title: RS-232 To TTL Conveter (MAX3232IDR) category: Grove bzurl:  
oldwikiname: prodimagenam: surveyurl: sku: 103990363 tags:

Most of the MCUs use TTL levels, and the computer serial port generally uses 232 levels. If we want the computer to communicate with the MCU, we need this **RS-232 To TTL Conveter (MAX3232IDR)**.

This module is based on Max3232, it supports multiple baud rate communication and theoretically supports communication up to 230400bps baud.

[Get One Now !\[\]\(c3d993ca47bfe2a953c700506ce31fa0\_img.jpg\)](#)

## Feature

- Easy to use
- Stable, high speed
- High cost performance
- $\pm 15$ -kV ESD Protection
- Low power consumption
- Two Drivers and Two Receivers

## Specification

<b>Item</b>	<b>Value</b>
Supply Voltage	3.3V / 5V
Driver input voltage	0V ~ 5.5V
Receiver input voltage	-25V ~ +25V
Supply current(No load)	0.3mA
Operating free-air temperature	-40°C ~ 85°C
Storage temperature range	-65°C ~ 150°C
Maximum data rate	250 Kbit/s
Support baud rate	300bps ~ 230400bps
Length	46mm
Width	42mm
Height	16.5mm

!!!Attention When using a higher baud rate, you need to pay attention to whether the connected MCU supports it.

## Typical Applications

- Hand-Held Equipment
- Palmtop PCs

## Hardware Overview

### Pin Out

- 4 **RX**: connect to the device **TX**
- 3 **TX**: connect to the device **RX**
- 2 **VCC**: you can use 5V or 3.3V for this module
- 1 **GND**: connect this module to the system GND
- 5 **Max3232 chip**
- 6 **LED indicator**
- 7 **DB9 Port**

## Getting Started

This is a simple module that only needs to connect the corresponding interface to the corresponding device to transfer data using the serial port tool. You should note that when connecting a TTL device, the RX pin of the module needs to be connected to the TX pin of the device, and vice versa, the TX pin of the module needs to be connected to the RX pin of the device.
