

# EZ-USB® CX3: MIPI CSI-2 to SuperSpeed USB Bridge Controller

## Features

- Universal Serial Bus (USB) integration
  - USB 3.0 and USB 2.0 peripherals, compliant with USB 3.0 specification 1.0
  - 5-Gbps USB 3.0 PHY compliant with PIPE 3.0
  - Thirty-two physical endpoints
- MIPI CSI-2 RX interface
  - MIPI CSI-2 compliant (Version 1.01, Revision 0.04 – 2<sup>nd</sup> April 2009)
  - Supports up to four data lanes (CYUSB3065 supports up to four lanes; CYUSB3064 supports up to two lanes)
  - Each lane supports up to 1 Gbps (CYUSB3065 supports up to four lanes; CYUSB3064 supports up to two lanes)
  - CCI interface for image sensor configuration
- Supports the following video data formats:
  - User-defined 8-bit
  - RAW8/10/12/14
  - YUV422 (CCIR/ITU 8/10bit), YUV444
  - RGB888/666/565
- Fully accessible 32-bit CPU
  - ARM926EJ-S core with 200-MHz operation
  - 512-KB or 256-KB embedded SRAM
- Additional connectivity to the following peripherals:
  - I<sup>2</sup>C master controller at 1 MHz
  - I<sup>2</sup>S master (transmitter only) at sampling frequencies of 32 kHz, 44.1 kHz, and 48 kHz
  - UART support of up to 4 Mbps
  - SPI master at 33 MHz
- Twelve GPIOs
- Ultra-low-power in core power-down mode
- Independent power domains for core and I/O
  - Core operation at 1.2 V
  - I<sup>2</sup>S, UART, and SPI operation at 1.8 to 3.3 V
  - I<sup>2</sup>C, I/O operation at 1.8 to 3.3 V
- 10 × 10 mm, 0.8-mm pitch Pb-free ball grid array (BGA) package
- EZ-USB® software development kit (SDK) for easy code development

## Applications

- Digital video cameras
- Digital still cameras
- Webcams
- Scanners
- Video conference systems
- Gesture-based control
- Surveillance cameras
- Medical imaging devices
- Video IP phones
- USB microscopes
- Industrial cameras

### Logic Block Diagram

## More Information

Cypress provides a wealth of data at [www.cypress.com](http://www.cypress.com) to help you to select the right device for your design, and to help you to quickly and effectively integrate the device into your design. ### EZ-USB Software Development Kit

Cypress delivers the complete firmware stack for CX3, in order to easily integrate SuperSpeed USB into any embedded MIPI image sensor application. The [Software Development Kit \(FX3 SDK\)](#) comes with tools, drivers and application examples, which help accelerate application development. The FX3 SDK Setup includes CX3 APIs and example firmware for OmniVision OV5640 and Aptina AS0260 image sensor interface. The [eclipse plugin](#) for the FX3 SDK accelerates CX3 firmware development for any other image sensor.

## Functional Overview

Cypress's EZ-USB CX3 is the next-generation bridge controller that can connect devices with the Mobile Industry Processor Interface – Camera Serial Interface 2 (MIPI CSI-2) interface to any USB 3.0 Host.

CX3 has a 4-lane CSI-2 receiver with up to 1 Gbps on each lane. It supports video data formats such as RAW8/10/12/14, YUV422 (CCIR/ITU 8/10-bit), RGB888/666/565, and user-defined 8-bit.

CX3 has integrated the USB 3.0 and USB 2.0 physical layers (PHYs) along with a 32-bit ARM926EJ-S microprocessor for powerful data processing and for building custom applications.

CX3 contains 512 KB of on-chip SRAM (see [Ordering Information on page 27](#)) for code and data. EZ-USB CX3 also provides interfaces to connect to serial peripherals such as UART, SPI, I<sup>2</sup>C, and I<sup>2</sup>S.

CX3 comes with application development tools. The software development kit comes with application examples for accelerating time-to-market.

CX3 complies with the USB 3.0 v1.0 specification and is also backward compatible with USB 2.0. It also complies with the MIPI CSI-2 v1.01, revision 0.04 specification dated 2<sup>nd</sup> April 2009.

## Application Examples

In a typical application (see [Figure 1](#)), CX3 acts as the main processor and connects to an image sensor, an audio device, or camera control devices amongst others.

Figure 1. EZ-USB CX3 Example Application

## USB Interface

CX3 complies with the following specifications and supports the following features:

- Supports USB peripheral functionality compliant with USB 3.0 Specification, Revision 1.0, and is also backward compatible with the USB 2.0 Specification.
- As a peripheral, CX3 is capable of SuperSpeed, High-Speed, and Full-Speed.
- Supports up to 16 IN and 16 OUT endpoints
- Supports the USB 3.0 Streams feature
- As a USB peripheral, CX3 supports USB-attached storage (UAS), USB Video Class (UVC), and Media Transfer Protocol (MTP) USB peripheral classes. As a USB peripheral, all other device classes are supported only in pass-through mode when handled entirely by a host processor external to the device.

Figure 2. USB Interface Signals

## ReNumeration

Because of CX3’s soft configuration, one chip can take on the identities of multiple distinct USB devices.

When first plugged into USB, CX3 enumerates automatically with the Cypress Vendor ID (0x04B4) and downloads the firmware and USB descriptors over the USB interface. The downloaded firmware executes an electrical disconnect and connect. CX3 enumerates again, this time as a device defined by the downloaded information. This patented two-step process, called ReNumeration, happens instantly when the device is plugged in.

## VBUS Overvoltage Protection

The maximum input voltage on CX3’s VUSB pin is 6 V. A charger can supply up to 9 V on VUSB. In this case, an external overvoltage protection (OVP) device is required to protect CX3 from damage on VUSB. Figure 3 shows the system application diagram with an OVP device connected on VUSB. Refer to DC Specifications on page 17 for the operating range of VUSB.

**Note:** The VBUS pin of the USB connector should be connected to the VUSB pin of CX3.

Figure 3. System Diagram with OVP Device For VUSB

## MIPI CSI-2 RX Interface

The Mobile Industry Processor Interface (MIPI) association defined the Camera Serial Interface 2 (CSI-2) standard to enable image data to be sent on high-bandwidth serial lines.

CX3 implements a MIPI CSI-2 Receiver with the following features:

1. It can receive clock and data in 1, 2, 3, or 4 lanes. (CYUSB3065 part supports up to four lanes; CYUSB3064 part supports up to two lanes)
2. Up to 1 Gbps of data on each CSI lane is supported (total maximum bandwidth should not exceed 2.4 Gbps).
3. Video formats such as RAW8/10/12/14, YUV422 (CCIR/ITU 8/10-bit), RGB888/666/565, and User-Defined 8-bit are supported
4. A CCI interface (compatible with 100-kHz or 400-kHz I<sup>2</sup>C interface with 7-bit addressing) is provided to configure the sensor.
5. GPIOs are available for synchronization of external flash or lighting system with image sensors to illuminate the scene that improves the image quality by improving Signal to noise ratio.
6. GPIOs can also be used to synchronize the image sensor with external events, so that image can be captured based on external event.
7. Serial interfaces (such as I<sup>2</sup>C, I<sup>2</sup>S, SPI, UART) are available to implement camera functions such as Auto focus and Pan, Tilt, Zoom (PTZ)

## Additional Outputs

In addition to the standard MIPI CSI-2 signals, the following three additional outputs are provided:

1. X\_RST: this can be used to reset the image sensor
2. X\_SHUTDOWN: this pin can be used to put the sensor to a standby/shutdown mode
3. M\_CLK: this pin can provide the clock output. It can be used only for testing the image sensor. For production, use an external clock generator as clock input for image sensors.

## CPU

CX3 has an on-chip 32-bit, 200-MHz ARM926EJ-S core CPU. The core has direct access to 16 kB of Instruction Tightly Coupled Memory (TCM) and 8 kB of data TCM. The ARM926EJ-S core provides a JTAG interface for firmware debugging.

CX3 offers the following advantages:

- Integrates 512 KB of embedded SRAM for code and data and 8 kB of instruction cache and data cache.
- Implements efficient and flexible DMA connectivity between the various peripherals (such as, USB, CSI-2 Rx, I<sup>2</sup>S, SPI, and UART), requiring firmware only to configure data accesses between peripherals, which are then managed by the DMA fabric.
- Allows easy application development on industry-standard development tools for ARM926EJ-S.

Examples of the CX3 firmware are available with the Cypress EZ-USB CX3 Development Kit. Software APIs that can be ported to an external processor are available with the Cypress EZ-USB CX3 Software Development Kit.

## JTAG Interface

CX3's JTAG interface has a standard five-pin interface to connect to a JTAG debugger in order to debug firmware through the CPU-core's on-chip-debug circuitry.

Industry-standard debugging tools for the ARM926EJ-S core can be used for the CX3 application development.

## Other Interfaces

CX3 supports the following serial peripherals:

- UART
- I<sup>2</sup>C
- I<sup>2</sup>S
- SPI

The [CYUSB306X Pin List on page 15](#) shows the details of how these interfaces are mapped.

## UART Interface

The UART interface of CX3 supports full-duplex communication. It includes the signals noted in [Table 1](#).

**Table 1. UART Interface Signals**

Signal	Description
TX	Output signal
RX	Input signal
CTS	Flow control
RTS	Flow control

The UART is capable of generating a range of baud rates, from 300 bps to 4608 Kbps, selectable by the firmware. If flow control is enabled, then CX3's UART only transmits data when the CTS input is asserted. In addition to this, CX3's UART asserts the RTS output signal, when it is ready to receive data.

## I<sup>2</sup>C Interface

CX3's I<sup>2</sup>C interface is compatible with the I<sup>2</sup>C Bus Specification Revision 3. This I<sup>2</sup>C interface is capable of operating only as I<sup>2</sup>C master; therefore, it may be used to communicate with other I<sup>2</sup>C slave devices. For example, CX3 may boot from an EEPROM connected to the I<sup>2</sup>C interface, as a selectable boot option.

CX3's I<sup>2</sup>C Master Controller also supports multi-master mode functionality.

The power supply for the I<sup>2</sup>C interface is V<sub>DDIO1</sub>, which is a separate power domain from the other serial peripherals. This gives the I<sup>2</sup>C interface the flexibility to operate at a different voltage than the other serial interfaces.

The I<sup>2</sup>C controller supports bus frequencies of 400 kHz, and 1 MHz. When V<sub>DDIO1</sub> is 1.8 V, 2.5 V, or 3.3 V, the operating frequencies supported are 400 kHz and 1 MHz. The I<sup>2</sup>C controller supports the clock-stretching feature to enable slower devices to exercise flow control.

The I<sup>2</sup>C interface's SCL and SDA signals require external pull-up resistors. The pull-up resistors must be connected to V<sub>DDIO1</sub>.

**Note:** I<sup>2</sup>C addresses with the pattern 0x0000111x are used internally and no slave devices with those addresses should be connected to the bus.

### I<sup>2</sup>S Interface

CX3 has an I<sup>2</sup>S port to support external audio codec devices. CX3 functions as I<sup>2</sup>S Master as transmitter only. The I<sup>2</sup>S interface consists of four signals: clock line (I2S\_CLK), serial data line (I2S\_SD), word select line (I2S\_WS), and master system clock (I2S\_MCLK). CX3 can generate the system clock as an output on I2S\_MCLK or accept an external system clock input on I2S\_MCLK.

The sampling frequencies supported by the I<sup>2</sup>S interface are 32 kHz, 44.1 kHz, and 48 kHz.

### SPI Interface

CX3 supports an SPI Master interface on the Serial Peripherals port. The maximum operation frequency is 33 MHz.

The SPI controller supports four modes of SPI communication (see [SPI Timing Specification on page 24](#) for details on the modes) with the Start-Stop clock. This controller is a single-master controller with a single automated SSN control. It supports transaction sizes ranging from 4 bits to 32 bits.

## Boot Options

CX3 can load boot images from various sources, selected by the configuration of the PMODE pins. Following are the CX3 boot options:

- Boot from USB
- Boot from I<sup>2</sup>C
- Boot from SPI (SPI devices supported are M25P16 (16 Mbit), M25P80 (8 Mbit), and M25P40 (4 Mbit)) or their equivalents

**Table 2. CX3 Booting Options**

PMODE[2:0] <sup>[1]</sup>	Boot From
F11	USB boot
F1F	I <sup>2</sup> C, On failure, USB boot is enabled
1FF	I <sup>2</sup> C only
0F1	SPI, On failure, USB boot is enabled

## Reset

### Hard Reset

A hard reset is initiated by asserting the RESET# pin on CX3. The specific reset sequence and timing requirements are detailed in [Figure 11 on page 26](#) and [Table 14 on page 26](#). All I/Os are tristated during a hard reset.

An additional reset pin called MIPI\_RESET is provided that resets the MIPI CSI-2 core. It should be pulled down with a resistor for normal operation.

### Soft Reset

There are two types of Soft Reset:

- CPU Reset – The CPU Program Counter is reset. Firmware does not need to be reloaded following a CPU Reset.
- Whole Device Reset – This reset is identical to Hard Reset. The firmware must be reloaded following a Whole Device Reset.

#### Note

1. F indicates Floating.

## Clocking

CX3 requires two clocks for normal operation:

1. A 19.2-MHz clock to be connected at the CLKIN pin
2. A 6-MHz to 40-MHz clock to be connected at the REFCLK pin

Clock inputs to CX3 must meet the phase noise and jitter requirements specified in [Table 3 on page 9](#).

The input clock frequency is independent of the clock and data rate of the CX3 core or any of the device interfaces (including the CSI-2 Rx Port). The internal PLL applies the appropriate clock-multiply option depending on the input frequency.

**Note:** REFCLK and CLKIN must have either separate clock inputs or if the same source is used, the clock must be passed through a buffer with two outputs and then connected to the clock pins.

**Table 3. CX3 Input Clock Specifications**

Parameter	Description	Specification		Units
		Min	Max	
Phase noise	100-Hz offset	–	–75	dB
	1-kHz offset	–	–104	dB
	10-kHz offset	–	–120	dB
	100-kHz offset	–	–128	dB
	1-MHz offset	–	–130	dB
Maximum frequency deviation	–	–	150	ppm
Duty cycle	–	30	70	%
Overshoot	–	–	3	%
Undershoot	–	–	–3	%
Rise time/fall time	–	–	3	ns

### 32-kHz Watchdog Timer Clock Input

CX3 includes a watchdog timer. The watchdog timer can be used to interrupt the ARM926EJ-S core, automatically wake up the CX3 in Standby mode, and reset the ARM926EJ-S core. The watchdog timer runs a 32-kHz clock, which may be optionally supplied from an external source on a dedicated CX3 pin.

The firmware can disable the watchdog timer.

[Table 4](#) provides the requirements for the optional 32-kHz clock input

**Table 4. 32-kHz Clock Input Requirements**

Parameter	Min	Max	Units
Duty cycle	40	60	%
Frequency deviation	–	±200	ppm
Rise time/fall time	–	200	ns

## Power

CX3 has the following power supply domains:

- **IO\_VDDQ:** This is a group of independent supply domains for digital I/Os.
  - **V<sub>DDIO1</sub>:** GPIO, I<sup>2</sup>C, JTAG, XRST, XSHUTDOWN and REF-CLK
  - **V<sub>DDIO2</sub>:** UART and I<sup>2</sup>S (except MCLK)
  - **V<sub>DDIO3</sub>:** I<sup>2</sup>S\_MCLK and SPI
  - **C<sub>VDDQ</sub>:** CLKIN
  - **V<sub>DD\_MIPI</sub>:** MIPI CSI-2 clock and data lanes
- **V<sub>DD</sub>:** This is the supply voltage for the logic core. The nominal supply-voltage level is 1.2 V. This supplies the core logic circuits. The same supply must also be used for the following:
  - **A<sub>VDD</sub>:** This is the 1.2 V supply for the PLL, crystal oscillator, and other core analog circuits.
  - **U3TXVDDQ/U3RXVDDQ:** These are the 1.2 V supply voltages for the USB 3.0 interface.
- **V<sub>USB</sub>:** This is the 4 V to 6 V power supply for the USB I/O and analog circuits. This supply powers the USB transceiver through CX3's internal voltage regulator. V<sub>USB</sub> is internally regulated to 3.3 V.

**Note:** The different power supplies have to be powered on or off in a specific sequence as illustrated in [Figure 4](#).

## Power Modes

CX3 supports the following power modes:

- **Normal mode:** This is the full-functional operating mode. The internal CPU clock and the internal PLLs are enabled in this mode.
  - Normal operating power consumption does not exceed the sum of I<sub>CC</sub> Core max and I<sub>CC</sub> USB max (see [DC Specifications on page 17](#) for current consumption specifications).
  - The I/O power supplies V<sub>DDIO2</sub> and V<sub>DDIO3</sub> can be turned off when the corresponding interface is not in use. V<sub>DDIO1</sub> should never be turned off for normal operation.
- **Low-power modes** (see [Table 5 on page 11](#)):
  - Suspend mode with USB 3.0 PHY enabled
  - Standby mode
  - Core power-down mode

**Figure 4. Power-up Sequence**

**Table 5. Entry and Exit Methods for Low-Power Modes**

Low-Power Mode	Characteristics	Methods of Entry	Methods of Exit
Suspend Mode with USB 3.0 PHY Enabled	<ul style="list-style-type: none"> <li>■ Power consumption in this mode does not exceed <math>I_{SB1}</math></li> <li>■ USB 3.0 PHY is enabled and is in U3 mode (one of the suspend modes defined by the USB 3.0 specification). This one block alone is operational with its internal clock, while all other clocks are shut down</li> <li>■ All I/Os maintain their previous state</li> <li>■ Power supply for the wakeup source and core power must be retained. All other power domains can be turned on or off individually</li> <li>■ The states of the configuration registers, buffer memory, and all internal RAM are maintained</li> <li>■ All transactions must be completed before CX3 enters suspend mode (state of outstanding transactions are not preserved)</li> <li>■ The firmware resumes operation from where it was suspended (except when woken up by RESET# assertion) because the program counter does not reset</li> </ul>	<ul style="list-style-type: none"> <li>■ Firmware executing on ARM926EJ-S core can put CX3 into the suspend mode. For example, on USB suspend condition, the firmware may decide to put CX3 into suspend mode</li> </ul>	<ul style="list-style-type: none"> <li>■ D+ transitioning to low or high</li> <li>■ D- transitioning to low or high</li> <li>■ Resume condition on SSRX±</li> <li>■ Detection of VBUS</li> <li>■ Level detect on UART_CTS (programmable polarity)</li> <li>■ Assertion of RESET#</li> </ul>
Standby Mode	<ul style="list-style-type: none"> <li>■ The power consumption in this mode does not exceed <math>I_{SB3}</math></li> <li>■ All configuration register settings and program/data RAM contents are preserved. However, data in the buffers or other parts of the data path, if any, is not guaranteed. Therefore, the external processor should take care that the data needed is read before putting CX3 into the standby mode</li> <li>■ The program counter is reset after waking up from the standby mode</li> <li>■ GPIO pins maintain their configuration</li> <li>■ Internal PLL is turned off</li> <li>■ USB transceiver is turned off</li> <li>■ ARM926EJ-S core is powered down. Upon wakeup, the core re-starts and runs the program stored in the program/data RAM</li> <li>■ Power supply for the wakeup source and core power must be retained. All other power domains can be turned on or off individually</li> </ul>	<ul style="list-style-type: none"> <li>■ The firmware executing on ARM926EJ-S core or external processor configures the appropriate register</li> </ul>	<ul style="list-style-type: none"> <li>■ Detection of VBUS</li> <li>■ Level detect on UART_CTS (programmable polarity)</li> <li>■ Assertion of RESET#</li> </ul>

**Table 5. Entry and Exit Methods for Low-Power Modes (continued)**

Low-Power Mode	Characteristics	Methods of Entry	Methods of Exit
Core Power-down Mode	<ul style="list-style-type: none"> <li>■ The power consumption in this mode does not exceed <math>ISB_4</math></li> <li>■ Core power is turned off</li> <li>■ All buffer memory, configuration registers, and the program RAM do not maintain state. After exiting this mode, reload the firmware</li> <li>■ In this mode, all other power domains can be turned on or off individually</li> </ul>	<ul style="list-style-type: none"> <li>■ Turn off <math>V_{DD}</math></li> </ul>	<ul style="list-style-type: none"> <li>■ Reapply <math>V_{DD}</math></li> <li>■ Assertion of RESET#</li> </ul>

## Configuration Options

Configuration options are available for specific usage models. Contact Cypress Marketing ([usb3@cypress.com](mailto:usb3@cypress.com)) for details.

### Digital I/Os

CX3 has internal firmware-controlled pull-up or pull-down resistors on all digital I/O pins. An internal 50-k $\Omega$  resistor pulls the pins high, while an internal 10-k $\Omega$  resistor pulls the pins low to prevent them from floating. The I/O pins may have the following states:

- Tristated (High-Z)
- Weak pull-up (via internal 50 k $\Omega$ )
- Pull-down (via internal 10 k $\Omega$ )
- Hold (I/O hold its value) when in low-power modes
- The JTAG TDI, TMC, and TRST# signals have fixed 50-k $\Omega$  internal pull-ups, and the TCK signal has a fixed 10-k $\Omega$  pull-down resistor.

All unused I/Os should be pulled high by using the internal pull-up resistors. All unused outputs should be left floating. All I/Os can be driven at full-strength, three-quarter strength, half-strength, or quarter-strength. These drive strengths are configured separately for each interface.

### GPIOs

CX3 provides 12 pins for general purpose I/O (for example, can be used for lighting, sync-in, sync-out and so on). See [Pin Configuration on page 14](#) for pinout details.

All GPIO pins support an external load of up to 16 pF for every pin.

### EMI

CX3 can meet EMI requirements outlined by FCC 15B (USA) and EN55022 (Europe) for consumer electronics at system level. CX3 can tolerate reasonable EMI, conducted by the aggressor, outlined by these specifications and continue to function as expected.

### System-level ESD

CX3 has built-in ESD protection on the D+, D-, and GND pins on the USB interface. The ESD protection levels provided on these ports are:

- $\pm 2.2$ -kV human body model (HBM) based on JESD22-A114 specification
- $\pm 6$ -kV contact discharge and  $\pm 8$ -kV air gap discharge based on IEC61000-4-2 level 3A using external system-level protection devices
- $\pm 8$ -kV contact discharge and  $\pm 15$ -kV air gap discharge based on IEC61000-4-2 level 4C using external system-level protection devices

This protection ensures that the device continues to function after ESD events up to the levels stated in this section.

The SSRX+, SSRX-, SSTX+, and SSTX- pins only have up to  $\pm 2.2$ -kV HBM internal ESD protection.

## Absolute Maximum Ratings

Exceeding maximum ratings may shorten the useful life of the device.

Storage temperature .....	-65 °C to +150 °C
Supply voltage to ground potential $V_{DD}$ , $A_{VDDQ}$ .....	1.25 V
$V_{DDIO1}$ , $V_{DDIO2}$ , $V_{DDIO3}$ .....	3.6 V
$U3TX_{VDDQ}$ , $U3RX_{VDDQ}$ .....	1.25 V
DC input voltage to any input pin .....	$V_{CC} + 0.3$
DC voltage applied to outputs in high Z state ( $V_{CC}$ is the corresponding I/O voltage) .....	$V_{CC} + 0.3$
Maximum latch-up current .....	140 mA
Maximum output short-circuit current for all I/O configurations. ( $V_{OUT} = 0$ V) .....	-100 mA

## Operating Conditions

$T_A$ (ambient temperature under bias)	
Industrial .....	-40 °C to +85 °C
$V_{DD}$ , $A_{VDDQ}$ , $U3TX_{VDDQ}$ , $U3RX_{VDDQ}$	
Supply voltage .....	1.15 V to 1.25 V
$V_{USB}$ supply voltage .....	4 V to 6 V
$V_{DDIO1}$ , $V_{DDIO2}$ , $V_{DDIO3}$ , $C_{VDDQ}$	
Supply voltage .....	1.7 V to 3.6 V

## DC Specifications

Parameter	Description	Min	Max	Units	Notes
$V_{DD}$	Core voltage supply	1.15	1.25	V	1.2-V typical
$A_{VDD}$	Analog voltage supply	1.15	1.25	V	1.2-V typical
$V_{DD\_MIPI}$	MIPI bridge D-PHY supply voltage	1.15	1.25	V	1.2-V typical
$V_{DDIO1}$	I <sup>2</sup> C, JTAG and GPIO power domain	1.7	3.6	V	1.8-, 2.5-, and 3.3-V typical
$V_{DDIO2}$	UART/I <sup>2</sup> S power supply domain	1.7	3.6	V	1.8-, 2.5-, and 3.3-V typical
$V_{DDIO3}$	SPI/I <sup>2</sup> S power supply domain	1.7	3.6	V	1.8-, 2.5-, and 3.3-V typical
$V_{USB}$	USB voltage supply	4	6	V	5-V typical
$U3TX_{VDDQ}$	USB 3.0 1.2-V supply	1.15	1.25	V	1.2-V typical. A 22- $\mu$ F bypass capacitor is required on this power supply.
$U3RX_{VDDQ}$	USB 3.0 1.2-V supply	1.15	1.25	V	1.2-V typical. A 22- $\mu$ F bypass capacitor is required on this power supply.
$C_{VDDQ}$	Clock voltage supply	1.7	3.6	V	1.8-, 3.3-V typical
$V_{IH1}$	Input HIGH voltage 1	$0.625 \times V_{CC}$	$V_{CC} + 0.3$	V	For $2.0 \text{ V} \leq V_{CC} \leq 3.6 \text{ V}$ (except USB and MIPI CSI-2 pins). $V_{CC}$ is the corresponding I/O voltage supply.
$V_{IH2}$	Input HIGH voltage 2	$V_{CC} - 0.4$	$V_{CC} + 0.3$	V	For $1.7 \text{ V} \leq V_{CC} \leq 2.0 \text{ V}$ (except USB and MIPI CSI-2 pins). $V_{CC}$ is the corresponding I/O voltage supply.
$V_{IL}$	Input LOW voltage	-0.3	$0.25 \times V_{CC}$	V	$V_{CC}$ is the corresponding I/O voltage supply.
$V_{OH}$	Output HIGH voltage	$0.9 \times V_{CC}$	-	V	$I_{OH}(\text{max}) = -100 \mu\text{A}$ tested at quarter drive strength. $V_{CC}$ is the corresponding I/O voltage supply.
$V_{OL}$	Output LOW voltage	-	$0.1 \times V_{CC}$	V	$I_{OL}(\text{min}) = +100 \mu\text{A}$ tested at quarter drive strength. $V_{CC}$ is the corresponding I/O voltage supply.

**DC Specifications** (continued)

Parameter	Description	Min	Max	Units	Notes
$I_{IX}$	Input leakage current for all pins except SSTXP/SSXM/SSRXP/SSRXM	-1	1	$\mu A$	All I/O signals held at $V_{DDQ}$ (For I/Os with a pull-up or pull-down resistor connected, the leakage current increases by $V_{DDQ}/R_{PU}$ or $V_{DDQ}/R_{PD}$ )
$I_{OZ}$	Output High-Z leakage current for all pins except SSTXP/SSXM/SSRXP/SSRXM and MIPI CSI-2 signals	-1	1	$\mu A$	All I/O signals held at $V_{DDQ}$
$I_{CC}$ Core	Core and analog voltage operating current	-	192	mA	Total current through $A_{VDD}$ , $V_{DD}$
$I_{CC}$ USB	USB voltage supply operating current	-	60	mA	-
$I_{SB1}$	Total suspend current during suspend mode with USB 3.0 PHY enabled	Core: 558.35 $\mu A$	-	$\mu A$	Core Current is measured through $V_{DD}$ , $A_{VDD}$ and $V_{DD\_MIPI}$ .
		I/O: 4.58 $\mu A$	-	$\mu A$	
		USB: 4672 $\mu A$	-	$\mu A$	
$I_{SB3}$	Total standby current during core power-down mode	Core: 148.31 $\mu A$	-	$\mu A$	USB Current is measured through $V_{USB}$ , $U3TX_{VDDQ}$ and $U3RX_{VDDQ}$ .
		I/O: 3.16 $\mu A$	-	$\mu A$	
		USB: 15.8 $\mu A$	-	$\mu A$	
$V_{RAMP}$	Voltage ramp rate on core and I/O supplies	0.2	12	V/ms	Voltage ramp must be monotonic
$V_N$	Noise level permitted on $V_{DD}$ and I/O supplies	-	100	mV	Max p-p noise level permitted on all supplies except $A_{VDD}$
$V_{N\_AVDD}$	Noise level permitted on $A_{VDD}$ supply	-	20	mV	Max p-p noise level permitted on $A_{VDD}$

**MIPI D-PHY Electrical Characteristics**

Parameter	Description	Spec			Unit
		Min	Nom	Max	
<b>MIPI D-PHY RX DC Characteristics</b>					
$V_{PIN}$	Pin signal voltage range	-50	-	1350	mV
$V_{IH}$	Logic 1 input voltage	880	-	-	mV
$V_{IL}$	Logic 0 input voltage	-	-	550	mV
$V_{CMRX}$ (DC)	Common-mode voltage HS receiver mode	70	-	330	mV
$V_{IDTH}$	Differential input high threshold		-	70	mV
$V_{IDTL}$	Differential input low threshold	-70	-	-	mV
$V_{IHHS}$	Single-ended input high voltage		-	460	mV
$V_{ILHS}$	Single-ended input low voltage	-40	-	-	mV

## AC Timing Parameters

### MIPI Data to Clock Timing Reference

Figure 6. MIPI CSI Signal Data to Clock Timing Reference

Table 7. MIPI Data to Clock Timing Reference

Parameter	Description	Min	Max	Units
$T_{SKEW}$	Data to clock skew measured at the transmitter	-0.15	0.15	$U_{I_{INST}}$
$T_{SETUP}$	Data to clock setup time at receiver	0.15	-	$U_{I_{INST}}$
$T_{HOLD}$	Clock to data hold time at receiver	0.15	-	$U_{I_{INST}}$
$U_{I_{INST}}$	One data bit time (instantaneous)	1	12.5	ns
$T_{CLKp}$	Period of dual data rate clock	2	25	ns

### Reference Clock Specifications

Table 8. Reference Clock Specifications

Parameter	Description	Min	Max	Units	Notes
RefClk	Reference clock frequency	6	40	MHz	-
RefclkDutyCyl	Duty cycle	40%	60%	-	-
RefClkPJ	Reference clock input period jitter	-100	100	ps	-

**MIPI CSI Signal Low Power AC Characteristics**
**Figure 7. MIPI CSI bus Input Glitch Rejection**

**Table 9. MIPI CSI Signal Low Power AC Characteristics**

Parameter	Description	Min	Max	Units	Notes
$e_{\text{SPIKE}}$	Input noise rejection	–	300	V.ps	Time-voltage integration of a spike above $V_{\text{IL}}$ when being in LP-0 or below $V_{\text{IH}}$ when being in LP-1 state. An impulse less than this will not change the receiver state.
$T_{\text{MIN-RX}}$	Minimum pulse width response	20	–	ns	An input pulse greater than this shall toggle the output.
$V_{\text{INT}}$	peak interference amplitude	–	200	mV	–
$F_{\text{INT}}$	Interference frequency	450	–	MHz	–
$T_{\text{LPX}}$	Length of any low power state period	50	–	ns	–

**AC Specifications**
**Table 10. AC Specifications**

Parameter	Description	Min	Max	Units	Details / Conditions
$\Delta V_{\text{CMRX(HF)}}$	Common-mode interference beyond 450 MHz	–	100	mV	$\Delta V_{\text{CMRX(HF)}}$ is the peak amp. Of a sine wave superimposed on the receiver inputs.
$\Delta V_{\text{CMRX(LF)}}$	Common-mode interference beyond 50 - 450 MHz	-50	50	mV	Excluding static ground shift of 50 mV. Voltage difference compared to the DC average common-mode potential

Serial Peripherals Timing

I<sup>2</sup>C Timing

Figure 8. I<sup>2</sup>C Timing Definition

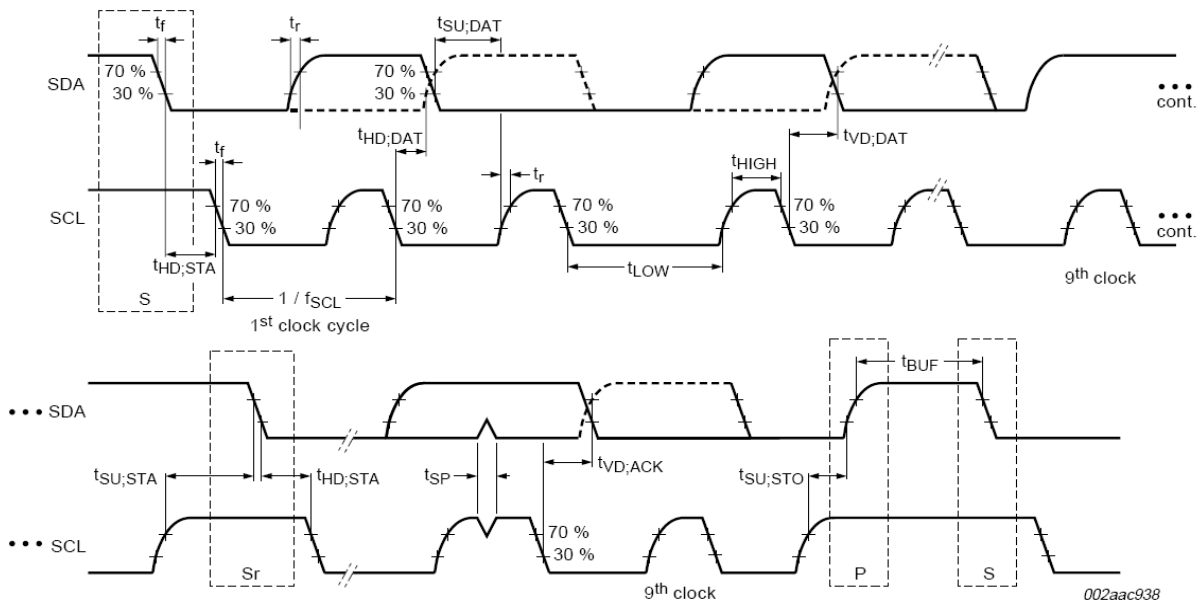

Table 11. I<sup>2</sup>C Timing Parameters<sup>[2]</sup>

Parameter	Description	Min	Max	Units
<b>I<sup>2</sup>C Standard Mode Parameters</b>				
f <sub>SCL</sub>	SCL clock frequency	0	100	kHz
t <sub>HD:STA</sub>	Hold time START condition	4	–	μs
t <sub>LOW</sub>	LOW period of the SCL	4.7	–	μs
t <sub>HIGH</sub>	HIGH period of the SCL	4	–	μs
t <sub>SU:STA</sub>	Setup time for a repeated START condition	4.7	–	μs
t <sub>HD:DAT</sub>	Data hold time	0	–	μs
t <sub>SU:DAT</sub>	Data setup time	250	–	ns
t <sub>r</sub>	Rise time of both SDA and SCL signals	–	1000	ns
t <sub>f</sub>	Fall time of both SDA and SCL signals	–	300	ns
t <sub>SU:STO</sub>	Setup time for STOP condition	4	–	μs
t <sub>BUF</sub>	Bus free time between a STOP and START condition	4.7	–	μs
t <sub>VD:DAT</sub>	Data valid time	–	3.45	μs
t <sub>VD:ACK</sub>	Data valid ACK	–	3.45	μs
t <sub>SP</sub>	Pulse width of spikes that must be suppressed by input filter	n/a	n/a	

Note

2. All parameters guaranteed by design and validated through characterization.

**Table 11. I<sup>2</sup>C Timing Parameters<sup>[2]</sup> (continued)**

Parameter	Description	Min	Max	Units
<b>I<sup>2</sup>C Fast Mode Parameters</b>				
f <sub>SCL</sub>	SCL clock frequency	0	400	kHz
t <sub>HD:STA</sub>	Hold time START condition	0.6	–	μs
t <sub>LOW</sub>	LOW period of the SCL	1.3	–	μs
t <sub>HIGH</sub>	HIGH period of the SCL	0.6	–	μs
t <sub>SU:STA</sub>	Setup time for a repeated START condition	0.6	–	μs
t <sub>HD:DAT</sub>	Data hold time	0	–	μs
t <sub>SU:DAT</sub>	Data setup time	100	–	ns
t <sub>r</sub>	Rise time of both SDA and SCL signals	–	300	ns

t <sub>BUF</sub>	Bus free time between a STOP and START condition	1.3	–	μs
t <sub>VD:DAT</sub>	Data valid time	–	0.9	μs
t <sub>VD:ACK</sub>	Data valid ACK	–	0.9	μs
t <sub>SP</sub>	Pulse width of spikes that must be suppressed by input filter	0	50	ns
<b>I<sup>2</sup>C Fast Mode Plus Parameters</b>				
f <sub>SCL</sub>	SCL clock frequency	0	1000	kHz
t <sub>HD:STA</sub>	Hold time START condition	0.26	–	μs
t <sub>LOW</sub>	LOW period of the SCL	0.5	–	μs
t <sub>HIGH</sub>	HIGH period of the SCL	0.26	–	μs
t <sub>SU:STA</sub>	Setup time for a repeated START condition	0.26	–	μs
t <sub>HD:DAT</sub>	Data hold time	0	–	μs
t <sub>SU:DAT</sub>	Data setup time	50	–	ns
t <sub>r</sub>	Rise time of both SDA and SCL signals	–	120	ns
t <sub>f</sub>	Fall time of both SDA and SCL signals	–	120	ns
t <sub>SU:STO</sub>	Setup time for STOP condition	0.26	–	μs
t <sub>BUF</sub>	Bus-free time between a STOP and START condition	0.5	–	μs
t <sub>VD:DAT</sub>	Data valid time	–	0.45	μs
t <sub>VD:ACK</sub>	Data valid ACK	–	0.55	μs
t <sub>SP</sub>	Pulse width of spikes that must be suppressed by input filter	0	50	ns

I<sup>2</sup>S Timing Diagram

Figure 9. I<sup>2</sup>S Transmit Cycle

Table 12. I<sup>2</sup>S Timing Parameters<sup>[3]</sup>

Parameter	Description	Min	Max	Units
$t_T$	I <sup>2</sup> S transmitter clock cycle	$t_{TR}$	–	ns
$t_{TL}$	I <sup>2</sup> S transmitter cycle LOW period	$0.35 t_{TR}$	–	ns
$t_{TH}$	I <sup>2</sup> S transmitter cycle HIGH period	$0.35 t_{TR}$	–	ns
$t_{TR}$	I <sup>2</sup> S transmitter rise time	–	$0.15 t_{TR}$	ns
$t_{TF}$	I <sup>2</sup> S transmitter fall time	–	$0.15 t_{TR}$	ns
$t_{Thd}$	I <sup>2</sup> S transmitter data hold time	0	–	ns
$t_{Td}$	I <sup>2</sup> S transmitter delay time	–	$0.8 t_T$	ns

**Note**  $t_T$  is selectable through clock gears. Max  $t_{TR}$  is designed for 96-kHz codec at 32 bits to be 326 ns (3.072 MHz).

**Note**

3. All parameters guaranteed by design and validated through characterization.

SPI Timing Specification

Figure 10. SPI Timing

SPI Master Timing for CPHA = 0

SPI Master Timing for CPHA = 1

**Table 13. SPI Timing Parameters<sup>[4]</sup>**

Parameter	Description	Min	Max	Units
$f_{op}$	Operating frequency	0	33	MHz
$t_{sck}$	Cycle time	30	–	ns
$t_{wsck}$	Clock HIGH/LOW time	13.5	–	ns
$t_{lead}$	SSN-SCK lead time	$1/2 t_{sck}^{[5]} - 5$	$1.5 t_{sck}^{[5]} + 5$	ns
$t_{lag}$	Enable lag time	0.5	$1.5 t_{sck}^{[5]} + 5$	ns
$t_{rf}$	Rise/fall time	–	8	ns
$t_{sdd}$	Output SSN to valid data delay time	–	5	ns
$t_{dv}$	Output data valid time	–	5	ns
$t_{di}$	Output data invalid	0	–	ns
$t_{ssnh}$	Minimum SSN HIGH time	10	–	ns
$t_{sdi}$	Data setup time input	8	–	ns
$t_{hoi}$	Data hold time input	0	–	ns
$t_{dis}$	Disable data output on SSN HIGH	0	–	ns

**Notes**

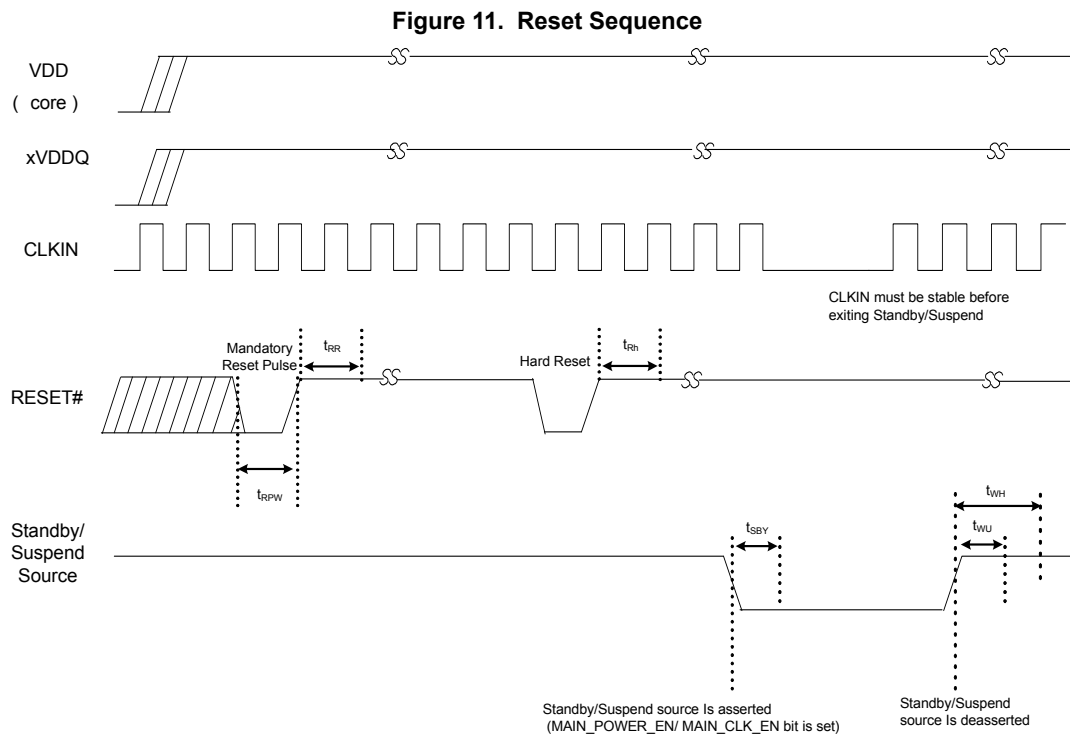

4. All parameters guaranteed by design and validated through characterization.
5. Depends on LAG and LEAD setting in the SPI\_CONFIG register.

## Reset Sequence

CX3's hard reset sequence requirements are specified in this section.

**Table 14. Reset and Standby Timing Parameters**

Parameter	Definition	Conditions	Min (ms)	Max (ms)
$t_{RPW}$	Minimum RESET# pulse width	Clock Input	1	–
$t_{RH}$	Minimum HIGH on RESET#	–	5	–
$t_{RR}$	Reset recovery time (after which the boot loader begins firmware download)	Clock Input	1	–
$t_{SBY}$	Time to enter standby/suspend mode (from the time MAIN_CLOCK_EN/ MAIN_POWER_EN bit is set)	–	–	1
$t_{WU}$	Time to wakeup from standby	Clock Input	1	–
$t_{WH}$	Minimum time before standby/suspend source may be reasserted	–	5	–

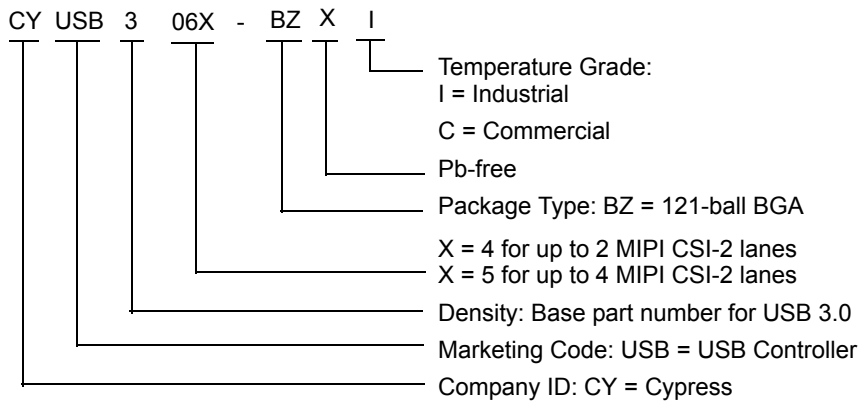

## Ordering Information

**Table 15. Ordering Information**

Ordering Code	MIPI CSI-2 Lanes	Package Type	Temperature Grade
CYUSB3065-BZXI	4	121-ball BGA	Industrial
CYUSB3065-BZXC	4	121-ball BGA	Commercial
CYUSB3064-BZXI	2	121-ball BGA	Industrial
CYUSB3064-BZXC	2	121-ball BGA	Commercial

### Ordering Code Definitions

Package Diagram

## Acronyms

**Table 16. Acronyms Used in this Document**

Acronym	Description
CSI - 2	Camera Serial Interface - 2
DMA	Direct Memory Access
DNU	Do Not Use
HNP	Host Negotiation Protocol
MIPI	Mobile Industry Processor Interface
MMC	Multimedia Card
MTP	Media Transfer Protocol
PLL	Phase Locked Loop
PMIC	Power Management IC
SD	Secure Digital
SDIO	Secure Digital Input / Output
SLC	Single-Level Cell
SPI	Serial Peripheral Interface
SRP	Session Request Protocol
USB	Universal Serial Bus
WLCSP	Wafer Level Chip Scale Package

## Document Conventions

### Units of Measure

**Table 17. Units of Measure**

Symbol	Unit of Measure
°C	degree Celsius
Mbps	Megabits per second
MBps	Megabytes per second
MHz	megahertz
μA	microampere
μs	microsecond
mA	milliampere
ms	millisecond
ns	nanosecond
Ω	ohm
pF	picofarad
V	volt

## Errata

This section describes the errata for CX3. Details include errata trigger conditions, scope of impact, available workaround, and silicon revision applicability. Contact your local Cypress Sales Representative if you have questions.

### Part Numbers Affected

Part Number	Device Characteristics
CYUSB306x-xxxx	All Variants

### Qualification Status

Product Status: Production

### Errata Summary

The following table defines the errata applicability to available EZ-USB CX3 SuperSpeed USB Controller family devices.

Items	[Part Number]	Silicon Revision	Fix Status
1. Turning off VDDIO1 during Normal, Suspend, and Standby modes causes the CX3 to stop working.	CYUSB306x-xxxx	All	Workaround provided
2. USB enumeration failure in USB boot mode when CX3 is self-powered.	CYUSB306x-xxxx	All	Workaround provided
3. Extra ZLP is generated by the COMMIT action in the GPIF II state.	CYUSB306x-xxxx	All	Workaround provided
4. Invalid PID Sequence in USB 2.0 ISOC data transfer.	CYUSB306x-xxxx	All	Workaround provided
5. USB data transfer errors are seen when ZLP is followed by data packet within same microframe.	CYUSB306x-xxxx	All	Workaround provided
6. Bus collision is seen when the I2C block is used as a master in the I2C Multi-master configuration.	CYUSB306x-xxxx	All	Use CX3 in single-master configuration

#### 1. Turning off VDDIO1 during Normal, Suspend, and Standby modes causes the CX3 to stop working.

##### ■ Problem Definition

Turning off the VDDIO1 during Normal, Suspend, and Standby modes will cause the CX3 to stop working.

##### ■ Parameters Affected

N/A

##### ■ Trigger Conditions

This condition is triggered when the VDDIO1 is turned off during Normal, Suspend, and Standby modes.

##### ■ Scope Of Impact

CX3 stops working.

##### ■ Workaround

VDDIO1 must stay on during Normal, Suspend, and Standby modes.

##### ■ Fix Status

No fix. Workaround is required.

## 2. USB enumeration failure in USB boot mode when CX3 is self-powered.

### ■ Problem Definition

CX3 device may not enumerate in USB boot mode when it is self-powered. The bootloader is designed for bus power mode. It does not make use of the VUSB pin on the USB connector to detect the USB connection and expect that USB bus is connected to host if it is powered. If CX3 is not already connected to the USB host when it is powered, then it enters into low-power mode and does not wake up when connected to USB host.

### ■ Parameters Affected

N/A

### ■ Trigger Conditions

This condition is triggered when CX3 is self-powered in USB boot mode.

### ■ Scope of Impact

Device does not enumerate

### ■ Workaround

Reset the device after connecting to USB host.

### ■ Fix Status

No fix. Workaround is required.

## 3. Extra ZLP is generated by the COMMIT action in the GPIF II state.

### ■ Problem Definition

When COMMIT action is used in a GPIF-II state without IN\_DATA action then an extra Zero Length Packet (ZLP) is committed along with the data packets.

### ■ Parameters Affected

N/A

### ■ Trigger Conditions

This condition is triggered when COMMIT action is used in a state without IN\_DATA action.

### ■ Scope of Impact

Extra ZLP is generated.

### ■ Workaround

Use IN\_DATA action along with COMMIT action in the same state.

### ■ Fix Status

No fix. Workaround is required.

#### 4. Invalid PID Sequence in USB 2.0 ISOC data transfer.

##### ■ Problem Definition

When the CX3 device is functioning as a high speed USB device with high bandwidth isochronous endpoints, the PID sequence of the ISO data packets is governed solely by the isomult setting. The length of the data packet is not considered while generating the PID sequence during each microframe. For example, even if a short packet is being sent on an endpoint with MULT set to 2; the PID used will be DATA2.

##### ■ Parameters Affected

N/A

##### ■ Trigger Conditions

This condition is triggered when high bandwidth ISOC transfer endpoints are used.

##### ■ Scope of Impact

ISOC data transfers failure.

##### ■ Workaround

This problem can be worked around by reconfiguring the endpoint with a lower isomult setting prior to sending short packets, and then switching back to the original value.

##### ■ Fix Status

No fix. Workaround is required.

#### 5. USB data transfer errors are seen when ZLP is followed by data packet within same microframe.

##### ■ Problem Definition

Some data transfer errors may be seen if a Zero Length Packet is followed very quickly (within one microframe or 125  $\mu$ s) by another data packet on a burst enabled USB IN endpoint operating at super speed.

##### ■ Parameters Affected

N/A

##### ■ Trigger Conditions

This condition is triggered in SuperSpeed transfer with ZLPs.

##### ■ Scope of Impact

Data failure and lower data speed.

##### ■ Workaround

The solution is to ensure that some time is allowed to elapse between a ZLP and the next data packet on burst enabled USB IN endpoints. If this cannot be ensured at the data source, the `CyU3PDmaChannelSetSuspend()` API can be used to suspend the corresponding USB DMA socket on seeing the EOP condition. The channel operation can then be resumed as soon as the suspend callback is received.

##### ■ Fix Status

No fix. Workaround is required.

**6. Bus collision is seen when the I<sup>2</sup>C block is used as a master in the I<sup>2</sup>C Multi-master configuration.****■ Problem Definition**

When CX3 is used as a master in the I<sup>2</sup>C multi-master configuration, there can be occasional bus collisions.

**■ Parameters Affected**

NA

**■ Trigger Conditions**

This condition is triggered only when the CX3 I<sup>2</sup>C block operates in Multi-master configuration.

**■ Scope of Impact**

The CX3 I<sup>2</sup>C block can transmit data when the I<sup>2</sup>C bus is not idle leading to bus collision.

**■ Workaround**

Use CX3 as a single master.

**■ Fix Status**

No fix.

Document History Page

Document Title: CYUSB306X, EZ-USB <sup>®</sup> CX3: MIPI CSI-2 to SuperSpeed USB Bridge Controller				
Document Number: 001-87516				
Revision	ECN	Orig. of Change	Submission Date	Description of Change
**	3994736	KUMR	05/09/2013	New datasheet
*A	4065766	KUMR	07/17/2013	Updated <a href="#">Logic Block Diagram</a> . Updated <a href="#">Pin Description</a> . Updated <a href="#">DC Specifications</a> . Replaced “VBUS” and “VBATT” by “VUSB” in all instances across the document. Updated in new template.
*B	4080302	KUMR	07/29/2013	Updated status as “Preliminary”.
*C	4088328	KUMR	08/06/2013	Updated <a href="#">Pin Configuration</a> (Updated <a href="#">Figure</a> ).
*D	4113754	KUMR	09/04/2013	Updated <a href="#">Clocking</a> : Added a Note at the bottom of section. Updated <a href="#">Pin Description</a> . Updated <a href="#">Table 6</a> . Updated <a href="#">DC Specifications</a> : Updated description of V <sub>DDIO2</sub> parameter. Updated description of V <sub>DDIO3</sub> parameter. Changed maximum value of I <sub>CC</sub> Core parameter from 200 mA to 380 mA.
*E	4188453	KUMR	11/14/2013	Changed status from Preliminary to Final. Updated <a href="#">Features</a> : Updated description. Updated <a href="#">Applications</a> : Updated description. Updated <a href="#">Logic Block Diagram</a> . Updated <a href="#">Functional Overview</a> . Updated <a href="#">MIPI CSI-2 RX Interface</a> . Updated <a href="#">Additional Outputs</a> : Updated description. Updated <a href="#">Reset</a> . Updated <a href="#">Soft Reset</a> : Updated description. Updated <a href="#">Power</a> . Updated <a href="#">Power Modes</a> . Updated <a href="#">Table 5</a> . Updated “Methods of Entry” corresponding to “Suspend Mode with USB 3.0 PHY Enabled”. Updated “Characteristics” corresponding to “Standby Mode”. Updated <a href="#">EMI</a> : Updated description. Updated <a href="#">System-level ESD</a> : Updated description. Updated <a href="#">Pin Configuration</a> : Updated details of G4, H4, L4, F1, F5, E1, E5, E4, D1, D2, D3, D4, C1, C2, D5, C11 pins in <a href="#">Figure</a> . Updated <a href="#">Pin Description</a> . Updated details in “Pin name” column for G4, H4, L4, F1, F5, E1, E5, E4, D1, D2, D3, D4, C1, C2, D5, C11 pins. Updated <a href="#">Absolute Maximum Ratings</a> : Removed “Ambient temperature with power applied”. Removed “Static discharge voltage ESD protection levels”. Renamed “Latch-up current” as “Maximum latch-up current” and updated the values. Updated <a href="#">DC Specifications</a> : Updated details in “Notes” column corresponding to V <sub>IH1</sub> and V <sub>IH2</sub> parameters. Updated description of I <sub>OZ</sub> parameter. Updated minimum value of I <sub>SB1</sub> and I <sub>SB3</sub> parameters. Updated details in “Notes” column corresponding to I <sub>SB1</sub> and I <sub>SB3</sub> parameters. Added <a href="#">MIPI D-PHY Electrical Characteristics</a> . Updated <a href="#">AC Timing Parameters</a> . Updated <a href="#">MIPI Data to Clock Timing Reference</a> .

Document Title: CYUSB306X, EZ-USB® CX3: MIPI CSI-2 to SuperSpeed USB Bridge Controller Document Number: 001-87516				
Revision	ECN	Orig. of Change	Submission Date	Description of Change
*E (cont.)	4188453	KUMR	11/14/2013	Updated <a href="#">Figure 6</a> . Updated <a href="#">Table 7</a> . Updated minimum value of $U_{I_{INST}}$ parameter. Updated maximum value of $T_{CLKP}$ parameter. Updated <a href="#">MIPI CSI Signal Low Power AC Characteristics</a> : Updated <a href="#">Figure 7</a> . Updated <a href="#">Serial Peripherals Timing</a> . Updated <a href="#">I2C Timing</a> . Updated <a href="#">Table 11</a> : Removed "(Not supported at I2C_VDDQ = 1.2 V)" in "I <sup>2</sup> C Fast Mode Plus Parameters" sub-heading. Updated <a href="#">Reset Sequence</a> . Updated <a href="#">Table 14</a> . Removed "Crystal Input" condition for $t_{RPW}$ , $t_{RR}$ , $t_{WU}$ parameters. Updated <a href="#">Figure 11</a> . Updated <a href="#">Ordering Information</a> : Updated part numbers.
*F	4214952	RAJA	03/12/2014	Updated <a href="#">Features</a> . Updated <a href="#">Functional Overview</a> . Updated <a href="#">Application Examples</a> . Updated <a href="#">Figure 1</a> . Updated <a href="#">Configuration Options</a> : Added email. Updated <a href="#">Pin Description</a> . Updated caption of <a href="#">Table 6</a> . Updated <a href="#">DC Specifications</a> : Updated maximum value of $V_{IL}$ parameter. Updated maximum value of $V_{RAMP}$ parameter. Updated <a href="#">AC Timing Parameters</a> . Updated <a href="#">MIPI CSI Signal Low Power AC Characteristics</a> . Updated <a href="#">Table 9</a> . Updated details in "Notes" column. Updated to new template.
*G	4417040	KUMR	06/23/2014	Updated <a href="#">Power</a> : Updated details of IO_VDDQ power supply domain. Updated <a href="#">DC Specifications</a> : Updated maximum value of $I_{CC}$ Core parameter.
*H	4467092	RAJA	08/06/2014	Added new part numbers: 2 and 4 MIPI CSI-2 lane parts with Industrial and Commercial temperature grades.  HSYNC, VSYNC, PCLK test points mentioned in the pin configuration table MCLK - Signal description updated.  Updated information for CYUSB3064 part number: MIPI_D2P, MIPI_D2N, MIPI_D3P, MIPI_D3N signals not available.
*I	4862446	RAGO	08/13/2015	Added footnote <a href="#">1</a> , and updated <a href="#">Pin Configuration (Figure 5)</a> and <a href="#">Pin Description (Table 6)</a> to indicate grounding of unused MIPI lanes.
*J	4974015	RAGO	10/19/2015	Added <a href="#">More Information</a> .
*K	5283275	RAGO	05/24/2016	Updated to new template. Completing Sunset Review.
