20	25 (26)	36 (40)	19.5 (36)

() : Dimensions of the CU series cylinders

ø4, ø6, ø8, ø10

ø12, ø16, ø20

Concentrates wiring and piping on one side

Allows more efficient installation, since four directions can be used freely.

Allows installation from four directions.

With counterbore for mounting

2 kinds of bodies are available. There is no protrusion for a mounting bolt.

Lateral mounting body/CUJB

Axial mounting body/CUJS

Series CUJ $\phi 4, \phi 6, \phi 8, \phi 10, \phi 12, \phi 16, \phi 20$

Two auto switches can be installed even for a 4 mm stroke.*

* $\phi 12$ to $\phi 20$ are available starting from a 5 mm stroke.

Solid state switch
D-F8□

Easy seal replacement

Seals can be replaced easily by just removing the rod cover ($\phi 4$ to $\phi 10$) or retaining ring ($\phi 12$ to $\phi 20$).

$\phi 4$ to $\phi 10$

$\phi 12$ to $\phi 20$

$\phi 4, \phi 6, \phi 8, \phi 10$

With boss (h9)

Centring can be done easily.

Clean room compliant Clean Series (except $\phi 4$)

Series CUJ 10- 11-

Relief port (10-)
Vacuum port (11-)

$\phi 12, \phi 16, \phi 20$

Standard equipment with damper

RoHS compliant

Applications

Short pitch mounting is possible.

Pitch Dimensions
(Without Magnet) (mm)

Bore size	E
4	10 Note 1)
6	13 Note 1)
8	13 Note 1)
10	13.5 Note 1)
12	17
16	21
20	25

Note 1) Body width dimensions have plus tolerances, so E dimensions should also be designed for plus tolerances. ($\phi 4$ to $\phi 10$ only)

Note 2) Refer to page 18 for built-in magnet.

Lowering the centre of gravity when using an external guide

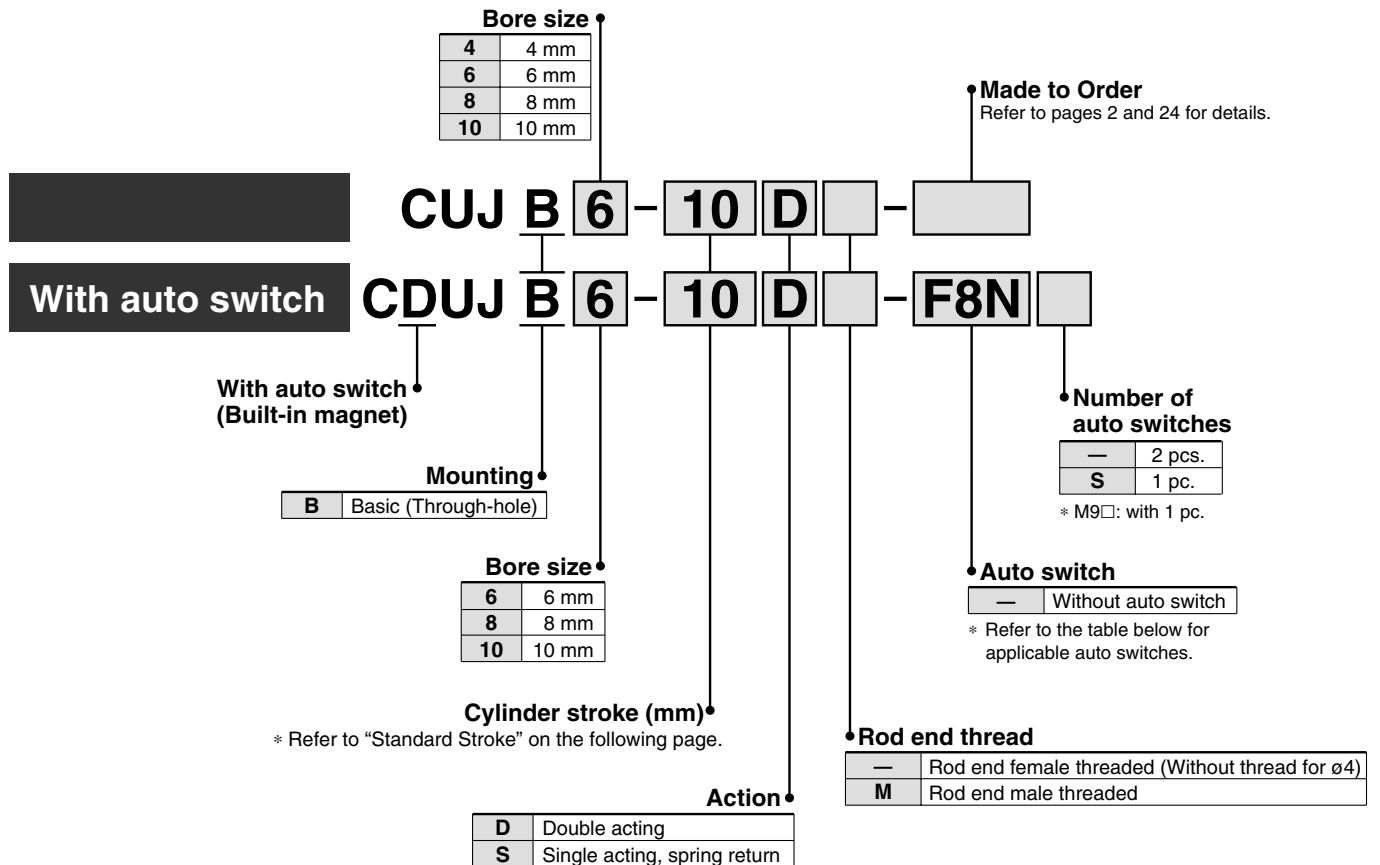

* Illustration shows an example of lateral mounting. (CUJB12 to 20)

Mini Free Mount Cylinder

Series CUJ

ø4, ø6, ø8, ø10

How to Order

Built-in Magnet Cylinder Model

In the case of a built-in magnet without auto switch, the symbol for the auto switch is "—".
(Example) CDUJB8-15DM

Applicable Auto Switches/Refer to pages 21 through to 23 for additional information on auto switches.

Type	Special function	Electrical entry	Indicator light	Wiring (Output)	Load voltage		Auto switch model		Lead wire length (m) *				Pre-wired connector	Applicable load				
					DC	AC	Electrical entry		0.5 (Nil)	1 (M)	3 (L)	5 (Z)						
							Perpendicular	In-line										
Solid state switch	—	Grommet	Yes	3-wire (NPN)	24 V	5 V, 12 V	—	—	M9N	●	—	●	○	○	IC circuit	Relay, PLC		
								—	F8N	●	—	●	○	○				
				—	M9P	●	—	●	○	○	○

* Lead wire length symbols: 0.5 m — (Example) M9NW
 1 m M (Example) M9NWM
 3 m L (Example) M9NWL
 5 m Z (Example) M9NWZ

* Auto switches marked with "○" are produced upon receipt of order.

Note 1) For the 2-colour indication type, use caution on hysteresis. Refer to page 19, "Auto Switch Hysteresis" prior to use.

Note 2) Refer to pages 21 through to 23 for detailed auto switch specifications.

* Refer to "Best Pneumatics" catalogue for further information on auto switches with pre-wired connector.

* Auto switches are included, (but not assembled).

Specifications

Single Acting, Spring Return

Without magnet

Built-in magnet

Rod end male threaded

Component Parts

No.	Description	Material	Note
1	Cylinder tube	Aluminum alloy	Hard anodized
2	Rod cover	Copper alloy	Electroless nickel plated
3	Piston	Without switch Stainless steel	
		With switch Aluminum alloy	Chromated
4	Piston rod	Stainless steel	
5	Seal retainer	Aluminum alloy	Chromated (CUJB4 only)
6	Magnet retainer	Aluminum alloy	Chromated
7	Return spring	Piano wire	
8	Bronze element	Sintered metallic BC	
9	Magnet	—	
10	Rod end nut	Iron	Nickel plated
11	Piston seal	NBR	
12	Rod seal	NBR	
13	Tube gasket	NBR	

Replacement Parts: Seal Kit Double Acting

Bore size (mm)	Kit no.	Contents
4	CUJB4-PS	Set of ⑪, ⑫, ⑬ and grease pack.
6	CUJB6-PS	
8	CUJB8-PS	
10	CUJB10-PS	

* Seal kit ⑪ to ⑬ comes as a set. Use the kit number for each bore size.

Single Acting, Spring Return

Bore size (mm)	Kit no.	Contents
4	CUJB4-S-PS	Set of ⑪ and grease pack.
6	CUJB6-S-PS	
8	CUJB8-S-PS	
10	CUJB10-S-PS	

* Use the following part number for ordering a grease pack only.
Grease part no.: GR-L-005 (5 g)

Dimensions: $\phi 4$ Double Acting; Single Acting, Spring Return

Without Magnet: CUJB4

Note) The position of the width across flats may not be parallel to the cylinder tube.

Rod end male threaded

Rod end nut part no. : NTJ-004

* Use caution especially when multiple cylinders are used in parallel such as stacking because the body width dimensions have plus tolerances. Contact SMC for a product with body width dimensions having different tolerances.

Series CUJ

Dimensions: $\phi 6$ Double Acting; Single Acting, Spring Return

Without Magnet: CUJB6

Note) The position of the width across flats may not be parallel to the cylinder tube.

Built-in Magnet: CDUJB6

Rod end male threaded

* Use caution especially when multiple cylinders are used in parallel such as stacking because the body width dimensions have plus tolerances.
Contact SMC for a product with body width dimensions having different tolerances.

Dimensions: $\phi 8$ Double Acting; Single Acting, Spring Return

Without Magnet: CUJB8

Note) The position of the width across flats may not be parallel to the cylinder tube.

Built-in Magnet: CDUJB8

Rod end male threaded

* Use caution especially when multiple cylinders are used in parallel such as stacking because the body width dimensions have plus tolerances. Contact SMC for a product with body width dimensions having different tolerances.

Series CUJ

Dimensions: $\phi 10$ Double Acting; Single Acting, Spring Return

Without Magnet: CUJB10

Note) The position of the width across flats may not be parallel to the cylinder tube.

Built-in Magnet: CDUJB10

Rod end male threaded

* Use caution especially when multiple cylinders are used in parallel such as stacking because the body width dimensions have plus tolerances.
Contact SMC for a product with body width dimensions having different tolerances.

Mounting

How to Mount: Through-hole mounting bolts are available.

How to Order: Add the "CUJB-" in front of the bolts to be used.

Example) CUJB-M5 x 30 ℓ * The order number at the left includes one mounting bolt and one spring washer.
(For CUJS20-5)

Axial mounting

Lateral mounting

* When mounting the cylinder, be sure to use the included spring washer.

Without Auto Switch (Without Magnet)

For Axial Mounting

Material: Structural steel

Cylinder model	A	B	Mounting bolt size
CUJS12-5	8.5	25	M4 x 25 ℓ

Auto Switch: Proper Mounting Position (Detection at Stroke End)

D-F8□

D-M9□/M9□W

• When detecting extended stroke end

• When detecting retracted stroke end

Bore size (mm)	D-F8□				D-M9□/M9□W			
	Double acting		Single acting		Double acting		Single acting	
	A	B	A	B	A	B	A	B
6								
8	1	1	1	1	3	7	3	7
10								
12	2	1	3.5	1	4	7	5.5	7
16	3	1	3	1	5	6.5	5	6.5
20	5	2	5	2	7	6	7	6

Note 1) Solid state switch D-M9□/M9□W: with 1 pc.

Note 2) Provide a clearance of 10 mm or more in addition to the above dimensions to prevent the lead wire interference.

Note 3) Adjust the mounting position after confirming the auto switch operation.

Auto Switch Mounting

• When tightening an auto switch mounting screw, use a watchmaker's screwdriver with a handle of approx. 5 to 6 mm in diameter.

Tightening Torque for Auto Switch Mounting Screw (N·m)

Auto switch model	Tightening torque
D-F8□	0.10 to 0.20
D-M9□	0.05 to 0.15
D-M9□W	

Operating Range

Auto switch model	Applicable bore size (mm)					
	6	8	10	12	16	20
D-F8□	2	2.5	2.5	3	4	4
D-M9□	2	2.5	2.5	2	3	3
D-M9□W	3	3.5	3.5	4	4	5

* This is a guideline including hysteresis, not meant to be guaranteed. (assuming approx. ±30% dispersion)
This will vary substantially depending on the ambient environment.

Caution on Proximity Installation

1. When cylinders with auto switches are adjacent to one another as shown in the figure below, provide a space between them of at least, the amount shown in the tables below.

If the space is not sufficient, the magnets in adjacent cylinders may cause the auto switches to malfunction.

Without Shielding Plate

Bore	ø6	ø8	ø10	ø12	ø16	ø20
L	19	19	19.5	21	25	29
d	6	6	6	4	4	4

With Shielding Plate

Bore	ø6	ø8	ø10	ø12	ø16	ø20
L	16	13.5	14	18	22	26
d	3	0.5	0.5	1	1	1

* The space can be reduced by attaching a shielding plate (steel plate 0.2 to 0.3 mm thick) to the side of the cylinder. In the case of a ø6 bore size, be sure to attach the shielding plate on Cylinder A (on the surface opposite to the switch groove).

Shown below is the dimensions of the separately sold shielding plate (MU-S025) for reference.

Material: Ferritic stainless steel, thickness: 0.3 mm

Possible to attach this on the cylinder since the reverse side is treated with glue.

2. In the case of ø6 bore size cylinders with auto switches, keep the auto switch groove side surface at least 2.5 mm away from a magnetic substance.

If a magnetic material gets closer within 2.5 mm, the auto switches may malfunction due to a drop in magnetic force.

* If this surface is to be used for mounting, a spacer composed of a non-magnetic substance (aluminum, etc.) is required as shown in the figure below.

Series CUJ

Auto Switch Specifications

Auto Switch Common Specifications

Type	Solid state switch
Leakage current	3-wire: 100 μ A or less 2-wire: 0.8 mA or less
Operating time	1 ms or less
Impact resistance	1000 m/s ²
Insulation resistance	50 M Ω or more at 500 VDC Mega (between lead wire and case)
Withstand voltage	1000 VAC for 1 minute (between lead wire and case)
Ambient temperature	-10 to 60°C
Enclosure	IEC60529 standard IP67
Standard	Conforming to CE Standards

Lead Wire Length

Lead wire length indication

(Example) D-M9BW **L**

Lead wire length

—	0.5 m
M ^{Note)}	1 m
L	3 m
Z	5 m

Note) 1 m (M): D-M9□W only

Solid state switch

Oilproof flexible heavy-duty cable indication

To designate solid state switches with flexible specifications, add "-61" after the lead wire length.

* Oilproof flexible heavy-duty cable is used for D-M9□ and D-M9□W as standard. There is no need to add the suffix -61 to the end of part number.

(Example) D-F8NL- **61**

Flexible specification

Auto Switch Hysteresis

The hysteresis is the difference between the position of the auto switch as it turns "on" and as it turns "off". A part of operating range (one side) includes this hysteresis.

Auto Switch Connections and Examples

Basic Wiring

Solid state 3-wire, NPN

(Power supplies for switch and load are separate.)

Solid state 3-wire, PNP

Solid state 2-wire

Examples of Connection to PLC (Programmable Logic Controller)

• Sink input specifications 3-wire, NPN

• Source input specifications 3-wire, PNP

Connect according to the applicable PLC input specifications, since the connection method will vary depending on the PLC input specifications.

2-wire

2-wire

Examples of AND (Serial) and OR (Parallel) Connection

• 3-wire

AND connection for NPN output (using relays)

AND connection for NPN output (performed with switches only)

OR connection for NPN output

The indicator lights will light up when both auto switches are turned ON.

2-wire with 2-switch AND connection

When two auto switches are connected in series, a load may malfunction because the load voltage will decline when in the ON state. The indicator lights will light up if both of the auto switches are in the ON state.

2-wire with 2-switch OR connection

(Solid state switch)
When two auto switches are connected in parallel, a malfunction may occur because the load voltage will increase when in the OFF state.

$$\begin{aligned} \text{Load voltage at ON} &= \text{Power supply voltage} - \text{Internal voltage drop} \times 2 \text{ pcs.} \\ &= 24 \text{ V} - 4 \text{ V} \times 2 \text{ pcs.} \\ &= 16 \text{ V} \end{aligned}$$

Example: Power supply is 24 VDC.
Internal voltage drop in auto switch is 4 V.

$$\begin{aligned} \text{Load voltage at OFF} &= \text{Leakage current} \times 2 \text{ pcs.} \\ &\quad \times \text{Load impedance} \\ &= 1 \text{ mA} \times 2 \text{ pcs.} \times 3 \text{ k}\Omega \\ &= 6 \text{ V} \end{aligned}$$

Example: Load impedance is 3 kΩ.
Leakage current from auto switch is 1 mA.

Solid State Switch: Direct Mounting Style D-M9N/D-M9P/D-M9B

Grommet

- 2-wire load current is reduced (2.5 to 40 mA).
- Flexibility is 1.5 times greater than the conventional model (SMC comparison).
- Using flexible cable as standard spec.

Caution

Operating Precautions

Fix the switch with the existing screw installed on the switch body. The auto switch may be damaged if an unspecified screw is used.

Series CUJ

Made to Order

Please contact SMC for detailed dimensions and specifications.

Heat Resistant Cylinder (−10 to 150°C)

-XB6

Air cylinder which changed the seal material and grease, so that it could be used even at higher temperature up to 150°C from −10°C.

How to Order

CUJ series standard model no. — XB6

Heat resistant cylinder •

Note 1) Be sure to use a non-lubricating air supply.

Note 2) Contact SMC for details on the maintenance intervals for this cylinder, which differs from those of the standard cylinder.

Note 3) In principle, it is impossible to make built-in magnet type and/or with auto switch.

Specifications

Applicable series	CUJ
Bore size	ø4, ø6, ø8, ø10
Ambient temperature range	−10°C to 150°C
Seals material	Fluororubber
Grease	Heat resistant grease (GR-F-005)
Specifications other than above and external dimensions	Same as standard type.

Warning Precautions

Be aware that smoking cigarettes, etc. after your hands have come into contact with the grease used in this cylinder can create a gas that is hazardous to humans.

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution,**” “**Warning**” or “**Danger.**” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC), Japan Industrial Standards (JIS)*1) and other safety regulations*2).

- * 1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
ISO 10218-1992: Manipulating industrial robots -Safety.
JIS B 8370: General rules for pneumatic equipment.
JIS B 8361: General rules for hydraulic equipment.
JIS B 9960-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
JIS B 8433-1993: Manipulating industrial robots - Safety.
etc.
- * 2) Labor Safety and Sanitation Law, etc.

 **Caution:** Operator error could result in injury or equipment damage.

 **Warning:** Operator error could result in serious injury or loss of life.

 **Danger :** In extreme conditions, there is a possibility of serious injury or loss of life.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.

2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.

3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.

2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalogue.

3. An application which could have negative effects on people, property, or animals requiring special safety analysis.

4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Auto Switches Precautions 1

Be sure to read this before handling.

Design and Selection

Warning

1. Check the specifications.

Read the specifications carefully and use this product appropriately. The product may be damaged or malfunction if it is used outside the specification range of load current, voltage, temperature or impact.

SMC will not, under any circumstances, assume responsibility for damage incurred when used outside the specification range.

2. Cautions for use in an interlock circuit

When an auto switch is used for an interlock signal requiring high reliability, devise a double interlock system to avoid trouble by providing a mechanical protection function, or by also using another switch (sensor) together with the auto switch. Also, perform periodic maintenance inspections and confirm proper operation.

3. Do not disassemble the product or make any modifications, including additional machining.

It may cause human injury and/or an accident.

Caution

1. Use caution regarding the length of time that an auto switch is ON at an intermediate stroke position.

When an auto switch is placed at an intermediate position of the stroke and a load is driven at the time the piston passes, the auto switch will operate, but if the speed is too great, the operating time will be shortened and the load may not operate properly. The maximum detectable piston speed is:

$$V \text{ (mm/s)} = \frac{\text{Auto switch operating range (mm)}}{\text{Load operating time (ms)}} \times 1000$$

Caution

2. Wiring should be kept as short as possible.

Although the wire length should not affect the function of the switch, use a wire length of 100 m or less.

Even when the length is 100 m or less, the longer the wire is, the greater the possibility of influence from external noise.

To deal with noise when the wire length is long, we recommend installation of a ferrite core at either end of the lead wire.

Due to the nature of their construction, contact protection boxes are not required for solid state auto switches.

3. Do not use a load that generates surge voltage. If a surge voltage is generated, the discharge occurs at the contact, possibly resulting in the shortening of product life.

When a load such as a relay which generates surge is driven, use a switch with a built-in surge absorbing element.

4. Use caution when multiple cylinders/actuators are used close to each other.

When two or more cylinders/actuators with auto switches are lined up in close proximity to each other, magnetic field interference may cause the switches to malfunction. Maintain a minimum cylinder/actuator separation of 40 mm. (When an allowable interval is specified for each cylinder and actuator series, use the indicated value.)

By using a magnetic shielding plate (MU-S025) or commercially available magnetic shielding tape, it may be possible to reduce the interference caused by magnetism.

5. Mount a switch at the centre of the operating range.

Adjust the mounting position of an auto switch so that the piston stops at the centre of the operating range (the range in which a switch is ON). (The mounting positions shown in the catalogue indicate the optimum position at the stroke end.) If mounted at the end of the operating range (around the borderline of ON and OFF), the operation will be unstable, and the life of reed switches may be shortened.

Auto Switches Precautions 2

Be sure to read this before handling.

Design and Selection

⚠ Caution

6. Use caution regarding the internal voltage drop of a switch.

- If auto switches are connected in series as shown below, take note that there will be a large voltage drop because of internal resistance in the light-emitting diodes. (Refer to internal voltage drop in the auto switch specifications.)

[The voltage drop will be “n” times larger when “n” auto switches are connected.]

Even though an auto switch operates normally, the load may not operate.

- Similarly, when operating below a specified voltage, it is possible that the load may be ineffective even though the auto switch function is normal. Therefore, the formula below should be satisfied after confirming the minimum operating voltage of the load.

$$\text{Supply voltage} - \text{Internal voltage drop of auto switch} > \text{Minimum operating voltage of load}$$

<2-wire>

Generally, the internal voltage drop will be greater, so use caution. Also, note that a 12 VDC relay is not applicable.

7. Use caution regarding the leakage current.

<2-wire>

With a 2-wire auto switch, current (leakage current) flows to the load to operate the internal circuit even when in the OFF state.

$$\text{Current to operate load (OFF condition)} > \text{Leakage current}$$

If the condition given in the above formula is not met, it will not reset correctly (stays ON). Use a 3-wire switch if this specification cannot be satisfied.

Moreover, leakage current flow to the load will be “n” times larger when “n” auto switches are connected in parallel.

8. Ensure sufficient space for maintenance activities.

When designing an application, be sure to allow sufficient space for maintenance and inspection.

9. Use caution when mounting multiple units.

When the number of auto switches mounted is “n”, this represents the number of auto switches that can physically be mounted with the cylinder/actuator.

As the detection interval in this situation is determined by the mounting construction of the auto switch and the housing dimensions, it may not always be possible to mount the switches at the desired interval and/or setting position.

10. Limitations on possible detection positions

Depending on the mounting hardware of the cylinder/actuator, physical interference may make it impossible to mount the auto switch in some positions or on some surfaces (lower surface of foot bracket, etc.)

For the auto switch mounting position, check carefully to ensure there is no interference with the cylinder/actuator mounting bracket (trunnion, reinforcing ring etc.).

11. Use the proper combinations.

The auto switch is adjusted so as to operate properly when used with SMC cylinders/actuators.

Take note that improper mounting, mechanical changes in mounting conditions, and use of cylinders/actuators not made by SMC may result in malfunction.

Mounting and Adjustment

⚠ Caution

1. Do not drop or bump.

Do not drop, bump, or apply excessive impacts (1000 m/s² or more while handling. Although the body of the auto switch may not be damaged, the inside of the auto switch could be damaged and cause a malfunction.

2. Mount auto switches using the proper tightening torque.

When a switch is tightened beyond the fastening torque range, the mounting screws, auto switch mounting brackets or auto switch may be damaged.

On the other hand, tightening below the fastening torque range may allow the auto switch to slip out of position.

3. Do not carry a cylinder/actuator by the auto switch lead wires.

Never carry a cylinder/actuator by its lead wires. This may not only cause broken lead wires, but it may cause internal elements of the auto switch to be damaged by the stress.

4. Do not mount the auto switch to the main body with anything other than the included set screw. Using screws other than those indicated may cause damage to the auto switch.

Auto Switches Precautions 3

Be sure to read this before handling.

Wiring

⚠ Caution

1. Confirm proper insulation of wiring.

Be certain that there is no faulty wiring insulation (contact with other circuits, ground fault, improper insulation between terminals, etc.). Damage may occur due to excess current flow to a switch.

2. Do not wire together with power lines and/or high voltage lines.

Avoid wiring in parallel with power lines and/or high voltage lines or using inside the same wire tubing. Wire separately, otherwise control circuits including auto switches can malfunction due to noise.

3. Avoid repeatedly bending or stretching the lead wires.

Broken lead wires will result from repeatedly applying bending stress or stretching force to the lead wires.

Stress and tensile force applied to the connection between the cable and auto switch increases the possibility of disconnection.

Fix the cable in the middle so that it is not movable in the area where it connects with the auto switch.

4. Be sure to connect the load before power is applied.

<2-wire>

If the power is turned on when an auto switch is not connected to a load, the switch will be instantly damaged because of excess current.

It is the same as when the 2-wire brown cord (+, output) is directly connected to the (+) power supply terminal.

5. Do not allow short-circuiting of loads.

All D-M9□ and PNP output switch models do not have a built-in short circuit prevention circuit. If a load is short circuited, the auto switch will be instantly damaged.

Use caution to avoid reverse wiring with the brown power supply line and the black output line on 3-wire switches.

6. Avoid incorrect wiring.

1) If connections are reversed on a 2-wire auto switch, the auto switch will not be damaged by a protection circuit, but the auto switch will always stay in an ON state. However, it is still necessary to avoid reversed connections, since the auto switch could be damaged by a load short circuit in this condition.

2) If connections are reversed (power supply line (+) and power supply line (-)) on a 3-wire switch, the switch will be protected by a protection circuit. However, if the power supply line (+) is connected to the blue wire and the power supply line (-) is connected to the black wire, the auto switch will be damaged.

7. When the cable sheath is stripped, confirm the stripping direction. The insulator may be split or damaged depending on the direction. (D-M9□ only)

Recommended Tool

Description	Model no.
Wire stripper	D-M9N-SWY

* Stripper for a round cable (ø2.0) can be used for a 2-wire cable.

Auto Switches Precautions 4

Be sure to read this before handling.

Operating Environment

Warning

1. Never use in the presence of explosive gases.

The construction of our auto switches does not make them explosion-proof. Never use them in the presence of an explosive gas, as this may cause a serious explosion. Consult SMC for ATEX directive products.

Caution

1. Do not use in an area where a magnetic field is generated.

Auto switches will malfunction or magnets inside cylinders/actuators will become demagnetized.

2. Do not use in environments where the auto switches are under water or constantly exposed to water.

Although the switches satisfy the IEC standard IP67 structure, do not use switches in applications where it will be continually exposed to water splash or spray. Poor insulation or swelling of the potting resin inside the switches may cause a malfunction.

3. Do not use in environments with oil or chemicals.

Consult with SMC if the auto switches will be used in an environment with coolants, cleaning solvents, various oils or chemicals. If the auto switches are used under these conditions for even a short period of time, they may be adversely affected by improper insulation, a malfunction due to swelling of the potting resin, or hardening of the lead wires.

4. Do not use in an environment with temperature cycles.

Consult with SMC if the switches are to be used where there are temperature cycles other than normal temperature changes, as they may be adversely affected internally.

5. Do not use in locations where surges are generated.

When there are units (solenoid type lifters, high frequency induction furnaces, motors, radio equipment, etc.) which generate a large amount of surge or electromagnetic waves in the area around cylinders/actuators with solid state auto switches, this may cause deterioration or damage to the switches. Avoid sources of surge generation and crossed lines.

Caution

6. Avoid accumulation of iron debris or close contact with magnetic substances.

When a large amount of ferrous debris such as machining chips or spatter is accumulated, or a magnetic substance (something attracted by a magnet) is brought into close proximity to the cylinder/actuator with an auto switch, it may cause the auto switches to malfunction due to a loss of the magnetic force inside the cylinder.

7. Consult with SMC concerning water resistance, elasticity of lead wires, and use at welding sites.

8. Do not use in direct sunlight.

9. Do not mount the product in locations where it is exposed to radiant heat.

Maintenance

Warning

1. Removal of equipment, and supply/exhaust of compressed air

Before any machinery or equipment is removed, first ensure that the appropriate measures are in place to prevent the fall or erratic movement of driven objects and equipment, then cut off the electric power and reduce the pressure in the system to zero. Only then should you proceed with the removal of any machinery and equipment.

When machinery is restarted, proceed with caution after confirming that appropriate measures are in place to prevent cylinders/actuators from sudden movement.

Caution

1. Perform the following maintenance periodically in order to prevent possible danger due to unexpected auto switch malfunction.

1) Securely tighten the switch mounting screws.

If the screws become loose or the mounting position is dislocated, retighten screws securely after readjusting the mounting position.

2) Confirm that there is no damage to lead wires.

To prevent faulty insulation, replace switches or repair lead wires if damage is discovered.

3) Checking the green light-up of 2-colour indication auto switches

Confirm that the green LED light turns on and operation stops where it is set. If the red LED light turns on and operation stops, the mounting position is incorrect. Re-install in a new position so that the green LED lights up.

Series CUJ

Specific Product Precautions 1

Be sure to read this before handling. Refer to back page 1 for Safety Instructions, the back of pages 2 through to 5 for Auto Switches Precautions, and "Pneumatics for Handling Pneumatic Devices" (M-03-E3A) for Actuators Precautions.

Design

Warning

Do not use an exhaust centre. If its use cannot be avoided, use an lurching-prevention circuit, or consult SMC.

Mounting

Caution

1. When mounting a mini free mount cylinder, tighten the bolts with the proper tightening torque.

Applicable bore size (mm)	Bolt	Proper tightening torque (N·m)*
4	M2.5 x 0.45	0.54 ±20% (0.432 to 0.648)
6	M3 x 0.5	1.06 ±20% (0.848 to 1.272)
8		
10		
12	M4 x 0.7	3.27 ±20% (2.61 to 3.92)
16		
20	M5 x 0.8	6.6 ±20% (5.28 to 7.92)

* Torque coefficient: 0.2

2. Mounting the bolt from the rod side with a $\phi 12$ to $\phi 20$ lateral mounting body may result in interference with the workpiece. Use an axial mounting body.

3. Use caution especially when multiple cylinders are used in parallel such as stacking because the dimensions of the body's width have plus tolerances. Contact us for information on a product with body width dimensions having different tolerances. ($\phi 4$, $\phi 6$, $\phi 8$, $\phi 10$ only)

4. If the cylinder's mounting surface is not sufficiently flat, it may result in malfunction. We recommend that the cylinder's mounting surface flatness should be 1/100 mm or less.

Allowable Kinetic Energy

Caution

When driving an inertial load, operate a cylinder with kinetic energy within the allowable value. The range in the chart below that is delineated by bold solid lines indicates the relationship between load mass and maximum driving speeds.

Bore size (mm)	4	6	8	10	12	16	20
Piston speed (m/s)	0.05 to 0.5						
Allowable kinetic energy (J)	3.8×10^{-3}	6.25×10^{-3}	9.35×10^{-3}	12.5×10^{-3}	0.030	0.053	0.077

Single Acting Cylinders

Caution

1. Do not move the load with the thrust (spring reaction force) on the cylinder retracting side. Otherwise, it will cause poor stroke or malfunction.

2. Do not remove the element or plug.

Series CUJ

Specific Product Precautions 2

Be sure to read this before handling. Refer to back page 1 for Safety Instructions, the back of pages 2 through to 5 for Auto Switches Precautions, and "Pneumatics for Handling Pneumatic Devices" (M-03-E3A) for Actuators Precautions.

Selection

Strictly observe the limiting range of lateral load on a piston rod. (Refer to the graphs below.) If this product is used beyond the limits, it may shorten the machine life or cause damage.

Double Acting, Female Threaded, Without Magnet (Without Auto Switch)

Double Acting, Female Threaded, With Magnet (With Auto Switch)

Caution

Adjust the cylinder drive speed by installing a speed controller, beginning at a low speed and gradually adjusting to the specified speed.

Lubrication

Caution

Lubrication to the non-lube type cylinders

Lubrication is not necessary since these cylinders are lubricated at the factory.

However, when you lubricate the cylinder, use synthetic oil (polyalphaolefin oil or equivalent). In that case, continue to lubricate the cylinder. Otherwise, loss of the initial lubricant may result in malfunction.

* Oil lubrication is not possible with the clean series.

Series CUJ

Specific Product Precautions 3

Be sure to read this before handling. Refer to back page 1 for Safety Instructions, the back of pages 2 through to 5 for Auto Switches Precautions, and "Pneumatics for Handling Pneumatic Devices" (M-03-E3A) for Actuators Precautions.

Caution on Mounting Speed Controllers and Fittings

⚠ Caution

Since the cylinder port size of M3 x 0.5 (M5 x 0.8 for $\phi 20$ only) is used, use the cylinder series models listed below when connecting speed controllers and fittings directly to cylinders.

- After manually tightening speed controllers and fittings, tighten approximately a quarter turn (a 1/6 turn for $\phi 20$ only) more using a tightening tool. In cases where there are gaskets in two places such as universal elbows, universal tees, etc., double the additional tightening to a half turn (a 1/3 turn for $\phi 20$ only). If screws are tightened excessively, air leakage may result due to broken threads or a deformed gasket. If screws are tightened insufficiently, looseness and accompanying air leakage are likely to occur.
