Part Number: STR-LOGIC-GATES-EVK

Description: Multi-function Logic Gate with GUI Control

Strata enables seamless evaluation of hardware devices such as this configurable multifunction logic gate. The evaluation hardware can be controlled with simple GUI input switches while monitoring the output of two individual logic gates. Design collateral such as schematics, PCB layout, test reports, etc. are supplied in the same Strata interface to ease evaluation. This design serves as a vehicle for ON Semiconductor customers to understand and start taking advantage of the new Strata ecosystem. Other designs will follow such as switching and linear power supplies, offline converters, and a power ecosystem to fully evaluate most power converters. See the Strata webpage at www.onsemi.com/strata for more details!
