

# RADI8 NETMOSTAT SMART THERMOSTAT

Reliable and fast remote access for any type of electric heating. The Netmostat thermostat fulfils even the strictest quality and usage requirements. Smartphone application available on any Android or iOS device.

The Netmostat has a new built-in WiFi module which makes it super fast.

When designing the controls of the Netmostat, we left out all unnecessary functions and outdated design elements in order to create a new generation of reliable, affordable, and easy-to-use smart

thermostats.

4 optimised operating modes - with nearly 4 years of experience on the market of heating systems, we know that not all systems are the same. This smart thermostat offers custom settings for floor heating, ceiling heating, infrared panels, and traditional electric convectors.

The electric power running through the thermostat also generates heat. The components used in our thermostat do not heat up even with extensive use through industry grade sensors.

# 2<sup>nd</sup> Generation built-in WiFi Thermostat

The thermostat is simple to use increasing the energy efficiency of the heating system. You can save up to 20% on your annual heating bills with the smart thermostat.

**Reliable And Fast As Lightning**  
**User-Friendly UI**

**Keep It Simple**  
**4 Optimised Operating Modes**

**Industry-Grade Sensors**  
**ERP Ready – EU Standard**
