ME817EV BT817 Evaluation Board Datasheet

1 Introduction

The ME817EV is a customer evaluation board for Bridgetek's 4th generation EVE chip, BT817. The ME817EV is used to develop and demonstrate BT817's graphics, touch and audio functionalities. The board is capable of supporting LCD panels with 40-pin LVDS interface, or 50-pin RGB interface. Backlight LED current can be adjusted using dip switches. Capacitive touch screens can be connected to the board through a 10-pin or 6-pin FPC connector. An Audio filter and amplifier are included on-board, allowing a 1/8W speaker to be driven. Audio source can be supplied from the BT817, or through a line-in connector.

The ME817EV board supports 2 types of host controller: MCU with SPI/QSPI master, or USB host, selectable through dip switches. The SPI option of the board behaves as a SPI slave, and requires a SPI Master for proper micro-controller interfacing and system integration. The USB option of the board behaves as a USB High-speed device using the FTDI [FT4222H](#), and requires control from a USB host through the Type-C connector.

For a full list of the BT817's features, refer to the [BT817_8 Datasheet](#).

1.1 Features

The ME817EV has the following features:

- Supports 40-pin LVDS display up to 1280x800
- Supports 50-pin RGB display up to 1024x600
- Trimmable on board LCD biasing voltages
- On board LCD backlight LED Driver
- On board audio power amplifier and audio connector for external speaker support
- On board 16Mbyte NOR Flash Memory
- 10-pin or 6-pin FPC connector for capacitive touch screen
- Supports SPI host interface through 2x8 pin header or 20pin FPC connector
- Supports USB High-speed connection with FT4222H
- 5V power supply via SPI host connector, or via USB Type-C port

3 Hardware Description

Please refer to section [3.2.2](#) for connector settings. Some ME817EV jumpers must be set to work properly with your system.

3.1 ME817EV board

Figure 3-1 – ME817EV board top view

Figure 3-2 – ME817EV board bottom view

The main functions of the ME817EV are as follows:

- USB Type-C or SPI connector for power supply
- 3.3V regulator. Takes 5V input and outputs 3.3V for on-board circuits
- AVDD/VGH/VGL/VCOM biasing voltages for LCD power
- LCD backlight driver. Drive current 120mA – 280mA with over voltage protection (OVP) of 35V
- 3 stage audio filter and power amplifier
- Audio connector for external speaker and audio line in
- 10-pin and 6-pin FPC connector for capacitive touch screen
- On board 16M byte SPI NOR flash memory
- FT4222H USB to QSPI master bridge
- 2x8 pin header for MM900 series microcontroller modules or generic MCU
- 20-pin 1.0mm FPC connector for generic MCU

3.2 Physical Descriptions

3.2.1 PCB layout

The ME817EV is a 160mm x 100mm, four-layer printed circuit board. Board thickness is approximately 1.6mm.

3.2.2 ME817EV Connectors

Connectors and jumpers are described in the following sections.

- **JP1 – Power source select for the board**

JP1 is the jumper option for users to select the 5V power supply source for the board.

Pin Option	Description
OPEN	5V Power from CN6 USBC1 VBUS
1-2 SHORT	5V Power from CN11 USBC2 VBUS (CN6 must not connect)
2-3 SHORT	5V Power from CN7 or CN8 5V_HOST (CN6 must not connect)

- **JP2 – Power source select for the 40-pin LVDS panel**

JP2 is the jumper option for users to select the 2.5V/3.3V power supply for the 40-pin LVDS panel (CN9).

Pin Option	Description
1-2 SHORT	Select 2.5V power supply
2-3 SHORT	Select 3.3V power supply

5 Hardware Setup

5.1 Power Configuration

There are 3 methods of powering the ME817EV board.

- 1) PC USB port Power(5V) - Connect to PC via Type-C cable to CN11
- 2) USBC charger Power(5V) - Connect USB charger with Type-C cable to CN6
- 3) Power from MCU host board(5V) - Connect 5V to CN8 pin 10 or CN7 pin 3&4

The following table summarises how to power the ME817EV board using the various methods.

Power Method	CN11	CN6	CN8 Pin 10 (or CN7 pin3&4)	JP1
PC USB port power (5V)	5V	Must not connect	Don't care	Short pin 1-2
USBC charger power (5V)	Don't care	5V	Don't care	open
MCU host board power (5V)	Don't care	Must not connect	5V	Short pin 2-3

Table 5-1 – Board power configuration

5.2 Backlight LED current Configuration

The ME817EV module has a backlight LED driver circuit on-board. The driver takes 5V as an input power source, and the regulator produces the output voltage so that the desired total output current can be drawn by the backlight LED. Users can select backlight current up to a maximum of 280mA via dip switch SW1. By default, with all the 4 switches in SW1 turned OFF, resistor R44 (2.4 Ohm) is setting the minimum backlight current at 120mA. The switches in S12 are connected to array resistor RP9 (4 x 7.5 Ohm). Turning ON each switch will provide an additional backlight current of 40mA per switch.

Backlight LED array	Vled voltage	Vled current	SW1 Number of ON position	Comment
6 x 6	19.2V	120mA	0	
8 x 3	9.6V	160mA	1	
10 x 3	9.6V	200mA	2	
12 x 3	9.6V	240mA	3	
14 x 3	9.6V	280mA	4	

Table 5-2 – Backlight LED configuration

5.3 Compatible LCD panel

The ME817EV supports 2 types of LCD interface:

1. LVDS panel with 40-pin 0.5mm FPC cable or connector
2. RGB panel with 50-pin 0.5mm FPC cable or connector

Table 5-3 lists a few LCD panels which have been tested as working with the ME817EV board.

5.4 Hardware Setup Example 1: MM900EV with 7" LCD

This example uses a Riverdi 7" TFT with CTP (RiTFT-70H-CAP) for display and touch functions. The host controller will utilize Bridgetek's MM900EV module built with FT900 32-bit MCU controller.

The RiTFT-70H-CAP outline size is the same as the ME817EV PCB. It is possible to put the LCD and PCB together back-to-back to form a display module assembly.

Hardware Setup

- Plug the USB Type-C cable into the CN6-USBC1 connector, with the other end plugged to a USB power source (at least 1.5A current rating)
- Trim variable resistors VR1-VR4 to get required LCD biasing voltages as: AVDD=9.6V, VGL=-6V, VGH=18V, VCOM=3.8V.
- Un-plug the USB Type-C cable to remove the power
- Connect the LCD display 50-pin FPC cable to CN1
- Connect the LCD touch 10-pin FPC cable to CN2
- On SW2, set all 8 positions to OFF. On SW1, set SW1-1 to ON, SW1-2/3/4 to OFF
- Set JP1 to short pin2-3
- Connect the [MM900EV](#) module to CN8. A [UMFTPD2A](#) programming/debug module is also recommended for programming the FT900.
- Plug the USB Type-C cable to turn on the power

Software Setup

- Download EVE Toolchains at <https://brtchip.com/eve-toolchains/> .
- Download EVE sample applications at <https://brtchip.com/SoftwareExamples-eve/> .
- Launch the Sample Application based on FT900 platform.

The [BT81X Programming Guide](#) describes the programming code and formats used by the BT81X. The Sample Application is a well-formatted and documented program that illustrates the Programming Guide, and provides numerous design examples and reference code demonstrations.

Figure 5-1 – MM900 setup with 7" 1024x600 panel

Figure 5-2 – 7" Module assembly

5.5 Hardware Setup Example 2: FT4222 with 10.1" LCD

This example uses an A-TOPS 10.1" 1280x800 TFT with CTP (AT-T101QIH-48CP) for display and touch functions. The host will be PC, connected by utilizing the on-board FTDI FT4222H USB to QSPI bridge.

Hardware Setup

- On SW2, set all 8 positions to ON. On SW1, set all 4 positions to OFF
- Set JP1 to short pin1-2
- Plug the USB Type-C cable to CN11-USBC2 connector, with the other end plugged to PC USB port (at least 1.5A current rating).
- Trim variable resistors VR1-VR4 to get required LCD biasing voltages as: AVDD=8.2V, VGL=-7V, VGH=22V, VCOM=3.3V.
- Un-plug the USB Type-C cable to remove the power
- Connect the LCD display 40-pin FPC connector to CN9 through 40-pin FPC cable
- Connect the LCD touch 10-pin FPC cable to CN12
- Plug the USB Type-C cable to turn on the power

Software Setup

- Follow section 5.4 to download EVE toolchain and sample application.
- When re-compiling the sample application, select EVE_GRAPHICS_ME817EV in the Processor Definitions of SampleApp MSVC Property Pages, as shown in the screenshot below. For more details, please refer to the user manual of EveApps.
