

DUO test rod for pH and nitrite value

For protection and monitoring measures in line with TRGS 611

Application:

These test rods are used to quickly determine nitrite and pH values in coolants. Dip the rods briefly in the sample and then compare it with the colour scale. A reliable result is delivered within one minute. The nitrite test field enables you to test the nitrite concentration in coolant very quickly and easily. Bacterial contamination of the coolant can be recognised at an early stage by the rising nitrite concentration. The pH test field is specially optimised for the requirements of coolant analytics. Precise testing in steps of 0.5 enables changes in pH value to be recognised at an early stage so that countermeasures to be initiated where applicable. This ensures optimum corrosion protection at all times and inhibits bacterial contamination of the coolant.

Execution:

- Plastic rods
- Non-bleeding paper
- Coloured comparison scale
- Suitable for measurements in line with TRGS 611
- pH test field gradation: pH 7-14
- Nitrite test field gradation: 0-25 mg/l

Advantage:

- Quick and easy to read
- Testing the coolant quality saves money
- Enables timely intervention

Art. no.	18300 174
Brand	ARIANA
Manufacturer Part Number	0292061
For determining	Nitrite/pH value
Cooling lubricants test area	0-25 mg/l, 7-14 pH
Gross Weight	0.052 kg
Product Group	147
