HEATING ELEMENT FOR i-TOOL TRACE, 150 W

The high-performance heating element provides 150 W and ensures extremely fast heat-up and reheating, so that even in the case of heat-intensive soldering, all solder joints can be made at almost identical temperatures. The sensor measures the actual temperature at the very front of the soldering tip. The fast response to temperature changes enables the operator to achieve repeatable high soldering quality. Erska heating elements and soldering tips can be replaced separately. This saves resources and money, because each wearing part is only replaced when it is really necessary.

Technical data:

Nominal power: 150 W
Secondary Voltage: 24 V

Matching with:

Soldering iron i-TOOL TRACE (0140CDJ).
