

Precision Air Slide Table
Series MXP
ø6, ø8, ø10, ø12, ø16

Size ø8 introduced to the MXP series

Cylinder: Built-in Linear Guide

New

MXP8

High rigidity, High precision

Cylinder is built into the rail of the linear guide.
Material of body and guide block is martensitic stainless steel.

Stroke adjuster

Three types (rubber stopper, metal stopper, shock absorber) are available.

With shock absorber

MXP
8, 10,
12, 16

Auto switch attachable

Switch rail and magnet (Standard)
Without switch rail and magnet are optional.

Without switch rail and magnet

Highly flexible piping methods

Piping possible in two directions:
vertical or lateral.

Positioning pinhole

Job performance is improved
during maintenance.

< Scale: 100% >

Work mounting tap

① Tapped on table top

② Tapped on table side

Note)
Side mounting with shock absorber and MXP6 is not available.

Highly flexible mounting direction

Mounting from 3 directions.

① Body tapped

② Body through-hole

③ Tapped on body side

Note) Side mounting of MXP6 is not available.

Compact Air Slide Table

Travelling parallelism*: **0.004 mm**
 Parallelism: **0.02 mm**

* Refer to page 6 for details of the traveling parallelism.

Numerous auto switch variations available

Reed switch, solid state switch, and 2-colour indication solid state switch can be mounted.

With auto switches and stroke adjuster

Series	Stroke (mm)						Stroke adjuster			Auto switch
	5	10	15	20	25	30	Rubber stopper	Metal stopper	Shock absorber	
MXP6	●	●	●	●	●	●	●	●	●	●
MXP8	●	●	●	●	●	●	●	●	●	●
MXP10	●	●	●	●	●	●	●	●	●	●
MXP12	●	●	●	●	●	●	●	●	●	●
MXP16	●	●	●	●	●	●	●	●	●	●

With shock absorber

Twice the allowable kinetic energy of a rubber stopper

Stopping accuracy is stable, because the guide block and the collision part of the shock absorber is a one-piece construction.

MXPJ6

Compact: Height 17 x Width 20

Compact shape is realised by the cylinder built into the linear guide block. Material of body and table is martensitic stainless steel.

Highly flexible piping methods

Piping possible in two directions: vertical or lateral.

Series MXP Model Selection

Model Selection Steps	Formula/Data	Selection Example
1 Operating Conditions Enumerate the operating conditions considering the mounting position and workpiece configuration.	<ul style="list-style-type: none"> • Model to be used • Mounting orientation • Average speed V_a (mm/s) • Load weight W (kg): Fig. (1) • Overhang L_n (mm): Fig. (2) 	 <p>Cylinder: MXP10-10 Mounting: Horizontal wall mounting</p> <p>Average speed: $V_a = 300$ [mm/s] Allowable load: $W = 0.2$ [kg] $L_2 = 20$ mm $L_3 = 30$ mm</p>
2 Kinetic Energy Find the kinetic energy E (J) of the load. Confirm that the kinetic energy of the load does not exceed the allowable kinetic energy.	$E = \frac{1}{2} \cdot W \left(\frac{V}{1000} \right)^2$ <p>Collision speed $V = 1.4 \cdot V_a$ * Correction factor</p> <p>Kinetic energy (E) < Allowable kinetic energy (E_{max}) Allowable kinetic energy E_{max}: Table (1)</p>	$E = \frac{1}{2} \cdot 0.2 \left(\frac{420}{1000} \right)^2 = 0.018$ $V = 1.4 \times 300 = 420$ <p>Possible to use by $E = 0.018 < E_{max} = 0.045$</p>
3 Load Factor		
3-1 Load Factor of Load Weight Find the allowable load weight W_a (kg). Note) No need to consider this load factor in the case of using perpendicularly in a vertical position. (Define $\alpha_1 = 0$.) Find the load factor of the load weight α_1 .	$W_a = \beta \cdot W_{max}$ <p>Allowable load weight coefficient β: Graph (1) Max. allowable load weight W_{max}: Table (2)</p> $\alpha_1 = W/W_a$	$W_a = 1 \times 1.2 = 1.2$ $\beta = 1$ $W_{max} = 1.2$ $\alpha_1 = 0.2/1.2 = 0.17$
3-2 Load Factor of Static Moment Find the static moment M (N·m). Find the allowable static moment M_a (N·m). Find the load factor α_2 of the static moment.	$M = W \times 9.8 (L_n + A_n)/1000$ <p>Moment centre position distance compensation amount A_n: Table (3)</p> $M_a = \gamma \cdot M_{max}$ <p>Allowable moment coefficient γ: Graph (2) Maximum allowable moment M_{max}: Table (4)</p> $\alpha_2 = M/M_a$	<p>Examine M_r. [As M_p and M_y does not arise, examination is not needed.]</p> $M_r = 0.2 \times 9.8 (20 + 6.8)/1000 = 0.053$ $A_2 = 6.8$ $M_{ar} = 1 \times 4.2 = 4.2$ $\gamma = 1$ $M_{rmax} = 4.2$ $\alpha_2 = 0.053/4.2 = 0.013$
3-3 Load Factor of Dynamic Moment Find the dynamic moment M_e (N·m). Find the allowable dynamic moment M_{ea} (N·m). Find the load factor α_3 of the dynamic moment.	$M_e = 1/3 \cdot W_e \times 9.8 \frac{(L_n + A_n)}{1000}$ <p>Load equivalent to collision $W_e = \delta \cdot W \cdot V$ δ: Damper coefficient Rubber stopper = 4/100 Shock absorber = 1/100 Metal stopper = 16/100 Corrected value for moment centre position distance A_n: Table (3)</p> $M_{ea} = \gamma \cdot M_{max}$ <p>Allowable moment coefficient γ: Graph (2) Max. allowable moment M_{max}: Table (4)</p> $\alpha_3 = M_e/M_{ea}$	<p>Examine M_{ep}.</p> $M_{ep} = 1/3 \times 3.36 \times 9.8 \times \frac{(20 + 6.8)}{1000} = 0.29$ $W_e = 4/100 \times 0.2 \times 420 = 3.36$ $A_2 = 6.8$ $M_{eap} = 0.7 \times 1.7 = 1.19$ $\gamma = 0.7$ $M_{pmax} = 1.7$ $\alpha_3 = 0.29/1.19 = 0.24$ <p>Examine M_{ey}.</p> $M_{ey} = 1/3 \times 3.36 \times 9.8 \times \frac{(30 + 10.5)}{1000} = 0.44$ $W_e = 33.6$ $A_1 = 10.5$ $M_{eay} = 1.19$ (Same as M_{eap}) $\alpha_3 = 0.44/1.19 = 0.37$
3-4 Sum of the Load Factors Use is possible if the sum of the load factors does not exceed 1.	$\alpha_1 + \alpha_2 + \alpha_3 < 1$	<p>Can be used based on</p> $\alpha_1 + \alpha_2 + \alpha_3 + \alpha_3' = 0.17 + 0.013 + 0.24 + 0.37 = 0.79 < 1$

Fig. (1) Load Weight: W (kg)

Note) No need to consider this load factor in the case of using perpendicularly in a vertical position.

Fig. (2) Overhang: Ln (mm), Correction Values for Moment Centre Distance: An (mm)

Note) Static moment: Moment by gravity Dynamic moment: Moment by stopper collision

Table (1) Allowable Kinetic Energy: Emax (J)

Precision Air Slide Table

Series MXP

∅6, ∅8, ∅10, ∅12, ∅16

How to Order

Precision Air Slide Table **MXP 12-15-□-□-M9N S**

Bore size/Standard stroke (mm)

6	5, 10
8	10, 20
10	10, 20
12	15, 25
16	20, 30

Adjuster option

Symbol	Adjuster option
-	Rubber stopper
B	Shock absorber
C	Metal stopper

Number of auto switches

-	2 pcs.
S	1 pc.
n	"n" pcs.

* In the case of MXP6-5, with 2 auto switches are available for D-M9□ type and D-M9□V type only. For other switches, no other choice is affordable but with 1 piece attached (symbol: S).

Auto switch

-	Without auto switch
---	---------------------

* For the applicable auto switch model, refer to the table below.

Magnet/Switch rail

-	With magnet and rail
N	Without magnet and rail

* Auto switch cannot be mounted on type N (without magnet and rail).

Note 1) Adjuster for Series MXP6 is available for one side only.
Note 2) Shock absorber is not available in Series MXP6 and MXP8.
Note 3) Stroke adjusting screw of metal stopper uses stainless steel 304.
 For heat treated specifications, refer to "Made to Order Specifications".

Applicable Auto Switch/Refer to page 21 for further information on auto switches.

Type	Special function	Electrical entry	Indicator light	Wiring (Output)	Load voltage			Auto switch model		Lead wire length* (m)			Pre-wired connector	Applicable load	
					DC	AC	Perpendicular	In-line	0.5 (Nil)	3 (L)	5 (Z)	IC circuit		Relay, PLC	
Reed switch	—	Grommet	Yes	3-wire (NPN equivalent)	—	5 V	—	A96V	A96	●	●	—	—	IC circuit	—
				2-wire	24 V	12 V	100 V	A93V	A93	●	●	—	—	—	Relay, PLC

				3-wire (NPN)				M9NWV	M9NW	●	●	○	○	IC circuit	
				3-wire (PNP)				M9PWV	M9PW	●	●	○	○	IC circuit	
				2-wire				M9BWV	M9BW	●	●	○	○	—	

* Lead wire length symbols: 0.5 m..... Nil (Example) M9N
 3 m..... L (Example) M9NL
 5 m..... Z (Example) M9NZ

* Solid state switches marked with "○" are produced upon receipt of order.

- Since there are other applicable auto switches than listed, refer to page 18 for details.
- For details about auto switches with pre-wired connector, refer to Best Pneumatics.

MXPJ6 Precision Air Slide Table ∅6

How to Order

Air Slide Table MXPJ6-10

Standard stroke

5	5 mm
10	10 mm

* MPXJ6 with auto switch is not available.

Specifications

Bore size (mm)	6
Piping port size	M3
Fluid	Air
Action	Double acting
Operating pressure	0.15 to 0.7 MPa
Proof pressure	1.05 MPa
Ambient and fluid temperature	-10 to 60°C
Piston speed	50 to 500 mm/s
Cushion	Rubber bumper
Lubrication	Non-lube
Stroke length tolerance	+1 0 mm

Theoretical Output

Mounting of Auto Switch

⚠ Caution

Auto Switch Mounting Tool

- Use the watchmakers' screwdriver with a handle diameter 5 to 6 mm when tightening the set screw (attached to auto switch).

Tightening Torque

- Use a tightening torque of approximately 0.05 to 0.1 N·m. As a guide, it can be tightened about 90° past the position at which tightening can be felt.

Other than the models listed in "How to Order", the following auto switches are applicable. For detailed specifications, refer to Best Pneumatics.

Type	Model	Electrical entry (Fetching direction)	Features
Reed switch	D-A90	Grommet (In-line)	Without indicator light
	D-A90V	Grommet (Perpendicular)	

* Normally closed (NC = b contact), solid state switch (D-F9G/F9H type) are also available. For details, refer to Best Pneumatics.

Series MXP

Auto Switch Specifications

Auto Switch Common Specifications

Type	Reed switch	Solid state switch
Leakage current	None	3-wire: 100 μ A or less 2-wire: 0.8 mA or less
Operating time	1.2 ms	1 ms or less
Impact resistance	300 m/s ²	1000 m/s ²
Insulation resistance	50 M Ω or more at 500 VDC Mega (between lead wire and case)	
Withstand voltage	1000 VAC for 1 minute (between lead wire and case)	
Ambient temperature	-10 to 60°C	
Enclosure	IEC529 standard IP67, JIS C 0920 watertight construction	

Lead Wire Length

Lead wire length indication

(Example) D-M9P **L**

Lead wire length

Nil	0.5 m
L	3 m
Z	5 m

Note 1) Applicable auto switch with 5 m lead wire "Z"

Reed switch: None

Solid state switch: Manufactured upon receipt of order as standard.

Note 2) To designate solid state switches with flexible specifications, add "-61" after the lead wire length.

* Oilproof flexible heavy-duty cord is used for D-M9□ as standard. There is no need to suffix -61 to the end of part number.

(Example) D-M9PWVL-**61**

Flexible specification

Auto Switch Hysteresis

The hysteresis is the difference between the position of the auto switch as it turns "on" and as it turns "off". A part of operating range (one side) includes this hysteresis.

Contact Protection Box: CD-P11, CD-P12

<Applicable switch model>

D-A9•A9□V

The auto switches above do not have a built-in contact protection circuit. Therefore, please use a contact protection box with the switch for any of the following cases:

- ① Where the operation load is an inductive load.
- ② Where the wiring length to load is greater than 5 m.
- ③ Where the load voltage is 100 VAC.

The contact life may be shortened. (Due to permanent energising conditions.)

Specifications

Part No.	CD-P11		CD-P12
Load voltage	100 VAC	200 VAC	24 VDC
Maximum load current	25 mA	12.5 mA	50 mA

* Lead wire length — Switch connection side 0.5 m
Load connection side 0.5 m

Internal Circuit

Dimension

Connection

To connect a switch unit to a contact protection box, connect the lead wire from the side of the contact protection box marked SWITCH to the lead wire coming out of the switch unit. Keep the switch as close as possible to the contact protection box, with a lead wire length of no more than 1 metre.

Auto Switch Connections and Examples

Basic Wiring

Solid state 3-wire, NPN

Solid state 3-wire, PNP

2-wire (Solid state switch)

2-wire (Reed switch)

(Power supplies for switch and load are separate.)

Example of Connection to PLC (Programmable Logic Controller)

• Sink input specifications 3-wire, NPN

• Source input specifications 3-wire, PNP

Connect according to the applicable PLC input specifications, as the connection method will vary depending on the PLC input specifications.

2-wire

2-wire

Connection Example for AND (Serial) and OR (Parallel)

• 3-wire

AND connection for NPN output (using relays)

AND connection for NPN output (performed with switches only)

The indicator lights will light up when both switches are turned ON.

OR connection for NPN output

2-wire with 2-switch AND connection

$$\begin{aligned} \text{Load voltage at ON} &= \text{Power supply voltage} - \text{Internal voltage drop} \times 2 \text{ pcs.} \\ &= 24 \text{ V} - 4 \text{ V} \times 2 \text{ pcs.} \\ &= 16 \text{ V} \end{aligned}$$

Example: Power supply is 24 VDC.
Internal voltage drop in switch is 4 V.

2-wire with 2-switch OR connection

$$\begin{aligned} \text{Load voltage at OFF} &= \text{Leakage current} \times 2 \text{ pcs.} \\ &\quad \times \text{Load impedance} \\ &= 1 \text{ mA} \times 2 \text{ pcs.} \times 3 \text{ k}\Omega \\ &= 6 \text{ V} \end{aligned}$$

Example: Load impedance is 3 kΩ.
Leakage current from switch is 1 mA.

(Reed switch) Because there is no current leakage, the load voltage will not increase when turned OFF. However, depending on the number of switches in the ON state, the indicator lights may sometimes dim or not light because of the dispersion and reduction of the current flowing to the switches.

Reed Switch: Direct Mounting Style

D-A90(V)/D-A93(V)/D-A96(V)

Grommet Electrical entry : In-line

⚠ Caution

Operating Precautions

Fix the switch with the existing screw installed on the switch body. The switch may be damaged if a screw other than the one supplied, is used.

Auto Switch Internal Circuit

D-A90(V)

D-A93(V)

D-A96(V)

- Note) ① In a case where the operation load is an inductive load.
 ② In a case where the wiring load is greater than 5 m.
 ③ In a case where the load voltage is 100 VAC.

Please use the auto switch with a contact protection box any of the above mentioned cases. (For details about the contact protection box, refer to page 19.)

Made to Order Specifications

Made-to-Order Application Chart

Made-to-order contents		MXPJ6	MXP6	MXP8	MXP10	MXP12	MXP16	Note
① Anti-rust guide	X42	●	●	●	●	●	●	
② Heat treated metal stopper bolt	X16		●	●	●	●	●	Metal stopper only
③ Axial piping port set screw	X23	●	●	●	●	●	●	
④ Long adjustment nut	X51			●	●	●	●	Except with shock absorber

1 Anti-rust Guide Specification Symbol -X42

Martensitic stainless steel is used for the body, table and guide block, but if greater rust prevention is required use this specification. The body, table and guide block undergo an anti-rust treatment.

Specifications

Model	Anti-rust type
Bore size (mm)	6, 8, 10, 12, 16
Fluid	Air
Surface treatment	Special anti-rust treatment ^{Note 2)}

- Note 1) Dimensions are the same as the standard type.
 Note 2) The body, table and guide block are black due to the special anti-rust treatment.

2 Heat Treated Metal Stopper Bolt Specification Symbol -X16

To reduce wear on the metal stopper, heat treated chrome molybdenum steel (SCM435) is used for the stroke adjustment screw.

Specifications

Bore size (mm)	6	8, 10, 12	16
Fluid	Air		
Speed range	50 to 200 mm/S		
Cushion	None		
Stroke adjustment	One side only 0 to 5 mm	One side only 0 to 5 mm	One side only 0 to 4 mm

 Construction/Dimensions (Dimensions are the same as standard. Refer to pages 10 to 17.)

Series MXP

3 Axial Piping Port Set Screw Specification -X23

MXP Standard part no. → Indicate model on page 3 — X23

MXPJ6 Standard part no. → Indicate model on page 3 — X23

● Axial piping port set screw specification

The axial piping port plug (M-3P, M-5P) is changed to a hexagon socket head set screw, and the overall length is shortened.

Note: The hexagon socket head screw is secured with an anaerobic adhesive and cannot be removed.

Dimensions

MXPJ6

MXP6

MXP8,10,12,16

4 Long Adjustment Nut Specification -X51

MXP Standard part no. → Indicate model on page 3 — X51

● Long adjustment nut specification

The overall length of the adjustment nut is increased to allow stroke adjustment work from any direction.

Dimensions

Series MXP

Safety Instructions

The following safety instructions are intended to prevent a hazardous situation and/or equipment damage. The instructions indicate the level of potential hazard by labels of "**Caution**", "**Warning**" or "**Danger**". To ensure safety, please observe all safety practices, including ISO 4414 ^{Note 1)} and JIS B 8370 ^{Note 2)}.

 **Caution** : Operator error could result in injury or equipment damage.

 **Warning** : Operator error could result in serious injury or loss of life.

 **Danger** : In extreme conditions, there is a possible result of serious injury or loss of life.

Note 1) ISO 4414: Pneumatic fluid power--General rules relating to systems.

Note 2) JIS B 8370: General Rules for Pneumatic Equipment

Warning

1. The compatibility of pneumatic equipment is the responsibility of the person who designs the pneumatic system or decides its specifications.

Since the products specified here are used in various operating conditions, their compatibility with a specific pneumatic system must be based on specifications, post analysis and/or tests to meet a specific requirement. The expected performance and safety assurance is the responsibility of the person who determines the compatibility of the system. This person should continuously review the suitability of all specified items by referring to the latest information in the catalogue and by taking into consideration the possibility of equipment failure when configuring the system.

2. Only trained personnel should operate pneumatically operated machinery and equipment.

Compressed air can be dangerous if an operator is unfamiliar with it. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced operators.

3. Do not service machinery/equipment or attempt to remove components until safety is confirmed.

1. Inspection and maintenance of machinery/equipment should only be performed once measures to prevent falling or runaway of the driver objects have been confirmed.
2. When equipment is to be removed, confirm the all safety precautions have been followed. Cut the supply pressure for this equipment and exhaust all residual compressed air in the system.
3. Before restarting any machinery/equipment, exercise caution to prevent quick extension of a cylinder piston rod, etc.

4. Contact SMC if the product is to be used in any of the following conditions:

1. Conditions and environments beyond the given specifications, or if product is used outdoors.
2. Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, clutch and brake circuits in press applications, or safety equipment.
3. An application which has the possibility of having a negative effect on people, property, or animals, requiring special safety analysis.

Series MXP Actuator Precautions 1

Be sure to read before handling.

Caution on Design

⚠ Warning

- 1. There is a possibility of dangerous sudden action by air cylinders if sliding parts of machinery are twisted due to external forces, etc.**

In such cases, human injury may occur; e.g., by catching hands or feet in the machinery, or damage to the machinery itself may occur. Therefore, the machine should be adjusted to operate smoothly and designed to avoid such dangers.

- 2. A protective cover is recommended to minimize the risk of personal injury.**

If a stationary object and moving parts of a cylinder are in close proximity, personal injury may occur. Design the structure to avoid contact with the human body.

- 3. Securely tighten all stationary parts and connected parts so that they will not become loose.**

Especially when a cylinder operates with high frequency or is installed where there is a lot of vibration, ensure that all parts remain secure.

- 4. A deceleration circuit or shock absorber may be required.**

When a driven object is operated at high speed or the load is heavy, a cylinder's cushion will not be sufficient to absorb the impact. Install a deceleration circuit to reduce the speed before cushioning, or install an external shock absorber to relieve the impact. In this case, the rigidity of the machinery should also be examined.

- 5. Consider a possible drop in circuit pressure due to a power outage, etc.**

When a cylinder is used in a clamping mechanism, there is a danger of workpieces dropping if there is a decrease in clamping force due to a drop in circuit pressure caused by a power outage, etc. Therefore, safety equipment should be installed to prevent damage to machinery and human injury. Suspension mechanisms and lifting devices also require consideration for drop prevention.

- 6. Consider a possible loss of power source.**

Measures should be taken to protect against bodily injury and equipment damage in the event that there is a loss of power to equipment controlled by pneumatics, electricity, or hydraulics.

- 7. Design circuitry to prevent sudden lurching of driven objects.**

When a cylinder is driven by an exhaust centre type directional control valve or when starting up after residual pressure is exhausted from the circuit, etc., the piston and its driven object will lurch at high speed if pressure is applied to one side of the cylinder because of the absence of air pressure inside the cylinder. Therefore, equipment should be selected and circuits designed to prevent sudden lurching, because there is a danger of human injury and/or damage to equipment when this occurs.

- 8. Consider emergency stops.**

Design so that human injury and/or damage to machinery and equipment will not be caused when machinery is stopped by a safety device under abnormal conditions, a power outage or a manual emergency stop.

- 9. Consider the action when operation is restarted after an emergency stop or abnormal stop.**

Design the machinery so that human injury or equipment damage will not occur upon restart of operation.

When the cylinder has to be reset at the starting position, install manual safety equipment.

Selection

⚠ Warning

- 1. Confirm the specifications.**

The products featured in this catalogue are designed for use in industrial compressed air systems. If the products are used in conditions where pressure and/or temperature are outside the range of specifications, damage and/or malfunctions may occur. Do not use in these conditions. (Refer to the specifications.)

Consult with SMC if you use a fluid other than compressed air.

- 2. Intermediate stop**

In the case of 3 position closed centre of a valve, it is difficult to make a piston stop at the required position as accurately and precisely as with hydraulic pressure due to compressibility of air.

Furthermore, since valves and cylinders, etc. are not guaranteed for zero air leakage, it may not be possible to hold a stopped position for an extended period of time. Contact SMC in the case it is necessary to hold a stopped position for an extended period.

⚠ Caution

- 1. Operate within the limits of the maximum usable stroke.**

The piston rod will be damaged if operated beyond the maximum stroke. Refer to the air cylinder model selection procedure for the maximum usable stroke.

- 2. Operate the piston within a range such that collision damage will not occur at the stroke end.**

- 3. Use a speed controller to adjust the cylinder drive speed, gradually increasing from a low speed to the desired speed setting.**

Mounting

⚠ Caution

- 1. Be certain to match the rod shaft centre with the direction of the load and movement when connecting.**

When not properly matched, problems may arise with the rod and tube, and damage may be caused due to friction on areas such as the inner tube surface, bushings, rod surface and seals.

- 2. When an external guide is used, connect the rod end and the load in such a way that there is no interference at any point within the stroke.**

- 3. Do not scratch or gouge the sliding parts of the cylinder tube or tube rod, etc., by striking or grasping them with other objects.**

Cylinder bores are manufactured to precise tolerances, so that even a slight deformation may cause malfunction. Also, scratches or gouges, etc., in the tube rod may lead to damaged seals and cause air leakage.

- 4. Prevent the seizure of rotating parts.**

Prevent the seizure of rotating parts (pins, etc.) by applying grease.

Series MXP Actuator Precautions 2

Be sure to read before handling.

Mounting

⚠ Caution

5. Do not use until you verify that the equipment can operate properly.

After mounting, repairs, or modification, etc., connect the air supply and electric power, and then confirm proper mounting by means of appropriate function and leak tests.

6. Instruction manual

Install the products and operate them only after reading the instruction manual carefully and understanding its contents. Also keep the manual where it can be referred to as neces-

Piping

⚠ Caution

1. Preparation before piping

Before piping is connected, it should be thoroughly blown out with air (flushing) or washed to remove chips, cutting oil and other debris from inside the pipe.

2. Wrapping of pipe tape

When screwing in pipes and fittings, etc., be certain that chips from the pipe threads and sealing material will not ingress inside the piping.

Also, when pipe tape is used, leave 1.5 to 2 thread ridges exposed at the end of the threads.

Lubrication

⚠ Caution

1. Lubrication of non-lube type cylinder

The cylinder has been lubricated at the factory and can be used without any further lubrication.

However, in the event that it is lubricated additionally, be sure to use Class 1 turbine oil (with no additive) ISO VG32.

Stopping lubrication later may lead to malfunctions because the new lubricant will cancel out the original lubricant. Therefore, lubrication must be continued once it has been started.

Air Supply

⚠ Warning

1. Use clean air.

Do not use compressed air which contains chemicals, synthetic oils containing organic solvents, salts or corrosive gases, etc., as this can cause damage or malfunction.

Air Supply

⚠ Caution

1. Install air filters.

Install air filters close to valves at their upstream side. A filtration degree of 5 μm or less should be selected.

2. Install an aftercooler, air dryer, or water separator (Drain Catch).

Air that includes excessive drainage may cause malfunction of valves and other pneumatic equipment. To prevent this, install an air dryer, aftercooler or water separator, etc.

3. Use the product within the specified range of fluid and ambient temperature.

Take measures to prevent freezing when below 5°C, since moisture in circuits can freeze and cause damage to seals and lead to malfunctions.

For compressed air quality, refer to "Air Preparation Equipment" catalogue.

Operating Environment

⚠ Warning

1. Do not use in atmospheres or locations where corrosion hazards exist.

2. In dusty locations or where water or oil, etc., splash on the equipment, take suitable measures to protect the rod.

3. When using auto switches, do not operate in an environment with strong magnetic fields.

Maintenance

⚠ Warning

1. Perform maintenance procedures as shown in the instruction manual.

If it is handled improperly, malfunction or damage of machinery or equipment may occur.

2. Removal of equipment, and supply/exhaust of compressed air

Before any machinery or equipment is removed, first ensure that the appropriate measures are in place to prevent the fall or erratic movement of driven objects and equipment, then cut off the electric power and reduce the pressure in the system to zero. Only then should you proceed with the removal of any machinery and equipment.

When machinery is restarted, proceed with caution after confirming that appropriate measures are in place to prevent cylinders from sudden movement.

⚠ Caution

1. Drain flushing

Remove drainage from air filters regularly. (Refer to the specifications.)

Series MXP Auto Switch Precautions 1

Be sure to read before handling.

Design and Selection

Warning

1. Confirm the specifications.

Read the specifications carefully and use this product appropriately. The product may be damaged or malfunction if it is used outside of its specification range (eg. current load, voltage, temperature or impact, etc.).

2. Take precautions when multiple actuators are used close together.

When two or more actuators are lined up in close proximity to each other, magnetic field interference may cause the switches to malfunction. Maintain a minimum cylinder separation of 40 mm.

3. Pay attention to the length of time that a switch is on at an intermediate stroke position.

When an auto switch is placed at an intermediate position of the stroke and a load connected to the auto switch is driven at the time the slide table passes, the auto switch will operate. However if the speed is too great, the operating time will be shortened and the load may not operate properly. The maximum detectable piston speed is:

$$V \text{ (mm/s)} = \frac{\text{Auto switch operating range (mm)}}{\text{Load operating time (ms)}} \times 1000$$

4. Keep wiring as short as possible.

<Reed switch>

As the length of the wiring to a load gets longer, the rush current at the time the switch is turned ON becomes greater, which may shorten the product's life. (The switch will stay ON all the time.)

- 1) Use a contact protection box when the wire length is 5 m or longer.

<Solid state switch>

- 2) Although the wire length should not affect switch function, use a wire that is 100 m or shorter.

5. Take precautions for the internal voltage drop of the switch.

<Reed switch>

- 1) Switches with an indicator light (Except D-A96, A96V)

- If auto switches are connected in series as shown below, take note that there will be a large voltage drop because of internal resistance from the light emitting diodes. (Refer to internal voltage drop in the auto switch specifications.) [The voltage drop will be "n" times larger when "n" auto switches are connected.]

Even though an auto switch operates normally, the load may not operate.

- Similarly, when operating below a specified voltage, it is possible that the load may be ineffective even though the auto switch function is normal. Therefore, the formula below should be satisfied after confirming the minimum operating voltage of the load.

$$\text{Supply voltage} - \text{Internal voltage drop of switch} > \text{Minimum operating voltage of load}$$

- 2) If the internal resistance of a light emitting diode causes a problem, select a switch without an indicator light (Model A90, A90V).

<Solid state switch>

- 3) Generally, the internal voltage drop will be greater with a 2-wire solid state auto switch than with a reed switch. Take the same precautions as in item (1) as mentioned above. Also, note that a 12 VDC relay is not applicable.

6. Pay attention to leakage current.

<Solid state switch>

With a 2-wire solid state auto switch, current (leakage current) flows to the load to operate the internal circuit even when in the OFF state.

$$\text{Current to operate load (Input OFF signal of controller)} > \text{Leakage current}$$

If the condition given in the above formula is not met, internal circuit will not reset correctly (stays ON). Use a 3-wire switch if this specification cannot be satisfied.

Moreover, leakage current flow to the load will be "n" times larger when "n" auto switches are connected in parallel.

7. Do not use a load that generates surge voltage.

<Reed switch>

If driving a load such as a relay which generates a surge voltage, use a contact protection box.

<Solid state switch>

Although a zener diode for surge protection is connected at the output side of a solid state auto switch, damage may still occur if a surge is applied repeatedly. When directly driving a load which generates a surge, such as a relay or solenoid valve, use a switch with a built-in surge absorbing element.

8. Cautions for use in an interlock circuit

When an auto switch is used for an interlock signal requiring high reliability, device a double interlock system to safeguard against malfunctions. The double interlock system should provide a mechanical protection function or use another switch (sensor) together with the auto switch. Also perform periodic inspection and confirm proper operation.

9. Ensure sufficient clearance for maintenance activities.

When designing an application, be sure to allow sufficient clearance for maintenance and inspections.

Series MXP

Auto Switch Precautions 2

Be sure to read before handling.

Mounting and Adjustment

⚠ Warning

1. Do not drop or bump.

Do not drop, bump or apply excessive impacts (300m/s² or greater for reed switches and 1000m/s² or greater for solid state switches) while handling.

Although the body of the switch may not be damaged, the inside of the switch could be damaged and cause a malfunction.

2. Do not carry an actuator by the auto switch lead wires.

Never carry a cylinder by its lead wires. This may not only cause broken lead wires, but it may cause internal elements of the switch to be damaged by the stress.

3. Mount switches using the proper tightening torque.

When a switch is tightened above the torque specification, the mounting screws, or switch may be damaged. On the other hand, tightening below the torque specification may allow the switch to slip out of position.

4. Mount a switch at the centre of the operating range.

Adjust the mounting position of an auto switch so that the piston stops at the centre of the operating range (the range in which a switch is ON). (The mounting positions shown in the catalogue indicate the optimum position at the stroke end.) If mounted at the end of the operating range (around the borderline of ON and OFF), operation will be unstable.

<D-M9□>

When the D-M9 auto switch is used to replace old series auto switch, it may not activate depending on operating condition because of its shorter operating range.

Such as

- Application where the stop position of actuator may vary and exceed the operating range of the auto switch, for example, pushing, pressing, clamping operation, etc.
- Application where the auto switch is used for detecting an intermediate stop position of the actuator. (In this case the detecting time will be reduced.)

In these applications, please set the auto switch to the centre of the required detecting range.

⚠ Caution

1. Fix the switch with the appropriate screw installed on the switch body. The switch may be damaged if other screws are used.

Wiring

⚠ Warning

1. Avoid repeatedly bending or stretching lead wires.

Broken lead wires will result from repeatedly applying bending stress or stretching force to the lead wires.

2. Be sure to connect the load before power is applied.

<2-wire type>

If the power is turned ON when an auto switch is not connected to a load, the switch will be instantly damaged because of excess current.

Wiring

3. Confirm proper insulation of wiring.

Be certain that there is no faulty wiring insulation (such as contact with other circuits, ground fault, improper insulation between terminals, etc.). Damage may occur due to excess current flow into a switch.

4. Do not wire in conjunction with power lines or high voltage lines.

Wire separately from power lines or high voltage lines, avoiding parallel wiring or wiring in the same conduit with these lines. Control circuits containing auto switches may malfunction due to noise from these lines.

5. Do not allow short circuit of loads.

<Reed switch>

If the power is turned ON with a load in a short circuited condition, the switch will be instantly damaged because of excess current flow into the switch.

<Solid state switch>

D-M9□ and all models of PNP output type switches do not have built-in short circuit protection circuits. If loads are short circuited, the switches will be instantly damaged, as in the case of reed switches.

Take special care to avoid reverse wiring with the brown [red] power supply line and the black [white] output line on 3-wire type switches.

6. Avoid incorrect wiring.

<Reed switch>

A 24 VDC switch with indicator light has polarity. The brown [red] lead wire is (+), and the blue [black] lead wire is (-).

1) If connections are reversed, the switch will still operate, but the light emitting diode will not light up.

Also note that a current greater than the maximum specified one will damage a light emitting diode and make it inoperable.

Applicable models: D-A93, A93V

<Solid state switch>

1) Even if connections are reversed on a 2-wire type switch, the switch will not be damaged because it is protected by a protection circuit, but it will remain in a normally ON state. But reverse wiring in a short circuit load condition should be avoided to protect the switch from being damaged.

2) Even if (+) and (-) power supply line connections are reversed on a 3-wire type switch, the switch will be protected by a protection circuit. However, if the (+) power supply line is connected to the blue [black] wire and the (-) power supply line is connected to the black [white] wire, the switch will be damaged.

<D-M9□>

D-M9□ does not have built-in short circuit protection circuit. Be aware that if the power supply connection is reversed (e.g. (+) power supply wire and (-) power supply wire connection is reversed), the switch will be damaged.

* Lead wire colour changes

Lead wire colours of SMC switches have been changed in order to meet NECA Standard 0402 for production beginning September, 1996 and thereafter. Please refer to the tables provided.

Special care should be taken regarding wire polarity during the time that the old colours still coexist with the new colours.

2-wire

	Old	New
Output (+)	Red	Brown
Output (-)	Black	Blue

3-wire

	Old	New
Power supply	Red	Brown
GND	Black	Blue
Output	White	Black

Series MXP Auto Switch Precautions 3

Be sure to read before handling.

Wiring

⚠ Caution

1. When the cable sheath is stripped, confirm the stripping direction. The insulator may be split or damaged depending on the direction. (D-M9□ only)

Recommended tool

Manufacturer	Model name	Model no.
VESSEL	Wire stripper	No 3000G
TOKYO IDEAL CO., LTD	Strip master	45-089

* Stripper for a round cable (ø2.0) can be used for a 2-wire type cable.

Operating Environment

⚠ Warning

1. **Never use in an atmosphere of explosive gases.**
The construction of the auto switch is not intended to prevent explosion. Never use in an atmosphere with an explosive gas since this may cause a serious explosion.
2. **Do not use in an area where a magnetic field is generated.**
The auto switch will malfunction or the magnets inside of an actuator will become demagnetised if used in such an environment.
3. **Do not use in an environment where the auto switch will be continually exposed to water.**
The switch satisfies the IEC standard IP67 construction (JIS C 0920: watertight construction). Nevertheless, it should not be used in applications where it is continually exposed to water splash or spray. This may cause deterioration of the insulation or swelling of the potting resin inside switch causing a malfunction.
4. **Do not use in an environment with oil or chemicals.**
Consult with SMC if the auto switch will be used in an environment laden with coolant, cleaning solvent, various oils or chemicals. If the auto switch is used under these conditions for even a short time, it may be adversely effected by a deterioration of the insulation, a malfunction due to swelling of the potting resin, or hardening of the lead wires.
5. **Do not use in an environment with temperature cycles.**
Consult with SMC if the switch is used where there are temperature cycles other than normal temperature changes, as they may adversely affected the switch internally.

Operating Environment

6. **Do not use in an environment where there is excessive impact shock.**

<Reed switch>

When excessive impact (300 m/s² or more) is applied to a reed switch during operation, the contact point may malfunction and generate a signal momentarily (1 ms or less) or cut off. Consult with SMC regarding the need to use a solid state switch in a specific environment.

7. **Do not use in an area where surges are generated.**

<Solid state switch>

When there are units (such as solenoid type lifters, high frequency induction furnaces, motors, etc.) that generate a large amount of surge in the area around an actuator with a solid state auto switch, their proximity or pressure may cause deterioration or damage to the internal circuit of the switch. Avoid sources of surge generation and disorganised lines.

8. **Avoid accumulation of iron waste or close contact with magnetic substances.**

When a large amount of iron waste such as machining chips or spatter is accumulated, or a magnetic substance (something attracted by a magnet) is brought into close proximity with an auto switch cylinder, it may cause the auto switch to malfunction due to a loss of the magnetic force inside the cylinder.

Maintenance

⚠ Warning

1. **Perform the following maintenance periodically in order to prevent possible danger due to unexpected auto switch malfunction.**
 - 1) Securely tighten switch mounting screws.
If screws become loose or the mounting position is dislocated, retighten them after readjusting the mounting position.
 - 2) Confirm that there is no damage to the lead wires.
To prevent faulty insulation, replace switches or repair lead wires, etc., if damage is discovered.
 - 3) Confirm that the green light on the 2-colour display type switch lights up.
Confirm that the green LED is ON when stopped at the set position. If the red LED is ON, when stopped at the set position, the mounting position is not appropriate. Readjust the mounting position until the green LED lights up.

Other

⚠ Warning

1. **Consult with SMC concerning water resistance, elasticity of lead wires, usage at welding sites, etc.**

Selection

⚠ Caution

1. Use a load within a range that does not exceed the operating limit.

Select models based on the maximum load weight and the allowable moment. Refer to model selection on pages 1 and 2 for detailed methods. If operated beyond the operating limit, the eccentric load applied to the guide section will be excessive. This can have an adverse effect on service life due to vibration in the guide unit and loss of accuracy, etc.

2. When performing intermediate stops with an external stopper, employ measures to prevent lurching.

If lurching occurs damage can result. When making a stop with an external stopper to be followed by continued forward movement, first supply pressure to momentarily reverse the table, then retract the intermediate stopper, and finally apply pressure to the opposite port to operate the table again.

3. Do not operate in such a way that excessive external forces or impact forces are applied to the product.

This can cause damage.

Mounting

⚠ Caution

1. Do not scratch or gouge the mounting surfaces of the body and table (guide block).

This can cause loss of parallelism in the mounting surfaces, vibration of the guide unit and increased operating resistance, etc.

2. Do not scratch or gouge the transfer surfaces of the body and table (guide block).

This can cause vibration and increased operating resistance, etc.

3. Do not apply strong impacts or excessive moment when mounting work pieces.

Application of external forces greater than the allowable moment can cause vibration of the guide unit and increased operating resistance, etc.

4. Ensure that the parallelism of the mounting surface is 0.02 mm or less.

Poor parallelism of the workpiece mounted on the air slide table, the base, and other parts can cause vibration of the guide unit and increased operating resistance, etc.

5. For connection to a load that has an external support or guide mechanism, select an appropriate connection method and perform careful alignment.

Mounting

6. Do not allow objects affected by magnets in close proximity to the air slide table

Since magnets are built into the side of the guide block when equipped with auto switches, do not allow items such as magnetic disks, magnetic cards or magnetic tape close to the air slide table. Data may be erased.

7. Do not attach magnets to the table (guide block) section.

Since the table (guide block) is constructed with a magnetic substance, it becomes magnetised when magnets, etc. are attached to it, and this may cause malfunction of auto switches, etc.

8. When mounting an air slide table, use screws of an appropriate length and tighten them properly at no more than the maximum tightening torque.

Tightening with a torque above the limit can cause malfunction, while insufficient tightening can cause slippage and dropping, etc.

1. Body Tapped

Model	Bolt	Max. tightening torque N·m	Max. screw-in depth (ℓ mm)
MXPJ6	M4 x 0.7	2.1	6
MXP6	M4 x 0.7	2.1	6
MXP8	M4 x 0.7	2.1	4.5
MXP10	M4 x 0.7	2.1	6
MXP12	M5 x 0.8	4.4	5
MXP16	M6 x 1	7.4	8

2. Body Through-hole

Model	Bolt	Max. tightening torque N·m	Body thickness (ℓ mm)
MXPJ6	M3 x 0.5	1.2	6
MXP6	M3 x 0.5	1.2	6
MXP8	M3 x 0.5	1.2	4.5
MXP10	M3 x 0.5	1.2	6
MXP12	M4 x 0.7	2.1	5
MXP16	M5 x 0.8	4.4	8

Series MXP

Specific Product Precautions 2

Be sure to read before handling.

Mounting

⚠ Caution

3. Tapped on Body Side

Model	Bolt	Max. tightening torque N·m	Max. screw-in depth (ℓ mm)
MXP8	M3	1.2	4
MXP10	M3	1.2	5
MXP12	M4	2.1	6
MXP16	M5	4.4	8

1. Top Mounting

Model	Bolt	Max. tightening torque N·m	Max. screw-in depth (ℓ mm)
MXPJ6	M3	1.2	3
MXP6	M3	1.2	3
MXP8	M3	1.2	4
MXP10	M3	1.2	4
MXP12	M4	2.1	4.5
MXP16	M5	4.4	7

⚠ Caution

Since the bolts pass through in the case of MXPJ6 and MXP6, use bolts shorter than the maximum screw-in depth. If long bolts are used, they can touch the body and cause trouble.

2. Side Mounting

Model	Bolt	Max. tightening torque N·m	Max. screw-in depth (ℓ mm)
MXP8	M3	1.2	4
MXP10	M3	1.2	3
MXP12	M3	1.2	4
MXP16	M4	2.1	6

⚠ Caution

Side mounting is not possible when equipped with shock absorber.

Mounting

9. When the positioning pinhole is used for mounting an air slide table, select a positioning pin with an appropriate length.

Model	Pinhole diameter	Pinhole depth	
	∅D	H1mm	H2mm
MXPJ6	2.5 ^{+0.030} ₀	2.5	2
MXP6	2.5 ^{+0.030} ₀	2.5	2
MXP8	3 ^{+0.030} ₀	2.5	1.5
MXP10	3 ^{+0.030} ₀	2.5	1.5
MXP12	3 ^{+0.030} ₀	3	1.5
MXP16	4H9 ^{+0.030} ₀	4	2

Operating Environment

⚠ Caution

1. Do not use in environments where there is direct exposure to liquids such as cutting oil.

Operation in environments where the body is exposed to cutting oil, coolant or oil mist can cause vibration, increased operating resistance and air leakage, etc.

2. Do not use in environments where there is direct exposure to foreign matter such as dust, dirt, chips and spatter.

This can cause vibration, increased operating resistance and air leakage, etc.

Consult with SMC regarding use in this kind of environment.

3. Be careful about the corrosion resistance of the linear guide.

Be careful the rail and guide block use martensitic stainless steel, which is inferior to austenitic stainless steel in terms of corrosion resistance.

Adjuster Option Handling Precautions

With Shock Absorber

⚠ Caution

1. Never turn the screw on the bottom of the shock absorber body.

This is not an adjustment screw. Turning it can cause oil leakage.

2. Do not scratch the sliding surface of the shock absorber's piston rod.

This can cause a loss of durability and return malfunction.

Series MXP

Specific Product Precautions 3

Be sure to read before handling.

Adjuster Option Handling Precautions

⚠ Caution

3. The shock absorber is a consumable part. Replacement is necessary when a drop in energy absorbing capacity is noticed.

Applicable size	Shock absorber model
MXP10	RB0805
MXP12	RB0805
MXP16	RB0806

4. Use the tightening torque in the table below for the shock absorber's lock nut.

Bolt	Tightening torque N·m
MXP10	1.67
MXP12	
MXP16	

Rust may occur specifically in an environment where water drops from condensation adhere to a surface.

5. Provide shade in locations exposed to direct sunlight.

6. Block off sources of heat located near by.

When there are heat sources in the surrounding area, radiated heat may cause the product's temperature to rise and exceed the operating temperature range. Block off the heat with a cover, etc.

7. Do not use in locations where vibration or impact occur.

Consult with SMC regarding use in this kind of environment, as damage and malfunction can result.

Stroke Adjustment

Loosen the lock nut, adjust the stroke with a hexagon wrench from the side marked with an arrow and secure with the lock nut.

⚠ Caution

Urethane Bumper

If not adjusted for effective operation of the urethane bumper, impact will increase and have an adverse effect on service life.

As a guide, adjust so that dimension L₁ is less than the value shown in "Table 1".

Stroke Adjustment

Table 1

Model	L ₁ (mm)
MXP6-5	9 (one side only)
MXP6-10	9 (one side only)
MXP8-10	7
MXP8-20	6
MXP10-10	7
MXP10-20	6
MXP12-15	7
MXP12-25	7
MXP16-20	8
MXP16-30	8

Metal Stopper

In the case of a metal stopper, adjust so that the stroke adjuster hits the end face of the guide block.

As a guide, adjust so that dimension L₂ is less than the value shown in "Table 2".

Table 2

Model	L ₂ (mm)
MXP6-5C	10 (one side only)
MXP6-10C	10 (one side only)
MXP8-10C	9
MXP8-20C	8
MXP10-10C	9
MXP10-20C	8
MXP12-15C	8
MXP12-25C	8
MXP16-20C	8
MXP16-30C	8

Shock Absorber

When equipped with shock absorber, adjust so that the end face of the shock absorber hits the guide block. If the shock absorber does not operate effectively, impact will increase and have an adverse effect on service life. As a guide, adjust so that dimension L₃ is less than the value shown in "Table 3".

Table 3

Model	L ₃ (mm)
MXP10-10B	19
MXP10-20B	15
MXP12-15B	15
MXP12-25B	15
MXP16-20B	15
MXP16-30B	15
