- 2. Products with lead in terminations fulfil the same requirements as mentioned in this datasheet.
- 3. Products with lead in terminations will be phased out in the coming months (before July 1st, 2006)

**MARKING**

YC324

E-24 series: 3 digits

First two digits for significant figure and 3rd digit for number of zeros

For marking codes, please see EIA-marking code rules in data sheet “Chip resistors marking”.

**CONSTRUCTION**

The resistors are constructed out of a high-grade ceramic body. Internal metal electrodes are added at each end and connected by a resistive paste. The composition of the paste is adjusted to give the approximate required resistance and laser cutting of this resistive layer that achieves tolerance trims the value. The resistive layer is covered with a protective coat. Finally, the eight external terminations (pure Tin) are added. See fig. 2.

FUNCTIONAL DESCRIPTION

**POWER RATING**

YC324 rated power at 70°C is 1/8 W

**RATED VOLTAGE**

The DC or AC (rms) continuous working voltage corresponding to the rated power is determined by the following formula:

$$V = \sqrt{P \times R}$$

Where

V = Continuous rated DC or AC (rms) working voltage (V)

P = Rated power (W)

R = Resistance value (Ω)
