# **NTC SMD Thermistors**

### With Nickel Barrier Termination NB 21

Chip thermistors are high quality and low cost devices especially developed for surface mounting applications. They are widely used for temperature compensation but can also achieve temperature control of printed circuits.

A nickel barrier metallization provides outstanding qualities of solderability and enables this chip to meet the requirements of the most severe soldering processes.

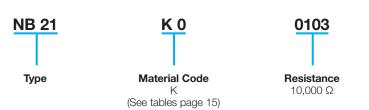

Types	NB 21 IEC SIZE : 0603			
DIMENSIONS: millimeters (inches)	1.6 (.063) 0.2 (.008) 0.8 (.031) ±0.2 (.008) 0.8 (.031) ±0.2 (.008) 0.2 (.008) min			
Terminations	Nickel Barrier			
Marking	On packaging only			
Climatic category	40/125/56			
Operating temperature	-55°C to +150°C			
Tolerance on Rn (25°C)	±5%, ±10%, ±20%			
Maximum dissipation at 25°C	0.07 W			
Thermal dissipation factor	1 mW/°C			
Thermal time constant	4 s			

Resistance - Temperature characteristics: pages 29 to 33.

#### **APPLICATIONS**

- LCD compensation
- Battery packs
- Mobile phones
- CD players
- Heating systems
- Air-conditioning systems
- Temperature control of Switch Mode Power Supplies
- Compensation of pressure sensors
- Protection of power transistors in various electronic circuits

### **HOW TO ORDER**

Suffix: Packaging

--: Bulk

BB: Cardboard tape (180mm diam. reel)

BF: Cardboard tape (1/2 reel)

BD: Cardboard tape (330mm diam. reel)

# **Surface Mounting Guide**

## **Chip Thermistor – Application Notes**

#### **STORAGE**

Good solderability is maintained for at least twelve months, provided the components are stored in their "as received" packaging at less than 40°C and 70% RH.

#### **SOLDERABILITY / LEACHING**

Terminations to be well soldered after immersion in a 60/40 tin/lead solder bath at 235 ± 5°C for 2 ± 1 seconds.

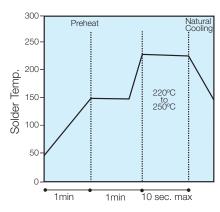

Terminations will resist leaching for at least the immersion times and conditions recommendations shown below.

P/N	Termination Type	Solder Tin/Lead	Solder Temp °C	Immersion Time Seconds
NC	AgPdPt	60/40	260 ± 5	15 max
NB	Nickel Barrier	60/40	260 ± 5	30 ± 1

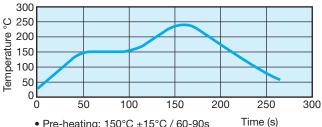

NB products are compatible with a wide range of soldering conditions consistent with good manufacturing practice for surface mount components. This includes Pb free reflow processes with peak temperatures up to 270°C. Recommended profiles for reflow and wave soldering are shown below for reference.

NC products are recommended for lead soldering application or gluing techniques.

#### Reflow

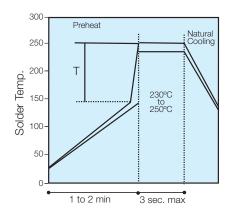

(Minimize soldering time)

- Pre-heating: 150°C ±15°C / 60-90s
  Max. Peak Gradient: 2.5°C/s
- Peak Temperature: 245°C ±5°C
- Time at >230°C: 40s Max.

#### Wave

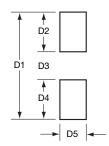

(Preheat chips before soldering) T/maximum 150°C

- a) The visual standards used for evaluation of solder joints will need to be modified as lead free joints are not as bright as with tin-lead pastes and the fillet may not be as large.
- b) Resin color may darken slightly due to the increase in temperature required for the new pastes.
- c) Lead-free solder pastes do not allow the same self alignment as lead containing systems. Standard mounting pads are acceptable, but machine set up may need to be modified.

### **RECOMMENDED SOLDERING PAD** LAYOUT

Dimensions in mm (inches)

#### REFLOW SOLDERING

Case Size	P/N	D1	D2	D3	D4	D5
