

# Micropower Voltage Reference

## FEATURES

- **Guaranteed**  $\pm 4\text{mV}$  Initial Accuracy LT1004-1.2
- **Guaranteed**  $\pm 20\text{mV}$  Accuracy LT1004-2.5
- **Guaranteed**  $10\mu\text{A}$  Operating Current
- **Guaranteed** Temperature Performance
- Operates up to  $20\text{mA}$
- Very Low Dynamic Impedance

## APPLICATIONS

- Portable Meter References
- Portable Test Instruments
- Battery-Operated Systems
- Current Loop Instrumentation

## DESCRIPTION

The **LT<sup>®</sup>1004** micropower voltage reference is a 2-terminal bandgap reference diode designed to provide high accuracy and excellent temperature characteristics at very low operating currents. Optimization of the key parameters in the design, processing and testing of the device results in accuracy specifications previously attainable only with selected units. Below is a distribution plot of reference voltage for a typical lot of LT1004-1.2. Virtually all of the units fall well within the prescribed limits of  $\pm 4\text{mV}$ .

The LT1004 is a pin-for-pin replacement for the LM185/LM385 series of references with improved accuracy specifications. More important, the LT1004 is an attractive device for use in systems where accuracy was previously obtained at the expense of power consumption and trimming.

For a low drift micropower reference with guaranteed temperature coefficient, see the LT1034 data sheet.

**Note 1:** Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

**Note 2:** All specifications are for  $T_A = 25^\circ\text{C}$  unless otherwise noted.

**Note 3:** Selected devices with guaranteed maximum temperature coefficient are available upon request.

For MIL-STD components, please refer to LTC883C data sheet for test listing and parameters.
