ADVANCED PA TUBING

Industrial Automation

In-Plant Automotive

Transportation

Material Handling

Robotics

Pneumatics

Machine Tools

Packaging

Assembly Machines

For Optimizing Your Equipment, Advanced PA Tubing Guarantees:

- Material availability
- Technical performance: thanks to unsurpassed temperature and pressure resistance
- Versatility: due to chemical compatibility and suitability to a large range of applications
- Environmentally-friendly approach

The Best Offer for:

- Better flexibility than all other polyamide tubing
- Superior mechanical performance: excellent abrasion and shock resistance

Advanced PA Tubing Conforms to:

- NF E49-100: for high quality design and long-term reliability
- DIN 74324-1, DIN 73378

> Technical Characteristics

Suitable Fluids	Compressed air, various chemicals, gases and liquids*
Working Pressure	Vacuum up to 50 bar (as per diameter and temperature)
Working Temperature	-40°C to +100°C
Material	Bio-sourced polyamide (68 shore D)

*cf Compatibility Chart, page 6

14	+ 0.05 / - 0.10	1	± 0.08	< 0.20	116

Measurement method

of the bending radius:
Bend the tube into the U-form at a temperature of +20°C (+/- 3°C).
Hold one end and close loop gradually up to 2R measurement between both ends.

> Advanced PA Tubing Performance

To calculate burst measurements, the values in this graph should be multiplied by 3.

Close tolerance to perfect sealing with Parker Legris fittings based on NF E49-100.

With compression fittings, a ferrule must be used.

Where semi-rigid Polyamide was used in standard applications, there is no risk of switching to Advanced PA tubing.

> Tube Marking

- Marking every metre
- Time saved when cutting specific length
- Immediate identification of remaining quantity

> Comparative Product Advantages: Semi-Rigid Polyamide vs. Advanced PA Tubing

Semi-Rigid Polyamide (PHL*)

Parker Legris' polyamide tubing provides optimum mechanical properties, has good chemical resistance and conforms to the NF E49-100 standard. Shore hardness of semi-rigid tubing is 60D.

Advantages of Parker Legris' Semi-Rigid Polyamide Tubing

- Large range of working temperatures and pressures
- Good chemical resistance
- Good humidity resistance
- Constant rigidity, good ageing
- Good absorption of vibrations
- Strong abrasion resistance
- Silicone-free
- Tube length marked every metre

Advanced PA Tubing

Very good flexibility and excellent mechanical resistance, combined with a bio-sourced material, allow Parker Legris' Advanced PA tubing to optimize cabling installation without compromising quality.

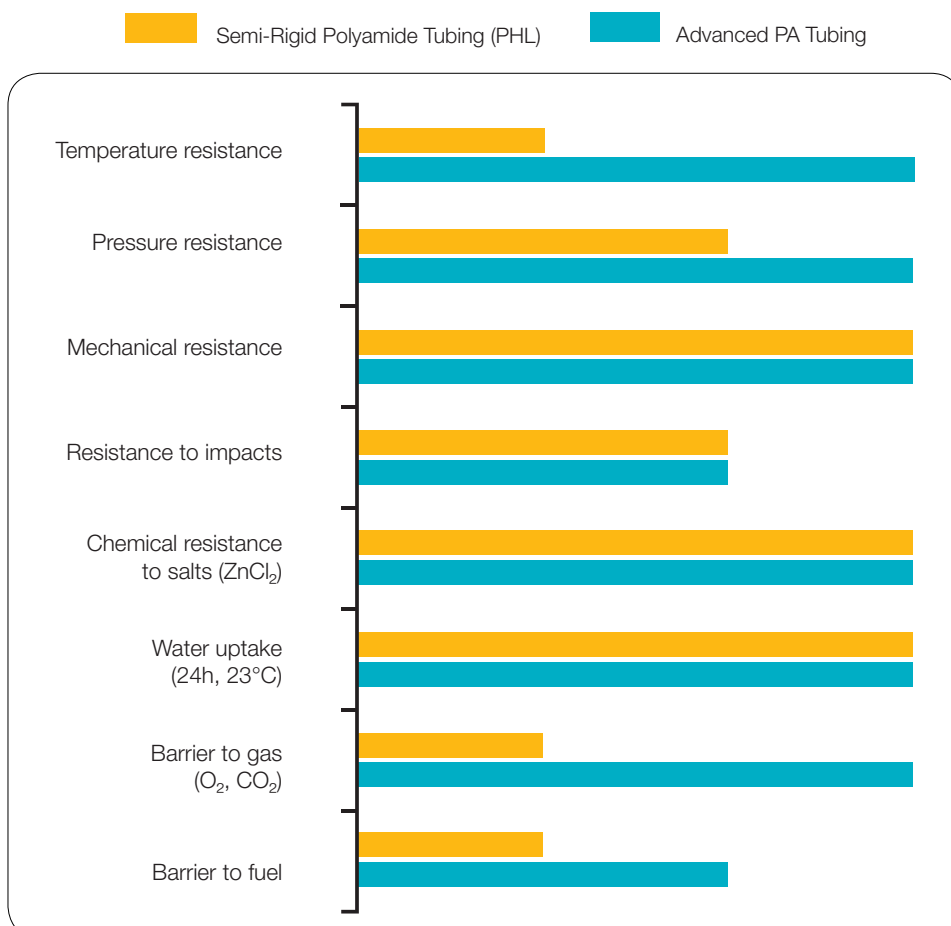

Advanced PA tubing has a shore hardness of 68D and conforms to the NF E49-100 standard.

Advantages of Parker Legris' Advanced PA Tubing

- High resistance to temperature and pressure
- Good chemical resistance
- Very good flexibility and small bend radius
- Constant rigidity, good ageing
- Bio-sourced material
- Strong abrasion resistance
- Silicone-free
- Tube length marked every metre

*PHL (Polymer Ω -Dodecanolactam): plasticized, expandable, heat-ageing and light stabilized.

> Technical Features at a Glance

> Advanced PA: Eco-Design Approach

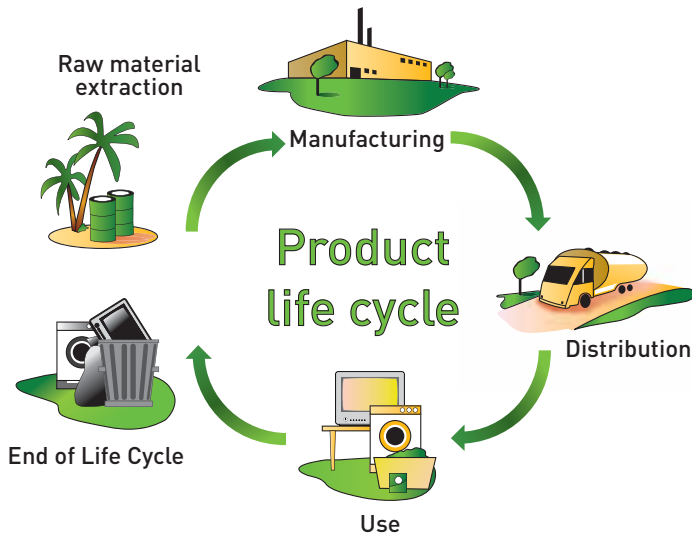

In the manufacturing of Parker Legris' Advanced PA, we have applied the Product Life Cycle Analysis (PLCA). This approach aims to evaluate the environmental impact of a product during its different life cycle stages and thereby:

- allows for the protection of natural resources
- guarantees the improvement of equipment performance
- contributes to your ISO 14001 certification

The use of organic carbon for the polymer manufacturing of this Advanced PA tubing significantly reduces its:

- environmental footprint, hence the depletion of our planet's natural resources
- CO₂ emissions that are in part responsible for global warming

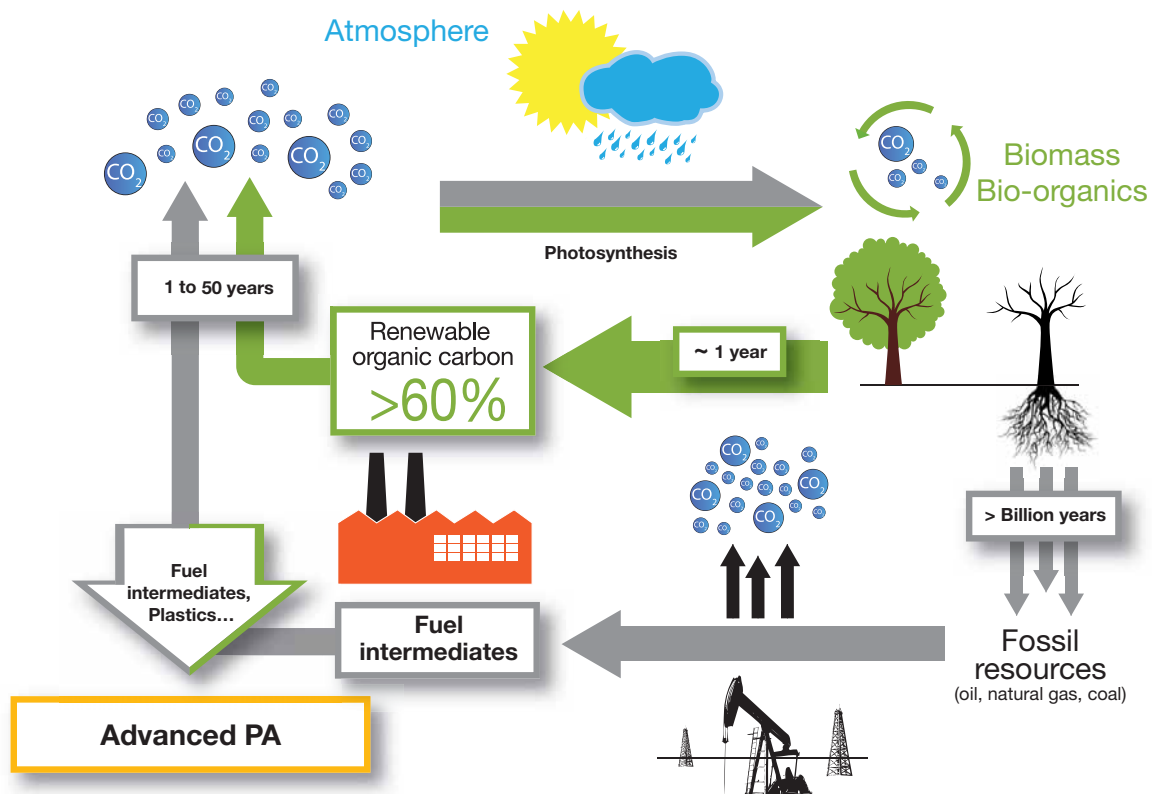

Global Warming:
Gain in terms of CO₂ emissions
during product's life cycle

> Advanced PA: Carbon Cycle

The carbon cycle is an important part of the Product Life Cycle Analysis because it explains:

- the manufacturing process of our Advanced PA tubing
- the impact that a product has on its environment
