

POWER RESISTOR - PR01

FEATURES

- Metal film;
- High power in small package;
- Different leads for different applications;
- Several forming styles are available;
- Defined interruption behavior (fusing time);
- Nonflammable lacquer;
- High stability, reliability and uniformity characteristics;
- Several packing and taping configurations;
- Precision tolerance is available (1%);
- Good performance for pulse applications.

MARKET SEGMENTS AND APPLICATIONS

Industry sector	Application segment	End-user equipment
Industrial	Bower	Power supplies
Industrial	Fower	Motor speed controls
Telecom	Data Communication	Line protection resistor
Telecom	Data Communication	Power supplies
		Amplifiers, Color monitor
	Sound & Vision	Television,
Consumer		Video cassette recorder
	Kitchen Appliances	Blender
	Lighting	Ballast equipment
		Dashboard electronics
		Lighting equipment
Automotive	Electronic Systems	Window/mirror steering
		ABS system, Alarm system
		Airbag, Electronic fuel injection

TECHNOLOGY

A homogenous film of metal alloy is deposited on a high grade ceramic body. After a helical groove has been cut in the resistive layer, tinned connecting wires of electrolytic copper or copper-clad iron are welded to the end-caps. The resistors are coated with a red, nonflammable lacquer, which provides electrical, mechanical and climatic protection. The encapsulation is resistant to all cleaning solvents in accordance with "MIL-STD-202E, method 215" and "IEC 60068-2-45".

QUICK REFERENCE DATA

Cu / Fe		
••••••	Cu lead	
0.22Ω to $1M\Omega$	1 Ω to 1M Ω

350V		
$\sqrt{Pn x R}$		
ation IEC 60115-1 and 60115-4		
55/15	55/56	
±5% +0.1Ω ±3% +0.1Ω	±1% +0.1Ω ±1% +0.1Ω	

Note:

1- Maximum rated voltage is the "Limiting voltage".

MECHANICAL DATA

^{*} Max. displacement between any two resistors. Dimensions in mm.

Table 1

Туре	Α	L1max	L2 max	D max	B1-B2	φd	Mass per 100 units (g)
						0.58 ± 0.05 Cu*	24
PR01	52 +1.5/-0	6.5	8.5	2.5	± 1.2	0.8 ± 0.03 Cu	33
						0.6 ± 0.05 FeCu	27

* Preferred type Dimensions in mm

MOUNTING

The resistors are suitable for processing on automatic insertion equipment, cutting and bending machines.

ELECTRICAL CHARACTERISTICS

DERATING

The power resistor that the resistor can dissipate depends on the operating temperature

Maximum dissipation (Pmax.) in percentage of rated power as a function of ambient temperature (Tamb.).

APPLICATION INFORMATION FOR HOT-SPOT AND SOLDER-SPOT

Solder-spot

Fig. 2 - ϕ 0.58mm Cu – leads Minimum distance from resistor body to PCB=1mm Temperature rise (Δ T) at the lead end (Soldering point) as a function of dissipated power at various leads lengths after mounting.

Solder-spot

Fig. 4 - ϕ 0.6mm FeCu – leads Minimum distance from resistor body to PCB=1mm Temperature rise (Δ T) at the lead end (Soldering point) as a function of dissipated power at various leads lengths after mounting.

Note: The maximum permissible hot-spot temperature is 205°C.

PR01

PULSE LOADING CAPABILITIES

Fig. 6 - Pulse on a regular basis, maximum permissible peak pulse voltage (^Vmax) as a function of pulse duration (ti).

INTERRUPTION CHARACTERISTICS

The graph based on measured data under constant voltage conditions; these data may deviate according to the application.

Fig. 7 - Time to interruption as a function of overload power for range: $0R22 \le Rn < 1R$.

Fig. 8 - Time to interruption as a function of overload power for range: $1R \le Rn < 15R$.

Fig. 9 - Time to interruption as a function of overload power for range: $16R \le Rn < 560R.$

MARKING

The nominal resistance and tolerance are marked on the resistor using four or five colored bands in accordance with IEC publication 60062 "color code for fixed resistors".

Standard values of nominal resistance are taken from the E24/E96 series for resistors with a tolerance of $\pm 5\%$ or 1%. The values of the E24/E96 series are in accordance with "IEC publication 60063".

ORDERING INFORMATION

Table 2. Ordering code indicating resistor type and packaging							
TYPE		EAD Ø (mm) TOL (%)	ORDERING CODE 23xx xxx xxxxx				
	LEAD ∅ (mm)		BANDOLIER IN	BANDOLIER ON REEL			
			STRAIGHT LEADS				
			52 mm 52 mm		52 mm		
			5000 units	1000 units	5000 units		
PR01	Cu 0.58	1	22 196 1xxxx	06 191 2xxxx	06 191 5xxxx		
		5	5	22 193 14xxx	06 197 53xxx	06 197 23xxx	

Note: For formed types see "Formed Types Specification"

ORDERING CODE

- The resistors have a 12 digit ordering code starting with 23
- The subsequent 6 or 7 digits indicate the resistor type and packaging, see table 2.
- For 5% tolerance the remaining 3 digits indicate the resistance value;
 - The first 2 digits indicate the resistance value.
 - The last digit indicates the resistance decade in accordance with table 3.
- For 1% tolerance the remaining 4 digits indicate the resistance value;
 - The first 3 digits indicate the resistance value.
 - The last digit indicates the resistance decade in accordance with table 3.

Table 3. Last digit of 12NC		
RESISTANCE DECADE (5%)	RESISTANCE DECADE (1%)	LAST DIGIT
0.22 to 0.91Ω	-	7
1 to 9.1Ω	1 to 9.76Ω	8
10 to 91Ω	10 to 97.6Ω	9
100 to 910Ω	100 to 976Ω	1
1 to 9.1kΩ	1 to 9.76kΩ	2
10 to 91kΩ	10 to 97.6kΩ	3
100 to 910kΩ	100 to 976k Ω	4
1MΩ	1ΜΩ	5

Example:

The ordering code for resistor type PR01 with Cu leads and a value of 150Ω 5%, supplied on a bandolier of 1000 units in ammopack, is: 2306 197 53151.

PACKAGING

TESTS AND REQUIREMENTS

Essentially all tests are carried out in accordance with the schedule of "IEC publication 60115-1", category LCT/UCT/56 (rated temperature range: Lower category temperature, upper category temperature; damp heat, long term, 56 days). The testing also covers the requirements specified by EIA and EIAJ.

The tests are carried out in accordance with IEC publication 60068-2, "Recommended basic climatic and mechanical robustness testing procedure for electronic components" and under standard atmospheric conditions according to "IEC 60068-1", subclause 5.3.

In Table 6 the tests and requirements are listed with reference to the relevant clauses of "IEC publications 60115-1 and 60068-2"; a short description of the test procedure is also given. In some instances deviations from the IEC recommendations were necessary for out method of specifying.

All soldering tests are performed with mildly activated flux.

IEC 60115-1 CLAUSE	IEC 60068-02	TEST		REQUIR	EMENTS
	TEST METHOD		PROCEDURE	PR01 5%	PR01 1%
4.4.1		Visual examination		No holes; clea damage	an surface no
4.4.2		Dimensions (outline)	gauge (mm)	See table 1
