

#### **Features**

- Universal input 195~264V AC
- Short Circuit Output Protected
- Approved to UKCA, CE
- LVD & EMC Class B Certified, RoHS & REACH compliant
- 12-48V Lead Acid 3 Stage Control (Fast/Normal/Float)
- OVP, OCP, OTP & Dept. Short Circuit
- LED Charge Indicators Included

Ideal Power's 31ACNN12\_24\_36\_48 Range of 12-48V Lead Acid Battery Chargers Series are certified to UKCA, CE, RoHS, REACH & EN 62368-1 Standards and comply with the relevant Efficiency Regulations. These are primarily used in ITE, Audio & Video Industries and customised solutions are available upon request.

Models	31AC2512	31AC2512 31AC3512 31AC1424 31AC2024A* 31AC0836 31AC							
Input Voltage		195~264V AC / 230V AC +/-15%							
Input Frequency		47Hz ~ 63Hz / 50-60Hz +/- 5%							
Output Max Current	25A	35A	14A	20A	8A	10A			
Output Power	300W	420W	336W	480W	288W	480W			
Output Voltage		14.6~13.7V DC Float charge / absorption charge							
Ripple & Noise		115 ~ 350 mVp-p (model dependant)							
Isolation		Input isolate Chassis : 500M OHM							
Battery Application		Lead Acid Battery							
Fan Control	Fa	Fan on fast speed: Bulk/Absorption charge Fan on slow speed: Float charge							
LED - Power		Red							
LED - Charging		Orange							
LED – Fully Charged		Green							
DC Cable		1.0M Mount clips							
Dimensions			240 x 180 x 70	6 (LxWxH) mm					
Weight		3.0 (Kgs)

## Three Steps of Charging & Charge Curve

Step 1	Bulk charge – bring batteries to 75% capacity fast.
	During this stage charging occurs at full power, which means maximum current, until the battery voltage reached the set limit.
Step 2:	Absorption Charge, boost – slow the current flow, adjusting for maximum efficiency and gently topping off batteries.  During absorption charging the current decreases as the battery approached full charge.
Step 3	Trickle Charge – for longer period, maintains fully charged batteries without harmful effects of overcharging and cooking. Trickle charge is intended to keep the battery in a fully charged state and compensates for self-discharge. When the current reaches setting point the battery switches to a maintenance charge at a constant voltage. Should the battery be in use and the charge current Subsequently exceed
