

Art.-No. 78580

Anti-Marten Duo

Dual connect

Anti-Marten Duo is our most versatile marten scarer. In case of marten problems in the car it can be hooked up to the car battery by using the included cable.

If powering by car battery is not required or when the device is meant to be used outside the engine bay, it can be operated using AA batteries (not included). Ideal for marten problems in the attic.

The device emits high frequent tones in 30 second intervals in order to startle martens. Other places will appear more pleasant for the animals. In addition, an LED flashes in 60 second intervals. Anti-Marten Duo has an integrated sensor, that will switch the device off in case of vibration, for power saving when used in the engine bay.

Cable ties and screws for installation are included.

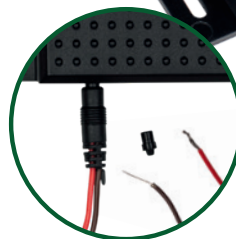

can be connected to the car battery
