Manual Soldering
Soldering Temperature: $350^{\circ} \mathrm{C}$ Max.
Continuous Soldering Time: 5 second Max.

■ Precautions in Handling

1. Care must be taken to ensure excess flux on the top surface of the printed circuit board does not adhere to the switch.
2. Do not wash the switch.

- Recommended storage conditions:

Store the products in the original packaging material. After opening the package, the remaining products must be stored in the appropriate moisture-proof \& airtight environment.

Do not store the switch in the following environment or it may affect performance and solderability:

1. temperatures below $-10^{\circ} \mathrm{C}$ to $40^{\circ} \mathrm{C}$ \& humidity at $85 \%$ (min)
2. environment with corrosive gas
3. storage over 6 months
4. place in direct sunlight
