Notes

1. Duration of clamping pulse is determined by $C_{4\text{-}27}$ as follows: t_d (μs) = 1,364 . $C_{4\text{-}27}$ (nF).

2. White clipping level is fixed by the external resistors at pin 16, e.g. $R_{16\text{-}25}$ = 3,3 kΩ and $R_{16\text{-}27}$ = 2 kΩ results in 160% clipping level.

3. FM output amplitude at pins 22 and 23 is determined by the external fixed resistors $R_{21\text{-}27}$, $R_{22\text{-}18}$ and $R_{23\text{-}18}$.
