

### Model Number

MB-F32-A2

### Features

- For mounting on a hydraulic cylinder
- Detects the piston position through the cylinder wall
- Suitable for magnetic, hydraulic cylinders made of steel

### Connection

## Dimensions

## Technical Data

### General specifications

Switching element function	PNP	NO/NC
Connection	Switching output 1 : black Switching output 2 : white on the cylinder	
Installation	on the cylinder	
Output polarity	DC	
Switching range	$s_b$	typ. 50 mm

### Nominal ratings

Operating voltage	$U_B$	10 ... 30 V DC
Reverse polarity protected	reverse polarity protected	
Short-circuit protection	pulsing	
Voltage drop	$U_d$	$\leq 1.5$ V
Operating current	$I_L$	0 ... 100 mA
No-load supply current	$I_0$	$\leq 30$ mA

### Functional safety related parameters

MTTF <sub>d</sub>	739 a
Mission Time (T <sub>M</sub> )	20 a
Diagnostic Coverage (DC)	0 %

### Indicators/operating means

LED indicator	red: switching state output 1 yellow: switching state output 2
---------------	---

### Ambient conditions

Ambient temperature	-25 ... 85 °C (-13 ... 185 °F)
Storage temperature	-40 ... 85 °C (-40 ... 185 °F)

### Mechanical specifications

Connection type	cable PVC , 2 m
Core cross-section	0.5 mm <sup>2</sup>
Housing material	Polyamide (PA)
Sensing face	Polyamide (PA)
Protection degree	IP67

### Compliance with standards and directives

Standard conformity	
Standards	EN 60947-5-2:2007 IEC 60947-5-2:2007

### Approvals and certificates

CCC approval	Products with a maximum operating voltage of $\leq 36$ V do not bear a CCC marking because they do not require approval.
--------------	--

**Magnetic System**

Primary Construction of the Magnetic System

For this sensor principle it is not sufficient to simply mount the permanent magnet onto the piston. A magnetic system has to be constructed which conducts the magnetic flux of the permanent magnets directly into the cylinder wall in order to achieve the strongest possible magnetization. For further details regarding the construction of magnetic systems, refer to the manual. A field trial is generally recommended before practical operation!

**Magnets**

The magnets are axially magnetized. It must be ensured that all magnets are mounted with the same polarity!

**Definition of polarity**

An approaching permanent magnet with the north pole pointing towards the cable connection of the sensor causes output 1 to respond and the red LED to light.

**Antivalent output**

By means of the sensor's antivalent output stage the appropriate output can be chosen depending on the polarity of the magnetic system or the mounting location of the sensor

**Mounting**

The sensor is mounted directly on the surface towards the cylinder axis. For this purpose, pressure bands, tightening straps, or hose band clamps can be used.
