**Description of Sensor Function**

The ultrasonic sensor transmits ultrasonic packets in quick succession and responds to their reflection off the detected object. The sensor has a switch output. The switching point is programmable (Teach-In). Objects beyond the taught-in switching point are not detected (background suppression).

**Teach-In of Switching Point SP**

To teach in a switching point, proceed as follows:

1. Connect the sensor and turn on the operating voltage.
2. Place the object to be detected at the required distance.
3. Connect the teach-in input (ET) to  $-U_B$ . This can be done using the pushbutton or the controller.  
The LED will start flashing after 3 seconds to indicate that the sensor is ready to start the teach-in process (\*).
4. Disconnect the teach-in input (ET) with  $-U_B$ . The switching point SP has now been taught in (\*).

(\*) If no object is detected within the sensing range of the sensor, the sensor will start flashing at a faster rate. The switching point remains unchanged.

**Switching characteristics and display LED**
