- Low 1" Profile
- High Power Density
- 3" by 5.0" Footprint
- 150 W Convection/ 225 W Force Cooled Ratings
- 5 V Standby and 12 V Fan Outputs
- Medical and ITE Approvals
- High Efficiency, up to 94%
- Less than 0.5 W No Load Input Power

The ECP225-A series is designed to minimize the no load power consumption and maximize efficiency to facilitate equipment design to meet the latest environmental legislation. Approved for medical and ITE applications, this range of single output AC/DC power supplies are packaged in an ultra-low profile 1" height with a foot print of just 3.0" by 5.0". The ECP225-A provides up to 225 W force-cooled or 150 W convection-cooled leading to very high power densities of 15 W/in³ or 10 W/in³ respectively. A 5 V, 2 A standby output and a 12 V, 500 mA fan supply are included in the design. The power supply contains two fuses and low leakage currents as required by medical applications and is safety approved to operate in a 70 °C ambient. The low profile and safety approvals covering ITE and medical standards along with conducted emissions to EN55011/22 level B allow the versatile ECP225-A series to be used in a vast range of applications.

Notes

1. Requires 10 CFM.
2. Measured with 20 MHz bandwidth and 10 µF electrolytic capacitor in parallel with 0.1 µF ceramic capacitor
3. Minimum average efficiencies measured at 25%, 50%, 75% & 100% of 225 W load and 230 VAC input.
4. Typical voltage, actual regulated voltage will be in range of 10.5 V to 11.1 V
5. Regulation of the fan output requires a minimum load of 10 W on the main output.

Thermal Considerations

In order to ensure safe operation of the PSU in the end-use equipment, the temperature of the components listed in the table below must not be exceeded. Temperature should be monitored using K type thermocouples placed on the hottest part of the component (out of direct air flow). See Mechanical Details for component locations.

Temperature Measurements (At Maximum Ambient)	
Component	Max Temperature °C
TR1 Coil	110°C
L1 Coil	120°C
Q1 Body	120°C
C2	105°C
C52	105°C

Service Life

The estimated service life of the ECP225-A is determined by the cooling arrangements and load conditions experienced in the end application. Due to the uncertain nature of the end application this estimated service life is based on the actual measured temperature of a key capacitor with in the product when installed by the end application,

The graph below expresses the estimated lifetime of a given component temperature and assumes continuous operation at this temperature.
