Part Number: 5.16.02 FLASHER PORTABLE PLUS

Description: Programmer, Flasher Portable Plus

Flasher Portable PLUS is a programming tool for microcontrollers with on-chip and/or external flash memory. It is an extremely portable, production grade, flash programmer used for in-field firmware updates. No need to be tethered to an outlet, or lug around bulky external battery packs, the Flasher Portable is powered by a built-in Li-Ion battery. Supports ARM, Cortex, PowerPC, Renesas RX and Renesas RL78 cores. For a complete list, please refer to the Supported Device List. This device comes with a license for the software item 8.08.02 J-Flash, which is the software used to configure the Flasher Portable PLUS. Flash memory stores the target program and target information. It can store multiple programming images. A target system is required.

Includes:

- Flasher Portable PLUS
- 20 Pin 0.1" Ribbon Cable
- USB Cable
- Li-Ion Battery
